Hi, everybody!

I'm still looking for MagicMac (PowerPC). If anybody out there wants to
sell his or her almost newer version - let me know.

Stefan.

Please email to: holland@hrz1.hrz.th-darmstadt.de

4. PC to st image disk

Newsgroup: comp.sys.atari.st
Date: 1997-07-01 00:00:00 UTC
From: 408357@ingtz.unizar.es
Message-ID: <408357-2708562138350001@m190026.unizar.es>
Source record: 120183

Hi...
I can format disks in a St but PC rejects them if they are in a different format than 720kb, but many games for Pacifist that could be extracted using STimage or Lsaextract needs other disk formats (81 tracks, 10 sectors or something like this). I can do that using an st Formater (using 100track) but disk are rejected by dos and by Stimage (it says " undefined disk error").
Is out there any Pc program that allows me to format disks selecting the number of tracks and sectors?
In other case: how to format disks in my St to use them on Stimage (in more than the 720kb mode)?
I'm sorry for my english...
Thank you .
Fernando.

What are the names of the Tramiels that were involved with Atari?

As far as I can remember, there was: Jack, Sam, Leonard...

--

Any email sent to my address will bounce, however I can now be contacted
via an intermediary : gem at tos pl net. I would like to apologise to the
genuine respondents that this may inconvenience.

--

Quote For The Month:

(From an infomercial currently playing on New Zealand Television)

"What do our customers tell us about using the Pure Water Distiller?"
"... [The Water] is so easy to drink, compared to other water"

Yeah, I agree. Whenever I want to drink normal water, I have to consult a
_really_big_ instruction manual - and even then, it takes me half an hour
before I can start to drink, because there aren't any pictures showing me
how. But with the Pure Water Distiller, they include a simple one-page
leaflet - WITH PICTURES!! - that show me how to drink water...

Message-ID: <5pas6odnj1@nef.ens.fr>
Source record: 120186

Hello,

Dans l'article <33B77B77.815C0F42@sunderland.ac.uk>,
Michael Clemmetsen , <michael.clemmetsen@sunderland.ac.uk> a crit :
Hi,

Does anyone know where I can get a Canon BJ-200ex compatible printer
driver for Calamus S? The BJ compatible drivers that come with Calamus S
do not have support for A4 size pages which I need.

I don't know for S, but with SL 96 they are drivers only for BJ-800
and BJ-300, all with A4 support.
Try may be to contact MGI, the new society that owns Calamus' rights -
their WWW address is:

http://www.mgisoft.com - nothing wrote about SL, but they do it.

Well, try HowardC@mgisoft.com for e-mail (I found it in my mailbox)

if not, try adequate systems may be: http://www.geld.com/as

u > I guess that it would be better with a shell. But is there
u > another way to change it?

There are other programs and accessories which replace the CON:
driver with a window (Geneva for one). The window usually stays
visible after the program ends.

If you have Pure C, you could use the Compile/Execute menu item and
recover the screen image using the escape key.

> validate the option "pause after TOS/TTP programs".
I'd say all alternative desktops offer this, not only Thing ;)

> (the file TOS2GEM.PRG must have been placed in the AUTO folder first).
No, it works without TOS2GEM as well. The output will not be in a GEM
window, then, and can't be reviewed, but the pause option is not
influenced by the absence of T2G.

Ciao

Thomas

I would like to know if any one has any info on this up grade. I can't get
it to work.
Is there any motherboard modifications that needs to be done?

Thank You,
Randy

13. ST to Linux link

Newsgroup: comp.sys.atari.st
Date: 1997-07-01 00:00:00 UTC
From: bwmott@unity.ncsu.edu
Message-ID: <5pbji2$hn1@uni00nw.unity.ncsu.edu>
Source record: 120192

ST Users,

I'd like to get a small program that let's me access files on my
Linux machine from my Atari Mega ST 2. I've looked around on the net,
however, I haven't found anything yet.

I did find a program on the umich archive that let's me access the
files on a PC running DOS (ghostlnk I believe).

Does anyone know of anything that'll let me do this? Or does anyone
have the source code to ghostlnk or something similar to it that
I can have so I can write my own?

Thanks,
Bradford W. Mott

P.S. Please respond via email

14. FS Atari stuff, Gameboy/Lynx stuff, books

Newsgroup: comp.sys.atari.st
Date: 1997-07-01 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.070197.194239.83@wxs1-2.worldaccess.nl>
Source record: 120193

This is the July 1st version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Deep Space (2 disks, Psygnosis)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Jambala, the Seven Gates of (Thalion, DS disk version)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect
printer to
get it to work, does not work on Falcon, alas)
Monster Business (platform game, Eclipse design)
+Obliterator (2 disks, Psygnosis)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by
Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the
ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE

FORMAT, WORKS ON ST AS WELL AS AMIGA)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten label by ES of TEX, ST only): 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of
TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer.

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Ninja Gaiden
Rampage

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ----------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

You could run them in a window using, viz., VT52.PRG or TOS2GEM.

Most programs contain a parameter option for halting output at the end of
ascreen "page" until "any key" is pressed. You can find what the parameter is
by running with -h or help. (but, of course, the output from this will
disappear from your screen if you don't catch it!)

19. Creating .ST images (for PacifiST)

Newsgroup: comp.sys.atari.st
Date: 1997-07-01 00:00:00 UTC
From: mccallum@earth.inwave.com
Message-ID: <mccallum-ya023180000107971608160001@news.alpha.net>
Source record: 120198

Alright, here's whats puzzling me...

I have forseen the future of STs and it is hopefully PacifiST (coz it's gift/shareware). Unfortunately the two machines I have now are a mac and a 4meg STE (which runs my bbs)... So with the prices of PC's dropping more and more, my mac becoming more and more obsolete, and my ST games collection groaning under the weight of dust and old disks failing left and right...(get on with it man!)

Is there an ST program around that would let me start converting my old favorites to/from Pacifist's *.ST format and *.ST to .MSA? Ready for that day when I have to... oh, i can't say it... buy a PC! there...

- Andy ;)

Yes I get it too, but only on Yahoo - I seem to be able to pick the
next page of results on Alta Vista from the row of page numbers along
the bottom.

Solutions anyone?

Cheers

25. POPwatch 2.02 released

Newsgroup: comp.sys.atari.st
Date: 1997-07-01 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <69864135_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 120204
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

Unfortunately a big bug was discovered after the release of POPwatch 2.00 :(

The incoming and outgoing paths can sometimes be corrupted by POPwatch
adding wildcards (*.*) to the end.

This causes sending and receiving of email to fail.

POPwatch 2.02 fixes this bug and is available from my web site.

I apologise for any inconvenience that this has caused!!

If you are using an earlier version of POPwatch, I strongly suggest that you
upgrade to 2.02.

Regards, Gary

mlake@melake.erols.com (Marshall Lake) cried out in anguish:

M > I have been having problems with SCSI devices attached to my
M > TT via the SCSI port and I'm looking for any help or advice
M > that anyone can give me.

Change cables. The best one I have found (so far) comes with the
Syquest EZ135.

I find it hard to believe, but cables vary an amazing amount in
their ability to deal with the stuff that travels in them.

ben@imperial.co.uk wrote:
: On my Falcon I currently have MiNT v1.12, MiNTOS and MiNTNET

MiNT 1.12 is old and definitely not recommended.

: installed. The memory on my Falcon is a bit tight as it onlt
: has 4Meg of RAM. Until I get around to buying more memory I
: thought I would install MiNT 1.14 as this offers virtual mempory.

I don't think you will get far, I can't get the VM going properly on my
TT, and I have never heard of anyone who has it working on a Falcon.

: The problem is that if I replace MiNT 1.12 with 1.14 when MiNT
: runs init a continuous message appears on the screen:

: init: Acess Denied.

That is happening because init does not have execute permissions enabled.
The reason you were not seeing the error before was due to a bug in MiNT
1.12 which allowed things to be executed even when they were not
executable.

The solution is to turn on execute permissions for init.

Hi Guentcho !
actually, there is ! Use the alternative desktop Thing 1.09. In the
Options menu, select "preferences". Then, in the "system" sub-window,
validate the option "pause after TOS/TTP programs".

(the file TOS2GEM.PRG must have been placed in the AUTO folder first).

Bye.

t> down to the ST's standard 15khz? Thanks in advance...! :)

As Jo said, games that are GEM'd are generally Ok - I forgot about those. But if you'd want to play thelikes of Obsession or H.E.R.O. for example, you can forget it.

I don't think the issue's so much the screen resolution as the location of the screen. The graphics are redirected through the VME port and not through the monitor port. If the game hits the hardware, the hardware will be somewhere else IYSWIM...

Even GEM'd programs are incompatible sometimes. I tried K-Word the other day and it was a waste of time...

> Mega ST, TOS 1.02

If the program takes a command line (TTP Tos-Takes-Parameters), try
adding ">logfile.dat" to the command line.

This will redirect standard output to the disc file called "logfile.dat".

This requires either the shell (GEM desktop, for example) redirects the
output for the app. Or, if the app was written in a HLL (High Level
Language) the app could do so itself in its startup code.

OR:

You could try running the app from within a shell of some sort that has a
recall buffer, which contains the last X lines of output. This will allow
you to review the output after the app has exited.

(It has been quite a while since I last used a Mega ST [4MB with 1.02
ROMs, in 1992/1993-ish] so these ideas may not be ideal for your current
circumstances)

Quote For The Month:

(From an infomercial currently playing on New Zealand Television)

"What do our customers tell us about using the Pure Water Distiller?"
"... [The Water] is so easy to drink, compared to other water"

Yeah, I agree. Whenever I want to drink normal water, I have to consult a
_really_big_ instruction manual - and even then, it takes me half an hour
before I can start to drink, because there aren't any pictures showing me
how. But with the Pure Water Distiller, they include a simple one-page
leaflet - WITH PICTURES!! - that show me how to drink water...

I have 4 256k simms which I have had a while and I really want them to go to a home rather than just being wasted so if you have a 512k STe and you want 1024k then take up this offer:

£1 for 2 simms inc P&P
£1.50 for 4 simms inc P&P

Only in UK though.

Usually 1.0 came on 6 chips, so your STFM probably has 6 sockets. If you have the choice between a 2 chip or a 6 chip version, you'd probably better get the same as what's in your ST already. The 2 chip version will go in, but there's a little fix that you'll have to do.

>I was wondering if anyone with a Nemesis has it installed with
>one of the fast ram cards available for the Falcon like the
>Aixit or Magnum cards?

Yes, Mike - I've just installed Nemesis and have a Magnum Falcon card.
To my big disappointment, the Magnum won't work with Nemesis in high
speed (24MHz). Nemesis in low speed (20MHz) works fine.
I was a bit surprised, 'cause the Magnum manual says that the card
should work fine with all accellerators that speeds up the complete
system, just like Nemesis does.
However, I've exchanged a few mails with Aixit and they say the
problem is in the programmable Mach210 chip on the Magnum card. So now
I'm waiting for a patched chip from Aixit and hope for the best. If
the new chip works, it would be great; Nemesis also speeds up fastram
access.

Hi!
> In what way do you mean? I think I understand, but could you make it clearer?
I meant two different things:
1. I had e.g. some archivers in the root directory, and i wanted to move them all into the subdirectories of one directory. I wanted also to move some directories / directory trees.
2. I don't know a way to rename a directory - the desctop lets me change the names of the files, but only displays the names of the directories.

Some months ago. When Apple set up the quality control board after
Gil Amelio took over. Apple does not want a repeat of the PowerBook
5300 and Performa 5200/6200/6300 fiasco again. Apple did extend the
warranty to seven years to those identified gliches. However, does
not cover CD-rom, floppy and HD which continue with a one year
warranty.

> This is ironic because I had just read your message after getting back
> from droping it off at Computerize in Barrington, IL to have the hardware

If it has been identified as design gliche than it's cover. Not the
normal wear and tear. Maybe they will replace it with a 6360
motherboard.

Anybody in Arizona that wants to buy a Falcon setup consisting
of the following should email me. :)

Falcon 030 with 4 meg of RAM, 68882 FPU installed, TT-Touch
keyboard kit installed.

Quantum Lightning 720 meg hard drive in external scsi box, with
SCSI terminator and cable.

CTX 15" VGA Monitor with adapter for the Falcon. Works
decently at 640x480, but I'd not use it in SVGA mode.

Extra mouse (Eklipse brand).

Software including Lattice C 5.5, Neodesk 4.05, Geneva 1.04,
Ultimate Virus Killer 6.3, Edit Plus 3.2, and Atariworks.

Looking for around $700.00 for the package.

Yes, I would like to get an STe, but most people sell them for big bucks
that I'm not willing to pay. :)

68. Atari Computers For Sale!

Newsgroup: comp.sys.atari.st
Date: 1997-07-03 00:00:00 UTC
From: bensmith@linda.teleport.com
Message-ID: <5pi0fl$h9h$1@linda.teleport.com>
Source record: 120130
Cross-posted to: pnw.forsale,comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech,abg.atari

I've Added more stock to my Atari catalogs. So check it out.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks, Labtec Speakers & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: 1040STF Computers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Hard Drives, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks, Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

That's right but you also lose a lot more memory to version 3 and above.
I have both installed on my Falcon and use v3 when I need the extra bells
and whistles (say with Papyrus) but for general BBS use I stick with the
earlier version which gives just as much of an acceleration but leaves me
with more free RAM.

70. CAB 2.0 success noted

Newsgroup: comp.sys.atari.st
Date: 1997-07-03 00:00:00 UTC
From: dkendall@facstaff.wisc.edu
Message-ID: <5pf2b2$nuo@news.doit.wisc.edu>
Source record: 120132

It's gratifying when you find that an upgrade really shows improvement over its predecessor. I've found that the YAHOO: Maps feature (find it at http://www.yahoo.com) works with CAB 2.0 (CAB.OVL 1.25) whereas CAB 1.5 and earlier choked on it. So I can plug in a (U.S.) street address and a bit later have a map on my SM124 screen with an "X" marking the address I entered.

I'll have to try a few more sites that were troublesome with earlier versions of CAB. The Delorme Maps CyberRouter still doesn't work...specifically clicking on the button which sends the start and end points of your trip has no evident effect. (Can you tell I find mapping tools among the more interesting features of the Web?)

The setup used was: 520STM, TOS1.4, 2.5 megs RAM, Syquest EZ135 cartridge drive, SM124 moo.monitor, STIK 1.12, CAB2.0 (demo), CAB.OVL 1.25, Supra 9600 baud modem.

Has anyone else noticed similar improvements?

Doug Kendall
Madison, WI.

> For now it only boots in showing me two drives and trash can.

That's good, because that is what TOS looks like. At least as regards your TOS it is working. However it sounds like the drive may be bad.

A little history:

The first 520STs were shipped with TOS on a disk.

Here i go again!!

Now that it is working(booting properly)there is still something that is not working. Everey time i want to read a disk in the drive it is telling me that there is nothing on the disk. It reads the disk but no files or folders are shown. i know for sure that disks i am using have atari tos on them and some games because they worked on another Atari 520stfm.

Is it broken or am i dooing something wrong?

Source record: 120244

Hi!!!.

I have some problems when I use Stimage or Lsaextract to make a St disk from .st or .lsa files used by Pacifist.
Both programs reject the disks that I have formated in my St (using "100tracks" program for example) if they are not formated in standard 720kb mode, but many st image files need 809kb or more disk space (81 or 82 tracks etc).
I don't know why those programs reject disks made with "100tracks" which are fully readable when I test their format in my original Atari 520 Stfm (Stimage says: "undefined disk error").
Is out there any Pc program that allows me to format disks selecting the number of tracks and sectors, like and Atari formatting program?
If not, what is the correct format method to create readable disks (using an original Atari St with DS floppy drive and a formatting program) for Stimage or Lsaextract?

If anybody knows how to transfer .st files to a St readable disk, please answer this question and explain it carefully!!!

Thank you.

Fernando.

>"After changing a font with `Fontkit Plus 4,' how do I install it into
>`Easy Text Pro?'"

Just follow the instructions for installing new fonts into any GDOS
application (ie. Timeworks Publisher). Briefly: put the fonts into
your GEMSYS folder, edit the Assign.sys file so that the new screen
and printer fonts are in ascending ID number order, then reboot. Theer
are fuller instructions in the Fontkit Plus manual.

Source record: 120247

Hello,

Dans l'article <5pf5oc$jpl@belzebul.imaginet.fr>,
Regis Gronoff, <rgronoff@imaginet.fr> a crit :

The question is WHEN did you buy NVDI ? Version 2.5 is 3 years old,
and the current version is 4.1x.

Last version is 4.11 R8 (a few weeks ago).

It's a dream to install (I think), and it *does* speed up screen
redraws etc.

I think the same thing. Really easy to install (except the ET-4000
version on Hades with ET-4000): just load the installation programm and fill
the fields... That's all.

And it allows you to use PC TrueType (i.e. vector) fonts in your GDOS
applications.

And it adds printers for which there is no driver for Speedo.

Don't forget that you can't switch the blitter off if you aren't running
NVDI (or maybe some other screen output speeder). Falcon VDI has no routines
for use without blitter.

Ciao

Thomas

Guentcho Skordev <ut13@ab112.rz.uni-karlsruhe.de> writes:
> 1. I had e.g. some archivers in the root directory, and i wanted to move them
> all into the subdirectories of one directory. I wanted also to move some
> directories / directory trees.
With the built-in desktop of TOS 1.02, you can only copy files and
directories, but not move them (IIRC). You could use a replacement
desktop or Kobold, upgrade your TOS (highly recommended) or run MagiC
instead of TOS. And before anyone starts flaming me because I haven't
mentioned MultiTOS, N.AES, etc.: It's better not to use MiNT with TOS
1.02. To be honest, it's better not to use TOS < 1.04, anyway, as TOS
1.00 and 1.02 have serious bugs and are awfully slow when used with
harddisks.

> 2. I don't know a way to rename a directory - the desctop lets me change the
> names of the files, but only displays the names of the directories.
The GEMDOS found in TOS 1.02 isn't able to rename directories. Another
reason to upgrade it to 1.04 or, better, 2.06.

Ciao

Thomas

As far as I know, the latest version of Papyrus (commercial word
processor for the Atari) allows reading and writing of .rtf-files.
There's no utility to directly convert M$-Word .doc-files, as Microsoft
has never publically documented their format and changes it frequently
(e.g., Word 97 uses a different .doc-format than Word 6 and Word 95).

Ciao

Depending on what you need on the Atari:

1) Export your Word document in plain ASCII.

2) Export your Word document in RTF format. Get the freeware marcel word processor. It can read/write RTF and export to whatever ST format you want.

3) If you don't have Word you need a PC and something to do the .doc to .rtf conversion somehow.

No you can't... You need to get TOS roms and change the roms on the STe

You can export (or save) the document as an RTF (Rich Text Format)
document. Then you can import it in the AtariWorks word processor.

Thats it!!!.

Yes!. Export in RTF (rich text format) and read it with Papyrus... will be almost identical to the original... this is what I do, alternatively I know it is possible read RTF docs with Atari Works (commercial) or Marcel (SW or PD, I don't remember right now), but I'm not sure how accurate is the conversion.

Regards.

Daniel.

I think there was a program around that will load the Tos image at startup
rather like MagiC does. Not sure where to find it or it's legalities, but
I believe it was originally for developers to check to see if there programs
would work with tos 2.06. TOSBOOT? Not 100%, but I do know it can be done,
(mind you it'll reside in memory and rob you of @ 300k).

TOS 1.02 won't let you change directory names, but there are shareware,
freeware, utilities that'll patch that. (Alternatively, you really should
upgrade you TOS to a later version), it sound's like Kobold will do everything
you need, but it's commercial, and I'm not sure where you could get it from...

I have a vague memory of owning a 10-year-old text to speech program
for my 520ST. I think it was called Storymaker or Storyteller. I
remember only that the demo sounded like a human was speaking, and
that you could easily change the inflection of any word. I sincerely
hope my memory is accurate, because I can't find anything that comes
even close for an IBM.

Does anyone know what the program is called, and where I can find it?

Thanks in advance.

I'm pretty sure that 2.5 only allows you to use normal GDOS fonts,
Speedo came in v3 I think.

well version 2.5 did not do fonts(GDOS), it was screen accelerator only
AFAIK.
still worth it!
The first NVDI version that did fonts(GDOS) was version 3 and it did
bitmap, Speedo and true type fonts only.

Caution here! I found out the hard way, that TOS ROMS from overseas have
at least one built-in problem; British (incl. Australia and...??) ST
keyboards have the backslash key in a different place, so in order to
use the TOS 1.4, you'll also have to AUTOload a program such as
KEYEDIT,to remap the keyboard. Also, CALAMUS and DATADIET were American
versions, and wouldn't run with British TOS. This is, of course in
addition to the question of 2-chip or 6-chip TOS.

103. New at Systems For Tomorrow! (July 3rd)

Newsgroup: comp.sys.atari.st
Date: 1997-07-03 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <5ph3hj$1vk@uucp.tfs.net>
Source record: 120272

New at Systems For Tomorrow July, 3rd 1997
~~~~~~~~~~~~~~~~~~~~

CAB 2 $34.99
Crystal Atari Browser v2, is a very well done HTML document browser! It works great with HTML based CDs, and will even do the World Wide Web if you have an internet connection up and running. The internet connection layer (ie. STik or MintNet) is NOT included with CAB 2.

Magic 5 Upgrade $29.99
At long last we now have the Magic 4 to 5 Upgrade pack. This package will upgrade Magic 4 to Magic 5. You MUST currently own Magic 4 to use this upgrade!

NVDI 4 Upgrade $29.99
Guess what else we finaly got? :) This package will upgrade NVDI 3 to NVDI 4. You MUST currently own NVDI 3 to use this upgrade!

Scan X for TOS Computers $49.99
Microtek E3/E6 scanner driver is an easy to use GEM application that provides full access to most Microtek single pass scanners, mainly the 24bit Microtek E3 & and the 30bit E6 flatbed scanners. Features of ScanX for Microtek scanners: 24Bit (or 30bit) (16.7 M colors), 8Bit (GrayScale), 1Bit (Monochrome) HalfTone and LineArt, Variable resolution settings: 50 - Max. supported by scanner, Contrast setting, Brightness setting, Exposure setting, upto 8.5"x14" scanning area, PreScan Window with Clipbox, Scanning velocity setting, 12 built-in HalfTone pattern setting, Fast direct to disk scanning (little memory usage) for 1 & 8 Bit scanning, Save images as IMG and TGA, Positive or Negative scanning, BackTracking, 3D modern look, MultiTasking friendly scanning, and more. From Homa Systems House.

Mega Mines for ST/STe/Falcon $9.99
Mega Mines is an addictive version of the now classic, minesweeper game. Can you locate all the hidden mines, given only the number of mines next to cleared portions of the field? A good logic game to give the old brain a little work out. Features 3 difficulty levels, Digital Sound, Extra Life bonuses, and Extra Time bonuses. From 999 Software.

Tetris II Strikes Back for TOS Computers $12.99
Tetris II: Strikes Back includes all the fun and excitement of a traditional tetris style game, plus the enhanced Tetris II, where you have specific objectives to be carried out on each level. Both
~~~~~~~~~~~~~~~~~~~~

Tetris and Tetris II include a Two Player mode, and the optional addition of bombs to help you out of tricky situations. Tetris II Strikes Back is available now in either an ST/STe version (Item#21165) or a TT/Falcon version (Item #21360) for only $12.99. From Empty Head Software.

Power Up! for TOS Computers $19.99
Power Up is a great top view racing game for the Atari ST,STe,TT, and Falcon computers that was inspired by the classic Rally Speedway for the Atari 800. It provides top notch racing fun. Power Up is also similar to the more recent Power Drive Rally for the Jaguar, with the notable addition of a Split Screen Two Player Mode.. Some of Power Up's features include: One or Two Players, 60 torturous circuits, brilliant 32 color graphics on all machines, full DMA sound support for STe, TT, and Falcon Owners, and Includes a track editor for creating new race circuits. From Emply Head Software.

Desktop Solitaire for TOS Computers $19.99
A GEM friendly implementation of EIGHT classic solitaire Card Games! Includes: Baker's Dozen, Demon, Fourteens, Golf, Klondike, Poker Square, Pyramid, and Scorpion. Requires 640x480 resolution in Monochrome, 16 or 256 colors. TT or Falcon recomended. For more info, and a playable demo, go to: http://www.SystemsForTomorrow.com/kordes

Also Available:
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
Plus about 400 additional products for your TOS Computer!

I may have a copy at home - email me.

There is something like it for the PC - but it's commercial and runs about $300 or $400. I've been trying to find something suitable for my neighbor who has throat cancer and can't speak - it would be great if he could type on the keyboard and send speech over the phone that way. I have several 800-series systems and may be able to throw together another ST-class system, but I have parts for a half-dozen PCs, so that's what I am trying to give him.

107. STacy/STbook info needed!

Newsgroup: comp.sys.atari.st
Date: 1997-07-03 00:00:00 UTC
From: bobmcphail@aol.com
Message-ID: <19970703234000.TAA24901@ladder01.news.aol.com>
Source record: 120276

As a long-time 1040 ST owner who is interested in buying a portable Atari ST for some production work I am doing, I have a few questions:

1) Is the STacy portable in the sense that it can be run off a battery? How long will the battery last?

2) Is there a basic word processing program I can find somewhere that will be compatible with the STacy?

3) Is it possible to find an STbook anywhere? I have heard a few were made for the US market, but have yet to find one.

If anyone can answer these simple questions for me, I would be very appreciative.

Thanks in advance.

Bob

110. Atari Memory Upgrades in UK

Newsgroup: comp.sys.atari.st
Date: 1997-07-03 00:00:00 UTC
From: David Harcourt <tayspdh@unix.ccc.nottingham.ac.uk>
Message-ID: <33BC143D.869@unix.ccc.nottingham.ac.uk>
Source record: 120279

I've got an Atari ST520FM, and I want to upgrade its memory to run Cubase. I've got phone numbers of a couple of companies who can do this, but they're no more than names to me.

Does anyone have any recommendations of good companies, or horror stories about bad ones?

Nostrodamus phrophesised this from Harry to Matthias...

Hi Harry!

MK>>
MK>> I want to connect the Atari Laserprinter SLM 605 to my MEGA ST2.
MK>> Can anyone help me with an interface ?
HS>
HS> There isn't an interface - just a printer driver and a DMA lead.

Matthias should have an SLMC804 controller, a flat box with a fixed DMA lead
and a multipin connecter for the lead to the printer - not a printer driver
as the term is commonly accepted BTW.

DC> 'scuse me for butting in H ol' bean, what's the issue here?

From my pov I'm trying to get static data into the smaller memory block, so that I can leave TTRAM for all the useful stuff. NVDI seems to be the main culprit for wasting well over a meg's worth of RAM that I'd like to be reserved for programs to run in.

Before anyone says it yet again, I know that it should already be using STRAM, but the fact remains that it doesn't (using Profile or Freemem).

And what's the problem with suggesting to upgrade the TOS which will
solve his problems once and forever? And btw, there's no need to shout at
me.

Well, I guess he's able to think of that workaround himself, but it's not
a way to just rename a folder. For that, he'll either have to upgrade his
TOS or use utilities which bypass the GEMDOS to do so.

Ciao

Thomas

Nope, even the first versions of NVDI included a GDOS, but only for
bitmap fonts. Support for vector fonts first appeared in 3.0.

To make the information complete, one could add that MagiC is also
able to move a folder to another place inside the same partition. This
works with (V)FAT and HFS (MagicMac).

You put the disk in your drive and switch the computer on. Whenever a ST is booting and searching for a disk, it is first looking for .IMG Files and possibly loads it.

No.

Have you tried what you are talking about? That is simply wrong. At least with
the STs I have with TOS 1.0, 1.62 and 2.06.

Only the first STs with TOS on disk have a simple ROM that does what you say.
Not STs with TOS in ROM.

127. Increasing Falcon HD Space/SCSI Bus Timeout

Newsgroup: comp.sys.atari.st
Date: 1997-07-04 00:00:00 UTC
From: "Jay T. Millar" <jmillar@eaglequest.com>
Message-ID: <33BD1C1E.67871039@eaglequest.com>
Source record: 120149
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hey All,

I haven't been in the Atari scene in a bit, so please cut me some slack. :)

I've got a Falcon I've installed Linux/68k on several times, but I keep running into the same problem:

My SCSI bus to my external drives always times out at the worst possible times during write operations
(very nasty problem for a UNIX system). I'm aware this is a known hardware problem with early Falcons,
and that there were things you could do to fix it, but I don't think I have the kind of time, motivation, or
resources to fix it permanently.

That being said, I'd like to increase my IDE harddisk space (whose interface doesn't time out) from the measely
80MB internal I've got in the thing. My true questions are these:

1) Can a run-of-the-mill EIDE harddrive which are so cheap nowadays be connected to the internal IDE interface
in some way? Provided I have the drive in an external case with its own power supply, would it simply be a matter
of running a new ribbon cable out of the Atari case? Are there any IDE communications problems with this setup?
How about Atari HD driver issues?

2) If I can't do #1, can I simply pick up another notebook size (2.5"?) harddrive and stuff it in the thing? I'd rather
do #1 because of the cost factor, but this solution seems the most straightforward answer to my problem. Anyone have any
recommendations where to buy these types of harddrives?

Well, thanks in advance for any advice! I'd really like to use my trusty Falcon030 in some productive capacity.
BTW, please respond via e-mail if possible.....

$50,000.00 for only $5.00 within 2 MONTHS?????
==========

You gotta be crazy! How on earth do you think you can buy 50 grand for lousy 5 bucks? Well, that's what I was wondering, too until I came across this letter.

First of all, IT'S PERFECTLY LEGAL! (Call 1-800-725-2161) if you have any questions about the following opportunity to make $50,000.00 and that probably WITHIN LESS THAN TWO MONTHS!

Well, here it goes:
A little while back, I was browsing these newsgroups, just like you are now, and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah, right, this must be a joke," but like most of us I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address in the bottom of the list at #5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it.

I knew that that was the opportunity I had waited for for a long time. I thought it was about time that the money of the world gets into the right hands! OURS, right? I never had a doubt that this thing will actually work and even if it didn't, what were 5 stamps and $5.00 for a try?

As I mentioned before, like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal!

Now, that's how your story WILL sound like, too if you participate:

Well GUESS WHAT!!... with in 7 days, I started getting money in the mail! I was shocked! I still figured it would end soon, and didn't give it another thought. But the money just kept coming in. In my first week, I made about $20.00 to $30.00 dollars. By the end of the second week I had made a total of over $1,000.00!!!!!! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in ....

Let me tell you how this works and most importantly, Why it works....also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it. The process is

very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 5 $1.00 bills and place ONE inside EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL!

Mail the 5 envelopes to the following addresses:

#1 Robert Jezil
114 Jefferson Ave.
Slidell, LA 70460

#2 Phil Walther Jr.
9495 Annapolis Lane North
Maple Grove, MN 55369

#3 C. E. Burkman
170 University Ave. W
Suite 12-129
Waterloo, Ontario
N2L 3E9

#4 A. Bailey
1207 Reeves Road
Plainfield, IN 46168

#5 J. Martin
P.O. Box 2292
Reston, Va. 20190

STEP 2: Now take the #1 name off the list that you see above, move the other names up (2 becomes 1, 3 becomes 2, etc...) and add YOUR Name as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there is close to 18,000 groups) All you need is 200, but remember, the more you post, the more money you make!

Don't know HOW to post in the newsgroups? Well do exactly the following:

FOR NETSCAPE USERS:
1) Click on any newsgroup, like normal. Then click on "To News", which is in the top left corner of the newsgroup page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!!!

3) Now go to the message part of the box and retype this letter exactly as it is here, with exception of your few changes. (remember to add your name to number 5 and move the rest up)

4) When your done typing in the WHOLE letter, click on 'FILE' above the send button. Then, 'SAVE AS..' DO NOT SEND YOUR ARTICLE UNTILL YOU SAVE IT. (so you don't have to type this 200 times :-)

5) Now that you have saved the letter, go ahead and send your first copy! (click the 'SEND' button in the top left corner)

6) This is where you post all 200! OK, go to ANY newsgroup article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'. Click on attach file then find your letter wherever you saved it. Click once on your file then click 'OPEN' then click 'OK'. If you did this right , you should see your filename in the 'ATTACHMENT BOX' and it will be shaded.

NOW POST AWAY!

FOR INTERNET EXPLORER:
It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then print the article for your records to have the names of those you will be sending $1.00 to.

Go to the newsgroups and press 'POST AN ARTICLE' type in your flashy subject and click the large window below. Press 'CTRL' and 'V' and the article will appear in the message window. **BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES.** Now re-highlight the article and re-copy it so you have the changes.... then all you have to do for each newsgroup is 'CTRL' and 'V' and press 'POST'. It's that easy!! THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup!

REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200

If these instructions are too complex to follow, try Forte's "Free Agent." It is freeware for noncommercial use. To download it, simply use a search utility and type "Forte Free Agent". You should be able to find it.

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you con invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now the WHY part:

This entire principle works because it is in a format of an upside down tree with thousands of branches. Everyone below you will see to it that the tree continues because they want to get money. Those below THEM will continue because THEY want to get the cash etc.

Out of 200 postings, say I receive only 5 replies (a very low example). So then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #3 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #2 and only receive 5 replies each, I will make an additional $626.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM of 200 letters with my name at #1 and they each only receive 5 replies, that just made me $3,125.00!!! With a original investment of only $5.00! AMAZING! And as I said 5 responses is actually VERY LOW! Average is probable 20 to 30! So lets put those figures at just 15 responses per person. Here is what you will make:

at #5 $15.00
at #4 $225.00
at #3 $3,375.00
at #2 $50,625.00
at #1 $759,375.00

When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 and start posting again.
The thing to remember is that thousands of people all over the world are joining the Internet and reading these articles everyday, JUST LIKE YOU are now!! And this will go on and on and on and on.... get the picture? Well, there's 5,000,000,000 people on the world and most of them will eventually end up being hooked into the internet. So there are virtually unlimited resources. Of course this will work the best at the very beginning so the faster you post, the better for YOU!

So can you afford $5.00 and see if it really works?? I think so! People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest works?? I think so... People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the Internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual Internet. Remember, play FAIRLY and HONESTLY and this will work. You just have to be honest. Make sure you print this article out RIGHT NOW, also.

Try to keep a list of everyone that sends you money and always keep an eye on the newsgroups to make sure everyone is playing fairly.

Remember, HONESTY IS THE BEST POLICY. You don't need to cheat the basic idea to make the money!!

GOOD LUCK to all and please play fairly and reap the huge rewards from this, which is tons of extra CASH. **By the way, if you try to deceive people by posting the messages with your name in the list and not sending the money to the rest of the people already on the list, you will NOT get as much. Someone I talked to knew someone who did that and he only made about $150.00, and that's after seven or eight weeks! Then he sent the 5 $1.00 bills, people added him to their lists, and in 4-5 weeks he had over $10k. This is the fairest and most honest way I have ever seen to share the wealth of the world without costing anything but our time!!! You also may want to buy mailing and e-mail lists for future dollars.

Please remember to declare your extra income. Thanks once again...

I just bought a HP5L and like to make the most of it. Does anyone know where I can get drivers for Calamus SL, NVDI and Papyrus.

While I am at it: where do I find the PCL-codes to use? (Setting the printer in Ecomode.)
Is it true that the tonercartridge can be refilled?

Cecil.

7-4-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 7-4-97

I've had a couple of people interested in the stuff below, but all of
them fail to get back to me. If your one of those people, and your
still interested get back to me asap. First come, first serve.

()()()()()

Item : Complete System
Computer : Mega 4 w/ 4mb RAM and TOS 1.04
Monitors : Monochrome (SM124) * AND * Color (SC1224) w/ Monitor master
Software : Over 100 original games (100's of disks!) plus
productivity software. Also MANY magazine disks
Comments : Also includes joysticks, Mouse, and a Modem
Comments : The Mega4 has the original box and manual!

Asking : $250 + shipping

I'll throw in whatever else you want (within reason) from the misc area
that your interested in.

()()()()()

Item : Complete External Hard drive setup
Host Type: ICD Link
Megabytes: 139mb formated
Type Case: Plus Impulse flat case
~ size : 13"(width) 2.5"(height) 14.5"(depth)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $150 + shipping

I'll be happy to load the hard drive with shareware/pd software.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - MAKE ME AN OFFER!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

If you have any questions, or your interested in one of the items
listed above, PLEASE Email me! All funds must be in US Dollars.
If you respond here, PLEASE keep the same title so that I can easily
find it.... I will ship ANYWHERE.

Internet: danbrown@cet.com

Thanks for your time!

I Have the facilities on my web page for forms, I have made myself a nice little feedback form for anyone who has used any of the STOSSER software titles hint hint :)

I want to make an ATARI Quiz.. But I havn't got the brains it would seem :).....I need someone to write me a sort of Article all about ATARI.....But with keywords highlighted..

eg "The best Home Computer is an *Atari* Computer because"...

I would then convert the whole text to html, and at the appropriate place replace the highlighted words with a form box.. the user fills in all the words... 20, 30 40.words I don't care..
So who can write a largish piece to be used as a quiz.. everyone submitting there answers will be placed in a table.. ie:winner at top etc.. if plenty of people get=score then first answeer is at top, spelling etc and correct use of capitols etc will with all the correct answres make for a perfect score,

It would be perfect if whoever?.. could make a new one every month.. :)
All credits will be given to quiz maker of course :)

So who has some time to spare?

Cheers !ynoT (ATARI Programmer)

You can do this yourself with easy to fit memory expander boards - no
need to rely on engineers.

Dave, at The Upgrade Shop, has Marpet boards which take regular SIMMs.
His prices (with SIMMs):

2Mb £48
4Mb £72

Give him a call on 01625-503448

>> Do you think people woudl actually use it? For uber-wank value? :P
>
> As a matter of interest only...just exactly what is "uber-wank" ...

My connection is too slow right now for me to pull out the
hackers dictionary.. but I shall elucidate..

"wanking" is commonly used to describe any process, which in its
field, is going over the top. In music, for instance, it could be
considered a "particularly wankful solo" if a guitarist goes nuts, does a
good looooong loud super fast solo, iof thats not the norm for the style
hes performing in. Likewise, having a "Hello World" program with a huge
hypertext helpfile and graphical visuals (see the FSF's Helloworld...) is
wankful.

"uber" tends to imply "the most". An "ubergeek" is an ultrageek.

"uber-wank" is the ultrawank, or "people would use this
BBS-emulator, even though its soooo bad, but because its SOOOO!! bad".

Pardon the grammar.. I've got less than 300bps, effective, I
think today :P

> How about Atari HD driver issues?

Yes. get HD Driver (almost up to version 7.0) and you can attach
2 IDE(or EIDE) drives. I would keep the cable length as short as
pssible though. I think CBHD can do this also, but I've no experience
with it.

> 2) If I can't do #1, can I simply pick up another notebook size (2.5"?)

> recommendations where to buy these types of harddrives?

I myself went for this option. I put in a 280$ 1.3GB 2.5" IDE hard drive
inside my Falcon. Get an notebook hardrive, a used notebook drive
would be the best price wise. 25" drives are getting less expensive.

>I just bought a HP5L and like to make the most of it. Does anyone know
>where I can get drivers for Calamus SL, NVDI and Papyrus.
>
Hoi,

The printer drivers for the HP Laserjet will work with the HP5.
Calamus has two HP4 drivers: HP_LJIV.CDT and HPLASERJET4.CDT
NVDI 4 comes with a driver for the HP4.
Papyrus 5 has a combined printerdriver: HP Lazerjet4/ driver.
AFAIK these drivers can only be obtained from the programmakers
itself.

>While I am at it: where do I find the PCL-codes to use? (Setting the
>printer in Ecomode.)

On the Net you can find an utility called HPEXPL15.ZIP. I don't know
where however but if you want it let me know. I'll put it on the
Belgian ftp-site 193.190.205.13 archive/atari/incoming.
This utility is for the HP4 but it will work with the HP5 too.
You can do about everything with this program. Changing fonts, setting
to ecomode, setting REt, etc. You can use it as program on its own or
as an acc or as autofolder program. The archive contains even a driver
for the old trusty 1stword+.

There is also somewhere out there a HP configuration CPX. Again I
don't know where I've found it.

Hope this help

Doei,
martin

Has your Falcon enough memory? Outline Art is a RAM consuming
application. At the time my TT had only 4 mb RAM I could only use the
2mb version of Outline Art.
AFAIK you can't configurate Outline Art to run with a specific
color mode. If your computer runs in 256 color mode Outline Art will
run in that mode.
BTW: Maybe a silly question but are you sure that your Falcon runs in
256 color mode?

I don't know why but it seems that with CAB ibp runs slow. It takes
ages before I am where I want to be. However with aFTP (MiNT version)
or Oasis 1.35 things runs smootly. Most of the time I can download
files with a speed of 2800 cps or higher. Unfortunately not always
sometimes I can't get higher of 600 cps. Maybe there was to many
people online that moment.

> Not STs with TOS in ROM.

The very first ST's released in mid 1985 were like that (lobotomised boot roms that relied upon a disc loaded TOS). But the ability to load a disc-based OS in the same manner is still present in all of the TOS-in-ROM ST family. (This is the way games discs load at boot time, BTW)

I owned a TOS 1.02 Mega4 ST when someone gave me a copy of old, slow and very obsolete Disc-TOS 1.0 some years ago (to test against the custom Tariland disc magazine program I had written). It [Disc-TOS 1.0], and the later disc version of TOS 1.04 needed an executable boot sector which would load the TOS.IMG file into memory and execute it - simply having the TOS.IMG file was not enough. (simply running the TOS.IMG file was not enough either, and would corrupt whatever data your current OS had placed in memory)

One simply put the disc in and switched the computer on. The ROMs resident in the computer (irrespective of version) would look for an executable disc (the boot sector had executable code in it as well as a different set of flags which meant "Boot me" as opposed to most discs which mean "Ignore me, I'm normal"). When it found one, it would load the file named in the bootsector, and pass control to the bootsector code.

AFAICR, Disc-TOS 1.0 was a single sided disc with 80 tracks. The TOS 1.0 TOS.IMG file was 206-odd thousand bytes long. (1.04's IMG was 196588-ish

in size). This would leave around 150k of free space on disc, which, I believe, was used for the control panel, VT-52 emulator, and sample app.

TOS 1.0 disc only allowed four DAs. I believe that ROM-TOS 1.0 extended this to six, where it stayed until GEM AES 4 came along. (Falcon TOS [containing AES 3.4] may have increased it from six DA's, but I am unable to comment as I do not have a Falcon)

I have no idea where the disc with TOS 1.0 is nowadays - otherwise I'd try to locate it and probably extract the boot sector and post details.

(I've had a TT for five years now, and the old, sluggish Mega4 I bought in 1990 is now in storage, along with many/most of it's discs).

In a moment of weakness/curiousity I found that Disc-TOS 1.0 and TOS 1.04 on-disc aren't usable on the TT [which has TOS 3.05]

Quote For The Month:

(From an infomercial currently playing on New Zealand Television)

"What do our customers tell us about using the Pure Water Distiller?"
"... [The Water] is so easy to drink, compared to other water"

Yeah, I agree. Whenever I want to drink normal water, I have to consult a _really_big_ instruction manual - and even then, it takes me half an hour before I can start to drink, because there aren't any pictures showing me how. But with the Pure Water Distiller, they include a simple one-page leaflet - WITH PICTURES!! - that show me how to drink water...

'Cos I'm an idle git! :>

Basically, I have a working system and I don't see any advantage in NVDI
3 or later which would make it worth my while changing to it full time.
There are limits on the minimum size for the font buffers, IIRC, so
there's still a problem with it gobbling memory. Besides, I only need
monospaced fonts when I'm in normal (BBS) mode so there's no real
advantage in having Speedo or True Type fonts available. It might be
different if I could afford to buy a RAM upgrade for the Falcon but
that's not on for the time being.

Regards,
Keith

Hi,

Remember my Learn The Net programme?
Well - I've nearly finished school for 7 week and
I thought I would get it updated and up to a good
standard. The only trouble is I need Ideas.

I have a few ideas and tutors but what do
you want in it.
It will be a bit harder for me to do now
with me not using my Atari on the Internet
but I can still do it.

All I need to know is 2 things.
Do you want me to do it?
Any ideas?

Post your ideas to this newsgroup or my email address.

Thanks for listening
Stuart

JTM> (2.5"?) harddrive and stuff it in the thing? I'd rather
JTM> do #1 because of the cost factor, but this solution seems the
JTM> most straightforward answer to my problem. Anyone have any
JTM> recommendations where to buy these types of harddrives?

Yeah, I just installed a new 1.08 gig drive inside my Falcon. I went with a Toshiba, because another Falcon owner had already confirmed that it worked (that and it was about the cheapest gig drive I could find). I've also heard Fujitsu, Conner, Seagate, Quantum and Maxtor recommended for internal Falcon drives.

As for where, I bought mine for $199 at COMPU.D (800-929-9333). I paid another total of $20 to have it shipped 2nd day (though I actually received it in less than ONE day, via Fed Ex). The total of $219 was at least as cheap as everyone else wanted just for the drive itself, without shipping. Needless to say, I recommend these guys very highly.

151. PROFILE 2 v2.21 now available

Newsgroup: comp.sys.atari.st
Date: 1997-07-05 00:00:00 UTC
From: msbaines@cix.compulink.co.uk
Message-ID: <ECuwz3.68I@cix.compulink.co.uk>
Source record: 120084

PROFILE 2 v2.21 *THE* Atari system analyser is now available.
This is a major upgrade on the v2.14 released 2 years ago.

This is *the* most comprehensive system analyser available and fully
compatible with all Atari machines and Atari emulators and operating systems
including MultiTOS, MagiC, MagiCMac, MagiCPC, Geneva, GEMulator, STonX,
PaCifiST.

PROFILE 2 is a modern design GEM program with an easy to use and thorough
interface which includes:

Choice of system screen fonts

Amodal dialogs in windows

Submenus

Full keyboard or mouse control

ST-Guide context-sensitive help using ST-Guide either as an accessory or
from disk

Any page, series of pages or whole report can be sent to the printer, a
disk file or the clipboard

Printer initialisation string

User-defined report label

Configuration saved to disk

GEM-List keyboard standard compliant

The report is most thorough, consisting of the following:

1 Hardware, TOS and Display
2 Memory
3 Drives
4 pun_info Structure
5 File System Limits and Capabilities
6 Floppy Disk Drive A Check
7 ROM Cartridge
8 Serial Devices - Current Settings
9 Miscellaneous Falcon030 Details
10 AES
11 VDI Drivers
12 Installed Fonts
13 Multitasking System
14 Multitasking System - Configuration File

15 Multitasking System - GEM.CNF File
16 AV Server Protocol Status
17 Important System Configuration Addresses
18 Operating System Header Block
19 Program Basepages
20 AES Internal Shell Buffer - Installed DESKTOP/NEWDESK.INF File
21 AES Internal Shell Buffer - The Installed Configuration
22 Control Panel Settings and GDOS
23 GDOS - ASSIGN.SYS File
24 GDOS - EXTEND.SYS File
25 AUTO Folder Programs
26 Current Accessories
27 Current CPX Modules
28 Currently Running AES Processes
29 Vertical Blank Interrupts
30 Cookie Jar Configuration
31 Cookie Jar Interpretation
32 Environment Variables
33 System Variables
34 Exception Vectors - First 32
35 Exception Vectors - TRAPs
36 Exception Vectors - FPU and MMU Interrupts
37 Exception Vectors - MFP 68901 Interrupts
38 Exception Vectors - TT MFP and SCC Interrupts

Each page consists of many items and can run to hundreds of lines each.

XBRA and XNAM compliancy can be checked for on System Variables and Exception Vectors via a dialog or double-clicking on the relevant line in the display window.

PROFILE 2 is shareware and costs a minimum of 5 UK Pounds to register. This provides a key which gives you access to all parts of the program. All printing and disk operations are unavailable in the non-registered version.

The filename will always be PROF2_xx.ZIP where 'xx' denotes the minor version number, in this case PROF2_21.ZIP.

The latest version will always be available from:

The Linnhe Computing web site:
http://www.stsd.demon.co.uk/linnhe.html
specifically:
http://www.stsd.demon.co.uk/profile2.html

CIX:
atari.st conference current filelist topic (such as atari.st/files97).

From what I do know of bootsectors, there is one that will automatically
run any program called COMMAND.PRG(which orginaly is a CLI thing) before
even loading the desktop.

Can I renamed TOS.IMG to COMMAND.PRG and have it run normally? I can
easily make the bootsector with DC Formater, which has other ones like
booting in Medium rez. Or is the image file far differnt from a normal
executible program?

Hi darkwing@ica.net!

d> Now that it is working(booting properly)there is still something that
d> is not working. Everey time i want to read a disk in the drive it is
d> telling me that there is nothing on the disk. It reads the disk but
Try an experiment with a disk that you don't wish to keep the progs on.

Put the disk in the drive, click on the A drive icon and choose 'Format disk'
from the file menu.

Once the format has finished, save the desktop (can't remember the menu
location for this), and see if the file "desktop.inf" appears in the
directory listing for that drive when you double-click the icon.

That sould give you some idea if the drive is faulty, it's not unknown.

Speak to 'ya later!

l> goes slower now than before (I used to run TurboB&W)

What is TurboB&W? If it's what used to be known over here as TurboST then I think you are right - NVDI is slower. The benefits were more to do with retaining compatibility with new standards by replacing the VDI than raw speed, in my experience. When I switched from QuickSTe to NVDI the slowdown was clearly noticeable.

When it comes to compatibility with software like 2in1 or Kandinsky, though, I think you'll find that NVDI is essential rather than the alternatives.

l> Please write any info you have about NVDI because it seems I don't
l> now the alphabet.

Install it to your Auto folder - that's about all there is to it...

Regards, Harry Sideras - UK Association of Atari User Groups

Nostrodamus phrophesised this from Harry to Derryck...

Hi Harry!

w>>>> Is there a way to have NVDI load the fonts into ST Ram instead of

DC>> 'scuse me for butting in H ol' bean, what's the issue here?
HS>
HS> From my pov I'm trying to get static data into the smaller memory
HS> block, so that I can leave TTRAM for all the useful stuff. NVDI seems
OK, good thought.

HS> Before anyone says it yet again, I know that it should already be
HS> using STRAM, but the fact remains that it doesn't (using Profile or
HS> Freemem).
I know that I've asked this question before, doesn't the Atari laser require
that drivers should run in ST RAM, taking this line of thought further should
mean that NVDI should also load to ST RAM? The fact that it doesn't would
seem to argue against that.

Speak to 'ya later!

164. Cassette Labels

Newsgroup: comp.sys.atari.st
Date: 1997-07-05 00:00:00 UTC
From: Tim Vanns <sumo@zetnet.co.uk>
Message-ID: <19970705064311709 38@zetnet.co.uk>
Source record: 120097

Does anybody know where I can get a Audio Cassette label programe
that will work on a Falcon and Epson Stylus Inkjet?

The program I had been using worked with my 24 pin printer, but
prints a double line down the centre of the label when I use the Stylus.

Any help will be most grateful.

Thanks in Advance

Tim

165. Mega 1 and Software FS (US)

Newsgroup: comp.sys.atari.st

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Atari Mega 1 Computer. This was not released in the U.S.
Same as a Mega 2 or Mega 4 execpt it has 1 Meg of RAM.
German TOS 1.2, German Keyboard. Has U.S. 110v power supply
installed. With German manual and mouse. $100.00

Atari SM124 Mono Monitor. Unit has the full screen modification
done. Bottom right corner about 1 inch worth has minor skew.
It's 100% usable but a minor flaw. Comes with power cable. $40.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $65.00

Atari SF354 SS External Floppy Drive. Comes with power supply and
cable to connect to ST. Unit is in perfect working condidtion
but a little loud. Packed in original box. $10.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $65.00

Supra 2400 baud external modem. No power supply. $5.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

New Pagestream 2.2 SE by Softlogic. The classic DTP for the
Atari platform. This is the newest release for the Atari.
Obviously comes with box, docs, and diskettes. Also comes
with the older pre SE 3 inch thick Hard case binder set of
complete documentation, not the watered down SE stuff. $35.00

DEGAS by Batteries Included. The original Graphics Design
program for the ST. Includes Book and disk. $10.00

REAL BASIC by CCL. A full featured BASIC language. Nice
features include an inline Assembler and demo programs.
Capable of MENUS and MIDI programmming. Includes manual
and disk. $10.00

ULTRASCRIPT by Imagen. Full Postscript emulator for the Atari
ST. Works awesome with a SLM804 and other dot, ink jet, and
laser printers including the popular Epson and HP series.
Comes with 27 typefaces plus an upgrade font set including
35 more typefaces! Wordperfect for the ST has postscript
support. With Ultrascript you can get perfect scalable font
printouts and create Postscript files. $40.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $3.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

Drop
: > me a line and I will send them to you via mail. You are more than
welcome
: > to them if you can use them.
:
: Caution here! I found out the hard way, that TOS ROMS from overseas have
: at least one built-in problem; British (incl. Australia and...??) ST
: keyboards have the backslash key in a different place, so in order to
: use the TOS 1.4, you'll also have to AUTOload a program such as
: KEYEDIT,to remap the keyboard. Also, CALAMUS and DATADIET were American
: versions, and wouldn't run with British TOS. This is, of course in
: addition to the question of 2-chip or 6-chip TOS.

It seems that the first person was from Florida, and the second from
Canada?
There shouldn't be any problems with that?

On the other hand, last time I looked the Stacy had 32-pin 27C010 EPROMs,
a type not directly supported by other ST:s. Through extra wiring they can
be made to work though. Pins 1+32+31+30 should be connected (making them
permanently high), and A17 should be connected to pin 2.

On the board A17 should be coded (solder blob) as 256K, while A16 should be
coded as 1M, and CE to 1M.

If no half-moons for coding are present then A16 too must be drawn, to pin
3,
additionally, an 74LS11 should be used to AND the three ROM select signals
into one single. (Yes, I know what the 74LS11 is, but we have negative
logic here, yes?)

Too much effort for someone not too sure of what he's doing. Besides, the
Stacy ROMs differ from other 1.4 ROMs, but I can't say in what respect...

Martin

169. Printing with pagestream

Newsgroup: comp.sys.atari.st
Date: 1997-07-05 00:00:00 UTC
From: AMarti01@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <2782_AMarti01@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 120173

I've just acquired a copy of Pagestream 2.2, and have gotten hold of an Epson Stylus Color printer driver for it so as to be compatible with my Epson Stylus Color 500 printer (720x720 dpi). However, could someone please explain the colour printing process. The display on my screen is black and white (monochrome), and although I am led to believe the screen display will still print in colour, it only prints in black and white. I've tried other colour drivers, and am using the NO SEPARATION driver, although I've also tried the CMYK and mechanical separation drivers. Would this by chance have something to do with the colour pallete, and if so, what am I doing wrong and how can I change it? I am running on an STe with 4 Megs, and I've got a copy of the MONSter screen driver which enables me to run at 640x400x16. If the problem is that I don't have enough colours I can try using this, but last time I tried the colour palette failed to adjust itself when I loaded a 16-colour Degas picture. Indeed the palette remained with one white colour and fifteen black.

Any help appreciated, Alan.

P.S

I didn't ge the full Pagestream manual, so if I seem ignorant about something, please excuse me.

I'd be _real_ careful how one worded that. While I think I know what you mean, folks around here come down _real_ hard on software pirates (rightly so), and tend to ignore messages that sound like they come from a pirate. If you meant you bought or were given Pagestream, and didn't get the whole manual, or got the close-out small manual, I'd probably word it that way, instead of the way you did. :) :)

As to your printing problems, I live in a black & white world. Are you sure that the printer drive you are using for sure supports color??? Some don't.

179. Atari ICQ list

Newsgroup: comp.sys.atari.st
Date: 1997-07-06 00:00:00 UTC
From: Stuart Shaw <Stu@shaw1.demon.co.uk>
Message-ID: <97+axHAlRAwzMwBc@shaw1.demon.co.uk>
Source record: 120033

Hi,

I am planning on setting up a series of ICQ lists on a web site
and thought I should make one for the atari newsgroup!

I know icq is a pc programme but the PC is used by many
people.

If you have a icq number email it to me and I'll add it
in the next update.

If you don't know what ICQ is or you want the software goto
http://www.mirabilis.com/

As soon asd I get the web site set up I'll tell you.
If the icq page goes well, I may set up one for IRC nicks
but only if you want it.

Would anyone use this page?

I am setting a page up for the Red Dwarf newsgroup and Friends
newsgroup and I needed to set on up for the atari one.

Get sending me your ICQ uins :)
Stuart

Message-ID: <vbTepAATCAwzMwgf@shaw1.demon.co.uk>
Source record: 120034

In article <868216694_OASIS_@ping.be>, Martin Byttebier
<Martin.Byttebier@ping.be> writes

>>All I need to know is 2 things.
>>Do you want me to do it?
>Make LTN working on a TT. AFAIR I couldn't get LTN working on my TT
>even in monochrome mode.

I had trouble with it on all machines but the ST.
That was because I wasn't using the GFA COmpiler.

I am thinking of doing LTN in C so that may then work on
the TT. I have started it in GFA but there are
a few more programmes with it so they may be in
C if I can work out how to programme in it :)

The best way to get it to work on a TT may be to
compile it on one!

Would anyone do that if I needed you to??

Talk soon

But when I tried AntMail half the time it wouldn't even let me put mails in the queue. It suggested the Mailout folder (or whatever it's name was) was not in the right place (it *was* in the right place) and said "queue failed". I gave up on Antmail completely and have been experimenting with Newsie, which doesn't seem to have problems for me.

Well,well,well...

The short answer is the IRS. I have 10,000 other answers, but the IRS cancelled 260 millon dollars worth of tax deductions because of the way the JTS/Atari merger was written ;(C'est la Vie... Yes, the Tramiels are involved :(

My Falcon is under repair installing the Nemesis board, so I'm using my 1040ST as of the moment. Hopefully, I'll finish the upgrade without turning my Falcon into a door stop :)

SUBJ: drivers for the HP5L

r> I just bought a HP5L and like to make the most of it.

Good choice, ive got one.

r> Does anyone knowwhere I can get drivers for Calamus SL, NVDI and Papyrus.

You can use the HP4L drivers from both NVDI and Papyrus.

r> While I am at it: where do I find the PCL-codes to use? (Setting the
r> printer in Ecomode.)

You'd have to buy the book.

r> Is it true that the tonercartridge can be refilled?

I dont fancy trying myself, this one is still in use ATM, touch wood also.

I once had a simple 358 byte program called qtos.prg (by Branch always software) that would run the TOS.IMG 1.0 file when placed in the same directory. The disk has become corrupted (possibly by Win95 and may still be readable by a PC). It worked nice, I will try to salvage it.

Rick.

This is a common fault - don't go and buy a new kbd yet! I can't
recall what the (simple) fix is - I guess someone else will say.

In the meantime just clean-up the rollers inside the mouse. They often
get ridges of dirt on them which will make your mouse indecisive :)

Just format the flopies, ON THE PC!!!, to the appropriate size for the
ST. Probably 720Kb unless your dad still has a single sided drive
(360Kb).

Hi!

On Flinny's STIK-STUFF-PAGE is mentioned a new version of STIK. It's called STIK ASM and it is updated at the 8th of June 97.

Does anyone know something about this version? .Is it the new PPP-Version of STIK?

Please write me an e-mail a an article in this group.

Martin,

My Falcon is 14megs and have a friend that is having the same problem, trying to get Outline Art 3.0 to run in 256 color mode. There is a PRG that is put in the AUTO folder to get Calamus SL to run in 256 color mode and it works great on my Falcon. Is there a similar program that will work with Outline Art? Is it even possible to run Outline art 3.0 in 256 color mode?

uber comes from german and is really spelled ber. It means something
like "over", bermench (sp?) means overman or superhuman.

We are a New York based international photo agency representing professional and amateur photographers in search of having their work promoted in order to conduct their profession or hobby minus the time consuming inconvenience of presenting and selling their own work.
You do not have to be a professional photographer to sell your photographic work successfully, and as any pro will tell you, quite often throughout history an amateur stumbles on a scene that he or she photographs and ends up with a photo that becomes a classic. Those who publish magazines, books, newspapers, greeting cards, record albums, or just about anyone who works with images in their profession, are in desperate need of fresh material, and are more than willing to review photos submitted by professional photo representatives. Sometimes the photos of amateurs are sought after more so than professionals because of accidental originality and innovative themes.
At Photo Phoenix International, we delight in and value the work of people who view photography as a fine art and understand a photo representative's significance in terms of a photographer's career, reputation, and monetary gain.
The photos we are seeking are some of the following: ANIMALS, ARCHITECTURE, ART, AUTOMOBILES, BUSINESS, CELEBRITIES, DOCUMENTARY, ENTERTAINMENT, EROTICA/NUDITY, FASHION, FOOD, HEALTH, HISTORY, HOBBIES, OUTDOORS, PEOPLE, POLITICAL, PORTRAITS, STILL LIFES, RELIGIOUS, SCIENCE, SPORTS, TRAVEL . . .
Whether your work portrays conservative, experimental, stylish, or innovative themes, your project proposal should be well thought out before submitting to us.
For first contact, submit a query letter and "SAMPLES ONLY" of your photos.
You must include "2" self addressed, stamped envelopes--one for correspondence, the other for the return of your material should we not be interested.
If we think your work is sellable, we will respond as soon as possible. Do not send entire portfolio unless we ask for it.
SEND TO: Photo Phoenix International

One-Number service puts you in control of your calls while ensuring that your calls, messages and faxes reach you regardless of your location. One-Number service does this by linking your existing telephones, cell phones, pagers, and fax machines through a single telephone number.

YOUR One-Number ACCOUNT COMES STANDARD WITH THESE FEATURES
- Consolidates your phone, fax, voice-mail and paging services
- Works with your existing products and services, no need to change
- Easily lets you designate yourself as available or unavailable
- Rings you at up to three numbers simultaneously
- Never-busy number accepts multiple incoming calls and faxes
- Call Screening (by name) lets you know who is calling
- Call Waiting lets you know somebody else is calling
- Call Move lets you easily transfer calls among different phones
- Call Conferencing allows conferences with other parties
- Fax Notification on your pager for incoming fax messages
- Redirect calls to Personal Operator (live person) if desired
- AND MUCH MORE

Virtual Office Communications Company is not a phone company, a long distance carrier, nor do we sell telephone equipment, cellular phones, cellular service, pager or pager service.
Instead, we offer service to integrate your existing products, adding value to what you already have by letting your phones, pagers, fax machines and voice-mail systems work together seamlessly.

To learn more please visit our web site at: http://www.mynumber.com

Please do not reply by e-mail as we are not set up to respond to e-mail requests.

206. POPwatch 2.03 released

Newsgroup: comp.sys.atari.st
Date: 1997-07-06 00:00:00 UTC
From: gary@the-gap.demon.co.uk
Message-ID: <39756923_000003_OASIS_NEWS@the-gap.demon.co.uk>
Source record: 120120
Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

The latest version of POPwatch is now available from my web pages.

Version 2.03 fixes several bugs, such as:

Sending NOS emails created by the NOS Mailer (not Oasis1.xx) caused POPwatch to hang.

Sending emails to SMTP servers that support ESMTP used to cause POPwatch to hang.

If you have experienced either of the above problems, then please download version 2.03 from my web site!

Regards, Gary

>PPP-Version of STIK?

No! You're very confused! The file you are talking about is on the
Developers page *not* the download page. The developers page contains the
relevant macros, .h files. etc. that people need to write STiK clients.
It is most definately *not* a new version of STiK!!
The actual STIKASM file you are talking about is the relevant assembler
macros and includes for writing STiK clients. I know this because I upgraded
the original STIKASM, which was *very* buggy, and that is what you have
spotted!!

Once again, This IS NOT a new STiK version and does not have PPP!!

Try alternative desktop like TeraDesk (last version is 1.40A).
It has an option for waiting a key after un .tos program was running.
It is FREE, fast and small. With use of a rsc editor, you can add
yours own icon...

That's been a long time...

From what I remember you have to click to start the catapult moving and then
click again at exactly the right time. There's no 'aiming', just good timing.
I remember I used to know exactly at which pixel I had to fire the boulders!

Yes there's a very old PC utility that does just that. It's called MS-DOS or something like that... Can't remember where to find it though... ;-)

Only joking. Just format a floppy on the PC in 720K (double density) format. If your dad's ST has a double sided floppy drive it will work perfectly.

If he has a single sided drive, you're in trouble, because PC can't format single sided 360K floppies. He has to either upgrade his drive (He can use a regular PC one) or try a serial connection with your PC to transfer the files.

You only have to format the floppy to 720 format on the PC
then copy the files from the PC to the floppy.

230. Newsie and binaries.....

Newsgroup: comp.sys.atari.st
Date: 1997-07-07 00:00:00 UTC
From: Simon@husbands.demon.co.uk
Message-ID: <868280670_OASIS_@husbands.demon.co.uk>
Source record: 120052

Hi - I wonder if anyoner can advise me!

I've been trying to download some clipart files from one of the newsgroups and as I'd rather see what I'm about to download first, rather than downloading 'blind' as Oasis 1.35 does, I thought I'd give Newsie a go.

Everything connects up OK and I can get to see the headers for all the postings. However, I have two problems. When I click on a particular posting that contains a binary file, it will most often download it but without a header and when I click on 'extract' it tells me it can't find the binary. Also, when it downloads with a header that looks OK, and I go to extract the binary, Newsie stops, telling me it has reached the end of file line too early, and of course the graphic is then only half complete or less.

Any ideas? Thanks to anyone who can help!

bobmcphail@aol.com (BobMcPhail) inquired:

B > 2) Is there a basic word processing program I can find
B > somewhere that will be compatible with the STacy?

STacy runs a pretty ordinary version of TOS 1.04, Rainbow TOS, and there is very little that won't run on rainbow.

'Basic word processor' - I'm not sure what you mean by this, but for typing words in and shoving the result around, a text editor (Everest, Edith, STeno, Editplus) is the right answer. If you want fancy printed output, you'll need 2M of ram, or more, to run Atari Works, PageSTream, or Papyrus. A good compromise (if you can find a printer driver for your printer) is Marcel; and it will run fine with 1Meg.

It could be a couple of things. I assume you are using the same SMPTE rate on each machine.. :)

One way to check if it's a word clock issue: Take a cord from the SPDIF output of the VS880 to the SPDIF input of the Falcon (you do have one, don't you?) and set Logic up to clock from the SPDIF port. See if that helps. If the problem is not solved, you have a time code issue. If the problem goes away, it's a clock issue.. you should always be running it that way anyway (when you're not recording through the digital output, of course.

234. 2-chip SIMMs for TT

Newsgroup: comp.sys.atari.st
Date: 1997-07-07 00:00:00 UTC
From: nroughley@unix.dsoe.com
Message-ID: <5prnt0$3ch$1@news.gt.ca>
Source record: 120056

I put four 30-pin 4MB 2-chip SIMMs into my TT (with Atari's RAM board). The fella at the Mac shop said these SIMMs 'should work'. After installing them in-shop, the TOS bootup screen showed the new memory installed and I got a normal desktop. After a few simple tests, I thought everything was fine and bought the SIMMs.

At home, I found the RAM to be flaky. After a few minutes within an application, the TT crashes or I get video garbage.

The jumpers are set as was posted here in c.s.a.s.:

W01 W02 W03 W04 W05 W06

1-2 1-2 2-3 2-3 1-2 1-2

Luckily, I have the option of returning these SIMMs. Before I do, is there any chance I've done something wrong besides going with the 2-chip SIMMs instead of 8-chip? The fella did say the 2-chip SIMMs were non-parity and could replace the 8-chip in-kind. He's surprised they don't work properly.

I can get the 8-chip SIMMs but they must be custom-ordered by this Mac shop (no chance of refund). If I tell them to order 30-pin 4MB 8-chip non-parity SIMMs will I get the right ones? Or is there something more I should specify? With no refund, I want to get the right kind since the 2-chip ones are most likely incompatible.

Thanks for any help.

I am reposting a message from about a week ago. I have removed sold items and added a couple of new ones. Most items are for the 8bit era. I am looking to sell outright for cash or will also consider some trades...see list at the end of the post. Here is the updated post.

I have the following Computer components and cartridges for sale. If you are interested in something, please make me an offer in U.S. Funds (buyer pays shipping). All the equipment is in working condition, but without boxes unless noted.

Coleco Adam
==========

Hardware
-Adam add on for Colecovision

Adam Data Packs
AdamLink
Black data Pack
Buck Rogers-Planet of Zoom
Letters & Forms-With box and Manuals
SmartBasic
SmartLogo-With box and Manuals

Commodore
==========

Hardware
-Commodore 64 Computer-With original box and Power Supply
-Commodore 64 Computer-With Original Power Supply, missing Run/Stop key.

Cartridges
-Clowns
-Jungle Hunt
-Kickman
-Lazarian
-Number Nabber Shape Grabber
-Omega Race
-Radar Rat Race
-Sea Wolf
-Serpentine
-Tooth Invaders

Amiga Hardware
-Custom made 15 foot Amiga RGB/Audio to SONY XBR/XBR II Monitor/Audio cable

Controllers
-Please see the controller section near the end of this post

Magazines
-Please see the Assorted Magazine section near the end of this post

Atari
==========

Hardware
-Atari 800XL With Power Supply, RF Cable
-Atari 600XL With Power Supply, RF Cable
-Atari 1050 Disk Drive With Power Supply and connection cable
-Atari 1050 Disk Drive Without Power Supply
-Indus GT Disk Drive Without Power Supply and connection cable
-Atari 520 ST Missing all accesories
-Custom made Atari RGB to SONY XBR/XBR II Monitor Cable
-Custom made Atari ST Composite Video/Audio cable (standard RCA jacks)

Controllers
-Please see the controller section near the end of this post

Cartridges
Atari Writer
Basic
Centipede
Defender
Donkey Kong
Donkey Kong Junior
Eastern Front (1941)
Final Legacy
Frogger
Miner 2049er
Missle Command
Ms. Pacman
Pac-Man
Pole Position
Qbert
Realsports Football

-Compute Issue 73 June 1986

Trades
==========
I may consider trades in the following areas, however sales at this point are more appealing to me and will take priority. As far as trades go, I am interested in the following categories...

Intellivision Rare Hardware and cartridges as well as Shrinkwrapped cartridges
Sears Tele-Games Shrinkwrapped Tele-Games (Intellivision) cartridges
Vectrex Hardware, Controllers and cartridges
Atari Lynx Hardware and cartridges
Atari Portfolio Hardware and accessories
Mattel Electronics Handhelds (especially Backgammon and Spead Freak), Aquarius computer items, etc.
Coleco Handhelds and tabletops, Total Control 4 carts as well as some ColecoVision items
Microvision Hardware and cartridges

Is QTOS now a free or PD program? I have Quick Tools Vol. 1 but it's not
on the disk. And I doubt Branch Aways(now called Emulators Inc) would
still carry it or even care. So can anyone send me a copy? I'll be very
grateful.

I know...very obsolete to even think of running TOS 1.0, but some old
games are worth running, no? :)

Does anyone remember a game called Purple Saturn Day? By the guys who
did Captain Blood. I forget their name then but they're called Cryo
now.

Anyway, I guess it was fairly crap but it did have a couple of
excellent little puzzle games. It doesn't appear in any FTP archive
I've seen, does anyone know where I can get hold of a copy?

went thru the mill on this almost a year ago now... the bottom line being that _none_ of the 2 chip/3 chip Simms worked in my TT; they all froze it after about 4 minutes.

the 8 chip/9 chip (with parity) all seemed to work fine, although various other posters reported difficulties with some manufacturers. If possible try to find a place that will indeed take them back if they don't work as some TT's appear to be more finicky than others.

Yea, my provider went to PPP only as of this month. Luckily I also got the use of a Pentium 200 for a few weeks, but once that goes away, I guess I'll have to look to buying something that handles PPP connections. (Hardware, since software seems to be not forthcoming.) There are lots of promises for PPP connections on TOS, but no one really has come through. I'm sure everyone is doing their best, but it seems PPP is more than TOS can handle. Three companies talked about releasing software in May, and here it is July & all three are talking about another month or 2 or 3 ... Or is that years? :) :)

Yes. But if he has not got a hard disc he might find message storage a
bit inconvenient.

>2) If he buys a quick modem will the atari run it at a speed
>it can handle. eg. 56,000 modem run on 14,400??

Depends on the ST model. The bog-standard ST/F/M will not run a modem
above 14k4 DCE unless a small hardware mod. is made (RSVE/F). He will
also need to install HSMODEM.

hello experts,

i'm planing to to connect an atari tt8 to an existing nt/w95 -
ethernet netwok - here my questions :

1. what harware do i need for the tt8 (networking card ?) and where
can i get such a thing .

2. what software do i need to use at least the harddisks, cd-roms,
worms, printers, modems and isdn-cards on the pc based part of the
network - via tcp/ip.

3. as i use a swichboard to use just 1 keyboard,1 mouse and 1monitor
on up to 6 different pc's at the sysops room - can there be a solution
for the tt either - means using a com port mouse and a standard pc
keyboard on the tt - monitor should work as far as i remember my atary
days ...

huuuuuu, mind you but mintnet does exist for tos and works with ppp
since few years already. This is what I use everyday, works fast, VERY
fast, has one of the best tcp/ip stack(even better than the linux
one, coz comes from Netbsd stack). It's free.
And contrarily to what some ppl could say, it is pretty easy to set
up, Actually I installed ppp/mintnet faster than my stik/slip.
bye.
Me and internet? no problem at all. do you have problems?

PPP works just fine on any Atari with enough memory. All you need to do is
load MiNT/MultiTOS/MiNTnet/GlueSTiK. There is a new cab ovl for MiNTnet
(1.81) that is very fast and allows more web pages to load. Almost any
program that uses STiK will work fine with GlueSTiK. CAB 1.50, CAB 2.0, NEWSie,
AntMail, aftp, duftp, forecast, finger, telnet, check_m, and popwatch all work
fine. The best thing about using MultiTOS is being about to multitask. I
can un-zip a download while downloading the next one. I can view a picture
for a news group while reading the next one. I can check my e-mail while
waiting for a big web page to load. I hope GlueSTiK is upgraded when the
new STiK comes out.

Does the game work on an STE with 4Meg of memory?
My version seems to hang/crash at different places, from one game to the
next. Usually after about 4mins playing.

I thought it was the system it was running on rather than a corrupt disk.

Well, that's NOT true.
I have a PPP connection running under 'MiNTnet'.
The PPPkit is a place to start.
Under MiNTnet you can get a VERY fast WWW access with
CAB 1.5 + CAB-for-MiNTnet-1.81.
(There seem to be bugs in CAB 2.0.)
With GlueSTiK, you can use STiK clients like Newsie, FRACIRC etc.

Then STiNG and STiK are coming up with PPP soon (they say).
So you HAVE options.
Don't give up!

Get pppkit14.zip found at ftp://ftp.teleport.com/users/atari/pppkit14.zip
and you can use PPP now. It installs a version of MiNT, but doesn't
require special MiniXS file system partitions. Works great.

When I had dealings with them a few months ago, Dave told me he did have an
email address, but he wasn't sure what it was. In fact he seemed surprised to
hear about Ataris and the Internet in general, and I ended up sending him a disc
with Oasis and Cab on it for him to have a look at as he'd never heard of them!

I suspect his email may NOT be the first thing he checks in the mornings!

Great store, though.

No. The ST interface is ACSI to the SH205. Inside the 205 there is an
adapter which converts to an old HD standard - not SCSI!

>I want some files of it, but my ST just won't start anymore.
>The powersuply is dead.

If they are important you could take the HD to someone who has a
working ST. Or it could be worth fixing the PSU or taking temporary
power from, for instance, a PC power supply, just to get it going for
long enough.

Source record: 119994
Cross-posted to: comp.sys.atari.programmer,comp.sys.atari.st

I've just taken the possibly foolish option and upgraded my Falcon from MagiC5.03 to 5.11!

Of course, in true MagiC tradition, there are *no* upgrade instructions and *no* docs at all about what the differences between these two versions are!!

Why do these arrogant programmers feel there is no need to document version changes. What bloody planet are they on????

System Solutions seem to be plugging the fact it's MagiC 5.1 (but as they've already screwed up my upgrade, I suspect they will be of no use in telling me what the differences are). They could almost be Microsoft Dealers for the amount of knowledge they seem to posses about what they sell!!!!!!!

Can anyone in these groups:

a) List the differences between 5.03 and 5.11?
b) Tell me where I can find programmer docs for 5.11?
c) Tell me how to turn *off* the 'realtime' windows. Lovely at first, but now becoming annoying!!

Gary

NVDI 4.11 comes with a number of HP drivers, but they only go up to the HP 4L.

Is a driver for the HP 6L printer available for NVDI, or will one of the existing drivers be sufficient?

Any help would be much appreciated.

I've got a Monitor Master for sale - $10 US (includes postage in US/Canada).

It's a little gray box accessory with 2 monitor in jacks & 1 mon out cable coming out of the back, with a connector that plugs in the ST. There's a black button on the front to switch between color & mono monitors (also reboots the ST when you switch over, as I remember..)

It's in exc cond, and just sits there since I sold my color monitor a while back..

Thanks for reading.

Keep up the fight ||| I love my country
or lose the right... / | \ but I fear my government

It only stands to reason that where there's sacrifice, there's someone
collecting the sacrificial offerings. Where there's service, there is
someone being served. Make no mistake about it, the man who speaks to
you of sacrifice is speaking of slaves and masters - and he intends to
be the master.
-- Ayn Rand

WAUG -- A Washtenaw Area Computer Users Group

What is WAUG? Over 12 years ago a few intrepid individuals decided to
============= start meeting regularly to share their enthusiasm and
knowledge of computers and related hardware/software
items. In June of 1987, after more than two years of unorganized and
informal meetings, the members developed and formally accepted a club
charter. Thus WAUG was born! Helping people get the most out of their
computer is WAUG's purpose.

Initially, the club was dominated by Atari afficionados, however in June
of '95 the executive board arranged to expand the club's resources to
include IBM and Macintosh users. WAUG is an ideal place to meet with
other persons who share your interests and to find answers to your
questions about using your computer -- no matter what machine you own,
how old it is, or your level of expertise.

Who's involved? Since its inception, members from cities outside Ann
=============== Arbor (including Westland, Canton, Livonia, Milford,
New Hudson, Dearborn, Hartford, and even as far away as
Toledo) have regularly attended the meetings. Some members live as far
away as central Michigan, and one member lived in Montana (!) and joined
simply because he enjoyed receiving our monthly newsletter.

How do I join? Membership in WAUG has only one requirement: an active
============== interest in personal computers. Annual dues are $15,
for which the member receives free monthly issues of the
club newsletter, opportunites to win valuable door prizes, and reduced
rates on disks purchased from the club's Public Domain/Shareware disk
libraries.

What will I find? A different topic is featured each month: Printers,
================= Education, Telecomm & the Internet, Beginners Woes,
Desktop Publishing, Scanners, Swap Night, MIDI &
Music, and Utilities are typical examples of what you'll find when you
visit WAUG. Drawings for door prizes take place at every meeting, and
the annual Christmas Party Meeting is not to be missed. There is no
dress code in effect at any of the WAUG meetings -- tuxedos and ballroom
gowns are perfectly acceptable. (However if you choose to wear these, we
WILL stare at you!)

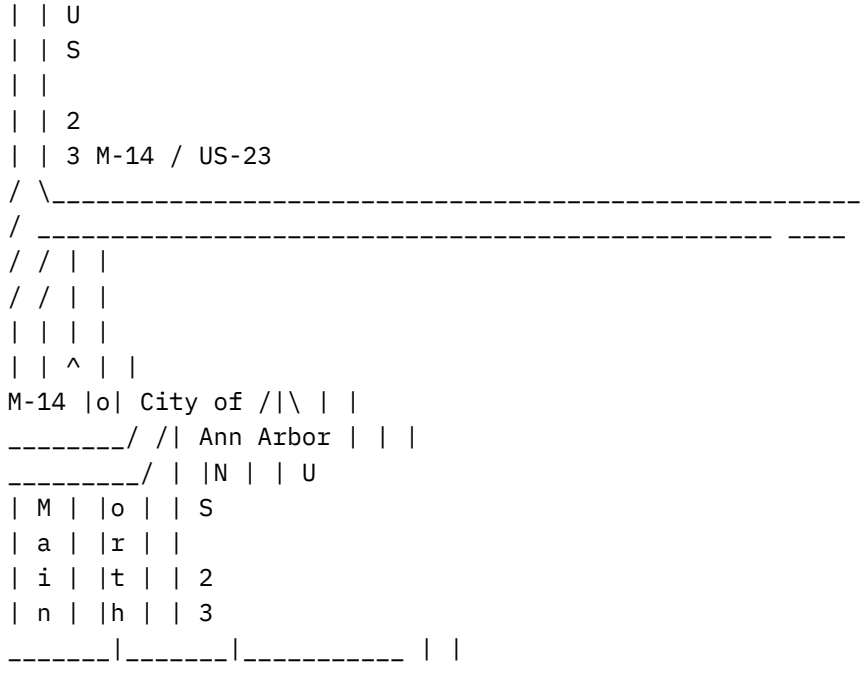
How to contact WAUG:
====================

WAUG
14 Payeur
Ann Arbor, MI
48108

Voice: 313/971-8576
Modem: 313/971-6035
E-Mail: molin@atari.archive.umich.edu
harvey@mail.ic.net
WWW: http://ic.net/~harvey/waug.htm

or just show up at any regular monthly meeting! Visitors are
welcome and we promise not to pressure you to join until we've seen your
face at least three times!

Where does WAUG meet? Meetings are held regularly on the second Tuesday
====================== of each month at Colonial Lanes located on South
South Industrial St. (across from Kroger) between
Stadium and Eisenhower streets. Meetings start at 7:30pm and usually run
to 9:30pm.



Travelling on US-23: exit onto westbound Washtenaw
(northbound) stay left at Stadium
turn south onto South Industrial

Travelling on US-23: follow M-14 West "To Ann Arbor"
(southbound) exit onto southbound Main Street
turn east onto Stadium
turn south onto South Industrial

Travelling on I-94: exit onto northbound State Street
turn east onto Eisenhower
turn north onto South Industrial.

Hi Mario,

They were very prompt with the order I made about six months ago.
I haven't contacted them since, but another Falcon user said he has
had contact recently. There was some confusion when I had sent email
requesting a shipping date, and was responded to in the N/G under
some abstract subject I just happen to see by chance. I would estimate
that it took about six or seven weeks for the order to be completed
once I transfered the funds.

moin moin,

Geeseh, I went to the coast (big deal to me as I live in the desert:) this
week, surfed on some waves actually made of water and forgot why I had asked
this question. Probably, the reason is along the same lines that Harry stated.
I think I was also trying to work around a conflict with memory location as
well, but I'll have to try to crash the machine this week to remember:_)

Paul, is the manual that comes with ver 2.2SE the closeout small manual?
Its really an Amiga manual. If so that would explain a lot.

283. How to use Fcopy to create PaCifiST .ST files

Newsgroup: comp.sys.atari.st
Date: 1997-07-09 00:00:00 UTC
From: USER <bnr4065@iol.ie>
Message-ID: <01bc8cac$5bb54080$LocalHost@bnr4065.iol.ie>
Source record: 119931
Cross-posted to: comp.emulators.misc,comp.sys.atari.st

(Don't know if this hasn't been posted before, but here it goes)
PaCifiST is excellent at running ST games, but the biggest problem is that the PC will simply not read most game's disks.
On the ST a program like Fastcopy Pro is able to read almost any disk and create an 'disk image' from it.
The problem is that FCopy's disk image is not in a slightly different format than PaCifiST's .ST files.
Anyway, all you have to do to get PaCifiST to work is to 'strip' the first 32 bytes from a Fastcopy Pro 'diskimage' and then rename the file .ST and it will work.
Of course, if the original disk was copy protected just getting an image across may not be enough. However, even if you know that you'd not normally be able to copy the disk on the ST give it a try anyhow - you never know it might work. For example Ghouls'n'Ghosts comes on two low density disks and I was never able to create a working backup copy on the ST. But when I transferred them to the PC, PaCifiST ran them without any problems - I guess that PaCifiST doesn't emulate the ST floppy controller 100% and hence fools G'n'G's copy protection!
BTW, Ghouls'n'Ghosts shows off PaCifiST's Yamaha YM emulation superbly.
Does anyone know of a definite list of things that PaCifiST can run?

On of my favourite ST games of all time is Bloodwych. But no matter what I try, I can't get PaCifiST to run it. I suspect a lot of it has to do with its 'wonderful' Rob Northern Protection. Anyway, if anyone has got it to work please post how!
As an aside, was Bloodwych ever released on the PC? If yes, was it any good?

Well Folks,

After all the great input from everyone (thanks a bunch!), I decided to buy a used 2.5"
from a computer store in the area call 'Computer Renaissance' (very cool place). Anyhow,
I was able to find an older IBM 270MB IDE drive for $80 which is just fantastic. I didn't
realize how incredibly SLOW the 80MB Connor I had was until I got this thing. Quite
a chipper little bugger.

Popped it in, formatted and paritioned w/HDX and off I went. Linux/m68k 2.0.29 now runs
quite happily on my Falcon. I could do with more memory, though. What's the current
situation in the marketplace for upgrading a Falcon w/4MB? 8MB would be fine.....
Any suggestions?

Ok, I give:). Again I thought to abandon my excellent STicK
setup for one of those darn fangled 72 file connection programs:).
I know eight hours isn't a whole lot, and I think i'm pretty close
(at least the old mint is working on the A/B), but i'll be damned
if I can figure out why the chat is failing. The examples are pretty
clear, but i'm a little lost as to if I "have" to use a comms app
to get the connection going, or if the .scr file does the job. In the
examples the dial up is commented out, so I tried both ways. I tried
with and without the modem cpx. 115200 (150) and 57600 (134) in both
flavors. I was able to command the modem thru Connect so there is no
port problem. All I am able to get through mintnet is chat failed,
it doesnt even get to the "AT" commands (modem never goes off hook).
If I hookup with Connect, then switch to script file in drive u,
once launched it disconnects. All the paths look right and such.
It's got to be right in front of me, but I just don't see it.
So Rich, what did ja do to get it to work? Follow the directions?:)
I guess it's not to important to me right now. My ISP just upgraded
their newsserver with new software and seperated it from the rest of
the system. My cps display looks like Craig Breedloves fuel gauge even
with Slip.

I offer $1. There. Now you have a "best offer".

You can give it to someone, or a needy organization. You could also tell
somebody your general location so someone might pick it up, but you might
live up to your name and simply waste it for spite.

: Web Browsing?..I used to run the Original CAB and Stik on a one meg
: STFM with no problems at all (honest), but recently trying to help a
: contact setup with CAB 1.5 and stik.. we just cant get it going and
: are hoping his memory upgrade will do the trick, So if you do have
: problems installing CAB you may want to lok for a really OLD version

I just set CAB 1.5 and the latest STiK up on a 1 Meg machine with a HD
(don't remember exactly which driver he was using, I think ICD), and it
worked fine. He didn't own NVDI, so he has only the system font, and
probably can't print web pages, but otherwise everything worked fine. I
did have to disable Warp9, as memory was getting tight.

I haven't tried CAB 2 on anything lese than my 4 meg Falcon, but 1.5 is
widely available, seeing as it is the last freeware version. And who
know, v. 2 might work, I just haven't tried it.

Another option might be WEN Suite, if they continue with it. Right now it
doesn't do Newsgroups and e-mail, just the web. I know a new version has
been nearly done for a while now, but I'm geting impatient to see it!

297. CAB 1.5v

Newsgroup: comp.sys.atari.st
Date: 1997-07-09 00:00:00 UTC
From: Scott Harris <harris@cs.mun.ca>
Message-ID: <Pine.SUN.3.95q.970709021426.9681A-100000@ganymede.cs.mun.ca>
Source record: 120005

Hi everyone,

I'm using CAB 1.5v on a MEGA/STE to surf the internet. I've been trying to get CAB to print for some time now and I've installed AMCGDOS 3.11 to do it. It prints the text fine, but when trying to print pictures all the text gets thown all over thepalce and know pictures are ever printed. Also I've tried the GDOS 1.1v but that won't allow me to select fonts in CAB. The system assumes only the 6x6 system font is avalible. When trying to print with META.SYS installed the program bombs and just sends me back to the desktop.

Also any programs around that will let me view movies/animations/sound over the net through CAB 1.5v. If so where can I obtain em.

Thanks for the help.

Scott.

I am presently using CAB 2.0 demo. I have always been able to print from CAB, in color or B&W, with images or without. I recently tried to print a page with frames, and the following was sent to my printer:

"You are not using a frames compatible browser."

And a page eject. Nothing else. What gives? Where does this message originate? How does it get sent to my printer? And most importantly, is there any way to print frame sites with CAB 2.0?

From: epkrgdh@epk.ericsson.se
Message-ID: <5pv753$5u8@newstoo.ericsson.se>
Source record: 120007

It's a 2.1 Gb SCSI drive which needs bus arbitration.
- I formatted the disk with HDdriver and partioned it into
two partitions.
- I boot from my E-IDE with hddriver and I have configured
hddriver as use bus arbitration and my computer as ID#7.

It finds the partions, but don't open them.

Others I have are Seagate HAWK 1 Gb on ID#0
Syquest EZ-135 on ID#1
Yamaha CD-burner on ID#4
Toshiba CD-ROM on ID#6

I have tried to disconnect 1Gb, EZ and it doesn't work anyway.
The 2 Gb is set NOT NO USE TERMINATORS.

Any idea?

Gaven Miller (gmiller@inca.co.nz) wrote:

: AFAICR, Disc-TOS 1.0 was a single sided disc with 80 tracks. The TOS 1.0
: TOS.IMG file was 206-odd thousand bytes long. (1.04's IMG was 196588-ish
: in size). This would leave around 150k of free space on disc, which, I
: believe, was used for the control panel, VT-52 emulator, and sample app.

bingo. the boot code always looked for an executable boot sector;
it was the boot sector that was responsible for walking the root
directory and loading TOS.IMG (or whatever the heck you wanted).
later ROMs did this for AHDI devices, too

the image file shrank because we were taking the *miserable* output
of the DRI / alcyon C compiler and hand-optimizing it so it would fit
into the 192K of ROM. it's amazing what you can peephole optimize
with a sed script, before you dig into the real muck

incidentally, the original ROM estimates were 128K, *with* a built-
in BASIC interpreter. ha. hoo. "it is to laugh..."

: In a moment of weakness/curiousity I found that Disc-TOS 1.0 and TOS 1.04
: on-disc aren't usable on the TT [which has TOS 3.05]

right. the exception stack frame layout changed going from the
68000 to later processors, and every trap handler in the OS fell down
and went boom

This happened to my 1040STf a year ago. I took apart the keyboard (be careful not to lose the little rubber key caps underneath the keys). The soldering on the mouse port had become cracked from the stress of removing and plugging in the mouse over the years (since it's in such a *STUPID* place, grr....)

To get at the mouse port soldering, you have to remove all the screws from the keyboard PCB and take it apart. Then just re-heat the solder joints and perhaps add a bit of solder, if it looks too weak.
Also, the 1040STe at my mom's place last week started going nuts and it turned out to be a loose keyboard chip (the HC6301 CPU on the underside of the keyboard). I just pried it out and re-seated it.

Hi!

In article <5pv753$5u8@newstoo.ericsson.se>,
epkrgdh@epk.ericsson.se (Ronny Gardh) writes:
> - I formatted the disk with HDdriver and partioned it into
> two partitions.
> [...]
> It finds the partions, but don't open them.
If you mean that you can't open the partitions with the desktop, there
is a possible reason for this:

You haven't partitioned with "minimal sector size" set, which is
essential for partitions of such a size. Also note that the maximum
legal partition size for TOS 4.04 is a bit less then 1 Gig, because
otherwise the clusters have to be 64K in size which is beyond the GEMDOS
specifications (it seems to work on the Falcon, though, but I strongly
recommend not to do so, because software like Kobold or disk optimizers
may get screwed up then). Thus, it's better to partition the drive into
three partitions which are all smaller then 1 Gig (e.g. only 1020 megs).
And make sure you've selected "minimal sector size" before clicking OK in
the partition dialog.

Btw, there's really no need to format modern drives. Just partition them.

> I have tried to disconnect 1Gb, EZ and it doesn't work anyway.
> The 2 Gb is set NOT NO USE TERMINATORS.
This does not say anything if you don't tell us what physical position
the drive has in your SCSI chain.

Ciao

Thomas

: Yea, my provider went to PPP only as of this month. Luckily I also got the
: use of a Pentium 200 for a few weeks, but once that goes away, I guess I'll
: have to look to buying something that handles PPP connections. (Hardware,
: since software seems to be not forthcoming.) There are lots of promises for
: PPP connections on TOS, but no one really has come through. I'm sure
: everyone is doing their best, but it seems PPP is more than TOS can handle.
: Three companies talked about releasing software in May, and here it is July
: & all three are talking about another month or 2 or 3 ... Or is that years?
: :) :)

I can relate, but I must add that PPP is possible on TOS without question.
Mint-net does it very nicely! I personaly haven't put myself through the
education process necissary to get MINT up and running "properly" because
I've been lucky enough to have a "reasonable" provider who supports Slip
(and a lot of other old and oddball protocols as well). I did install TAF
once, and the PPP part worked like a dream, so I know it's possible.
Maybe you should give the PPPkit a try as it doesn't require a minix
partition and all that jazz.

Finally, there must be other providers near you? Those guys that don't
support something as standard and wide-spread as slip don't deserve your
buissness. Putting it simply, they're either jerks, or they don't know
what they're doing. In fact, I'd be inclined to mail the CEO of your
particular provider and explain to him why disableing slip would be
similar in stupidity to MicroSoft releaseing a version of Windows 97
that wont run DOS or older windows software! Just because something is
old doesn't mean it doesn't work!

>bit inconvenient.

If he has a HD on a one meg machine then surely there would not be enough memory left to run Stik and Newsie or CAB ? So I would presume NO hd ?

If he takes loads and loads of newsgroups and only checks one time a week then he has little chance of success with news on a floppy system... however less newsgroups, lets say all the ATARI ones and he should be alright... or more newsgroups but more regular checks and he will still be alright, This is from experience,

Web Browsing?..I used to run the Original CAB and Stik on a one meg STFM with no problems at all (honest), but recently trying to help a contact setup with CAB 1.5 and stik.. we just cant get it going and are hoping his memory upgrade will do the trick, So if you do have problems installing CAB you may want to lok for a really OLD version :)

Well, yes and yes... In these parts, there are no ISPs running SLIP (and only one offering text/shell access, and that's the freenet - go figure) protocol anymore, and when you phone them up, you get to speak to someone who has no idea what you're talking about - and completely looses it when you suggest that there might be another platform than Windows or maybe the Mac.

I see it as a general trend in "dumbing down" the Internet, which has the side effect, in smaller markets, of keeping online connectivity a luxury consumer item, with the accompanying high fees. When I lived in Toronto, I had a wonderful provider: Shell, Slip, PPP access (you choose), 5 megs online storage, free web page, folder for batch files and scripts, EVERY news group, ISP, WWW, FTP, gopher, etc., etc. I move to Calgary and the largest, most widely advertised provider only offers PPP, with no chance of text/shell access, and the rates are twice as much per month as what I was paying in Toronto. Now, granted that there is a difference in the size of the market, and therefore the amount of competition, but it really cheeses me off that what was formerly a competitive, service driven industry, is devolving into a complacent, "take it or leave it", Windows based world.

If one more helpline moron tells me I can't use an Atari to access the internet...

Thanks for letting me blow off steam.

Hi Vacuo,

Yes, it was a lot of work to get the Falcon to where it is. The video
card (NOVA) is actually very easy to install. It just plugs into the
PDS. The drivers are very compatible with most DTP and graphics software.
GEM games work fine. The NOVA is just a ATI Mach 64 ISA card. They are
hard to get in North America now as the ATI cards themselves have been
discontinued. Computerinsl (sp) in Germany developes the adapter and
drivers. HOMA Systems House in Canada is the contact in North America.
Basically it is the same thing that TT owners have been able to utilize
for quite some time.
The 040 card is easy to install as well. Doug Little's 040 drivers give
quite the user several choices as to how they want their machine setup.
The Nemesis is difficult to install, but once up and running is worth the
effort for the increased speed it offers across the board.
It boils down to how much do you like the Atari world. I like it a lot,
more than I dislike Mac O/S and Windows:). So for me there was never any

other choice:).

Thanks Andreas :)

I'd also like to apologise for the slightly aggressive tone of my original posting. :)

I was just frustrated that I've upgraded from 5.03 and there is absolutely no mention on the disks as to what the changes are!!

Can you possibly answer that for me??

BTW, I've been using MagiC5.11 for a couple of days now and I'm really starting to like the windows. :) It also seems to be a lot more stable than 5.03. I haven't had a crash yet, and my terrible bootup problems seem to have disappeared too!!

Regards, Gary

319. July 26th Indy Show FAQ File

Newsgroup: comp.sys.atari.st
Date: 1997-07-09 00:00:00 UTC
From: Erasmus Nospamm <erasmus@anti-spamm.world>
Message-ID: <Pine.GSO.3.96.970709145442.12362C-100000@iglou2>
Source record: 120027
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

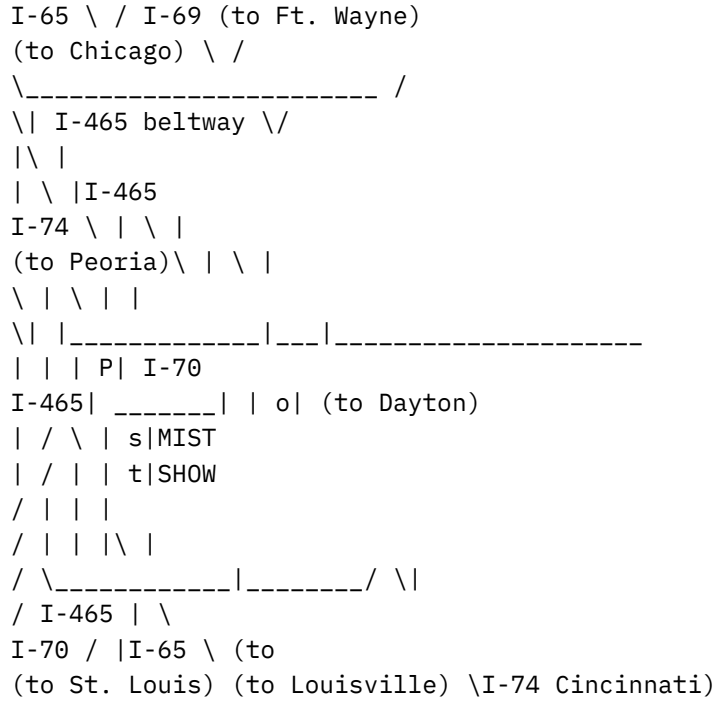
WHAT: 9th annual (final) MIST Atari Show.

WHERE: Indianapolis, Indiana, USA.

WHEN: Saturday, July 26. 10 am to 3 pm, Indiana time. (Same as
Central Daylight time.)

SITE: Post Road Community Center, 1313 South Post Road.

DIRECTIONS: Post Road is located between exit 90 of I-70 and
exit 96 of I-74, outside the I-465 beltway, on the southeastern side
of the Indianapolis area. See map below.



ORGANIZERS: Charlie Sears (317-535-4829), csears at doe dot state
dot in dot us. Jeff Hammer (317-244-8492), jghammer at indyunix dot
iupui dot edu. Stu Huffman (812-988-7558), shuffman at doe dot state
dot in dot us. ADMISSION: $1.

>>> ANSWERS TO FREQUENTLY ASKED QUESTIONS <<<

Q: Who is this show for?
A: All Atarians.

Q: Does that include me? I have a ______ [FILL IN NAME] Atari
[CHOOSE ONE] computer / game machine / other product.

A: Yes.

Q: Can other people attend? For example, people interested in
buying state-of-the-art or antiquarian computer products from the
various vendors represented at the show?
A: Yes.

Q: Do I have to be an Atarian to attend the show?
A: No. Your dollar is as good as any other dollar.

Q: Are there other things to do in exciting Indianapolis while
I'm there for the MIST show?
A: You'd be surprised.

Q: Why am I seeing this message more than once?
A: Because there's more than one Atari newsgroup.

Q: Why is this message posted on all the Atari newsgroups?
A: Because it's an Atari show.

Q: But which newsgroup is it really appropriate for?
A: All of them.

Q: So why isn't it crossposted to all of them simultaneously?
A: In that case many people wouldn't see this message at all.
Filters commonly weed out messages with multiple crosspostings.

Q: Why is this the last show?
A: If everybody reading this shows up, maybe it won't be.

(This message posted independently by Erasmus at the eskimo hut.
Send flames to Erasmus, not to the show organizers.)

320. Help, I'm desperate

Newsgroup: comp.sys.atari.st

I can't go without it any more.

When I was a kid, I used to play a game on a mate's ST. It was a superb thing called 'Colonial Conquest'.

I need to play it again. Can anyone help me with a ripped disk image, or even where I can find a copy to buy so I can take an image to play on PaCifiST.

Please help, as I said, I'm desperate.

Sounds to me as though you don't have a proper ASSIGN.SYS with fonts
and drivers identified.

> tried it in both...and it still goes haywire...any clues?

Could you be more specific about that? I don't have any ST at hand to
try mouse behavior in the second port. It could be many things:
- bad mouse electronic/mechanic/cable
- bad solderjoints at mouse port
- oxidized socket connections at keyboard controller....

And many other things. If you have one of those universal models with
ATARI/AMIGA switch, check its position. Amiga's setting would cause
totally uncontrolled movement of the mouse, because Amiga mouse has two
signals regarding motional control interchanged. This also means that
you can easily persuade ordinary Amiga mouse to work with Atari...

> Problem 2: I've got an SF354 floppy hooked up to the 520ST. The drive
> reads the disks (I can see the files.) but when I try to execute a
> program file or read a file it gives me an error message saying that the
> drive isnt responding...and to check the connections. The connections
> are fine...but the drive may not be...any help?

You have single sided drive. It manages to read the root direktory, but
can't reach the data on the upper side. Change it for double sided. Any
PC flopy should do. I use Mitsumi, because it's the cheapest and best
option around here. But be aware of the fact, that PC floppies are set
to be the second drive. For ST, you should change the jumper settings to
first drive. So it might be a good idea to check if new drive has
jumpers to be set (some new drives are preset to second pos.) before you
buy it!
It is no big deal, even with jumperless drive there are ways around, but
it is the easiest way.

What's more, if you are not afraid to do some soldering, you can
probably expand capabilities of your ST to format it in HD- up to some
1.76 Mb. All that almost without any component required!That is, if the
FDC in your machine can cope with double frequency clock. I tried it on
many ST's and it worked in cca. 50-60% machines and on every MEGA ST
(did some 20 of those) i tried!

324. Was: NEWSie problems

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: 180deg@Warp9.Mr.Scott
Message-ID: <5q3a7l$jr0$1@ash.ridgecrest.ca.us>
Source record: 119882

Just a shortie this time:). I found that disabling the instruction
cache on my Falcon (040) improved Newsies reliability to 100%.
I thought it was a memory problem at first, but there must be
something not getting flushed in the cache, or old information is
being used. I can't verify this on my 030 Falcon at the moment, but
it seems consistant now.
The fast ram problem with ImageCopy I found only occurs if NEWSie is
only allowed to utilize ST ram for memory, and run from fast ram.

Maybe we need an "030" version?

Mike

For printing images you'll need NVDI (V3.x or better V4.x). BTW it is
mentioned in the docs that printing images will not work with most
GDOS versions. This is the reason why you can switch off printing
images.

>
>Simon
>

Sometimes on usenet large files are split into several parts, it sounds
as though the files that extract and then stop with end of file before
end are the first parts of multipart messages.
Check the header to see if it says anywhere, usually after the file
name, (1/x) where x is the number of parts.
The rest of the parts will not have a begin line so will not be
recognized as an encoded file hence "no binary found". As the encoding
software with Newsie cannot automatically rebuild multipart messages,
then this has to be done manually using a text editor.

Hope this is of some help

Regards Mike

I need some help playing Railroad Tycoon. How do you build track? It has
been a few years since I last played and I forget. I went through a divorce
last year and I'm still waiting for my ex to give me my property. My
original copy of Railroad Tycoon is still in her possesion. My TT was
loaned out and I had the game installed on the hard drive. I'm trying to
play Railroad Tycoon because I blew it and did a format on the drive I had my only
copy of Civilization on. My ex has all my computers, software, books, and
everything else. Just so you know, I played Railroad Tycoon and
Civilization so many times, I am able to pass the copy protection test
without using the manuals.

Thanks in advance for any help!

Unfortunately, many Atari developers aren't willing or able
to update their software according to common enhanced standard
developments.

On the internet, the progressive JPEG format is rather common
nowadays, but you'll hardly find any Atari software which
supports it. 1stGuide, of course, does it for a long time,
and only recently I noticed that the latest Atari Web Browsers
have provision for p-JPEG support.

> I have to use 1st View to view the JPEG's,

Oops, it would be new to me that 1stView could load JPEGs at all.
I guess you mean 1stGuide (see http://www.esc.de/homes/guivol/1stguide/
for the latest version).

> but then they take a long time to
> load, and I can't convert them to any other format, which I
> need to be able to load them into my DTP package for what I
> need to use them for. Does anyone know if there is an update
> JPEG driver to GEMVIEW, or have any other solution?

There's a command line utility called 'jpegtran' as part of the
current Independent JPEG Group's software which can do this job
appropriately.
The IJG software is primarily distributed in source code form
(see below for links), and I have no problem to use it on my Atari.
I don't know if there are up-to-date binary distributions for
Atari available, I've mostly seen outdated packages.

At least for the next official IJG distribution I will care for
provision of such packages, since I've now taken over the Atari
port.

Well, for now you could also try my new JPEG-LAB for online
JPEG conversion:

http://www.reporter.de/jpeg-lab.html

It can read progressive JPEGs and will return a plain 'regular'
(baseline/sequential) JPEG file anyway at the moment.

The unique feature of this tool is the addition of some basic
lossless image transformation options to the 'normal' jpegtran
functions. I developed these algorithms for my own needs and also
made the (portable!) implementation source code publicly available.
It will possibly be incorporated accordingly in the next IJG
distribution.
(Heck, I didn't come across anyone in the Atari domain yet to talk
about such topics...)

Regards,
Guido

I've no idea. I just bought v5.11 from Systems Solutions in the UK.
But as the MagiC team never tell us what the changes are, who can say if
you're missing something or not :(

It does seem a lot more stable than 5.03 though :)
Which is funny, 'cos I thought the poor stability of 5.03 was not due to
crap code but due to my 'dodgy Falcon' :) Seems they must have sneaked into
my house and upgrade my Falcon when I wasn't looking :)

Gary

340. !!Falcon SCSI HD Questions!! [4th try-diff.server]

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: csh@falcon.sdi.agate.net
Message-ID: <868578450_OASIS_@falcon.sdi.agate.net>
Source record: 119898

I'm seriously considering buying a nice big external HD for my falcon to replace the long chain of old, small ones I have now...

I looked through a Mac magazine and have some questions:
1. "Wide" is a new standard that isn't compatible, right?
2. What is SCSI-3? Do those drives work with the Falcon?
3. The Quantum Fireballs seem to have the best price/size ratio, but I thought I heard something about FireBalls not working correctly with Ataris...any truth to this?
4. What exactly is "Active Termination"?...does that pose any problems or does it just mean I can dispose of my block terminator?

BTW, I'm currently using HDDriver v 4.something.

Also, can someone answer definatively whether or not I need a pass-through terminator at the _beginning_ of my SCSI chain? I thought the deal was to have termination at the beginning *and* end of the chain, and since there is no internal SCSI drive, wouldn't that mean terminating the beginning of the chain? I asked something similar to this before and got conflicting answers...

Eternal gratitude to all who respond...

Well, I don't, I've already got one, and I don't intend to sell !

However, if you have a spare mono monitor for the ST then a Mrs
Ridge would like to hear from you. She lives in Brighton, call
01273 514583.

This has been an ICTARI public service announcement,

Finicky is right, judging by the differences in what SIMMs work in the TT. Confusing to say the least, perhaps attributable to different RAM boards, motherboard revisions and the differences in the SIMMs themselves. I'm still waiting for my order of the 8-chip type to arrive. Someone here recommended trying burst mode 'on' with the 2-chip SIMMs -- I couldn't even get a desktop in that mode.

Besides running applications to see if everything's OK, what's the best way to test RAM on a TT? I did try a program called memspeed.tos with the 2-chip SIMMs; it didn't report any errors, even though it wrote to the RAM and read it back.

Also, I'm curious about speed: the SIMMs ordered were specified at 70ns. What's the speed of the 2 megs of factory TT RAM onboard?

344. Converting JPEGs

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: ws96ag@badger.ac.brocku.ca
Message-ID: <5q1hh8$eb8@butler.ac.BrockU.CA>
Source record: 119947

Hi. When I download certain JPEG files from the internet I cannot use GEMVIEW v3.15 to view them (I get the error message 'Bad Socket...'. I get the same error message when using JPEG1BIN.LZH or JPEG5ABN.ZOO, all of which I've downloaded from micros.hensa (in U.K.). I have to use 1st View to view the JPEG's, but then they take a long time to load, and I can't convert them to any other format, which I need to be able to load them into my DTP package for what I need to use them for. Does anyone know if there is an update JPEG driver to GEMVIEW, or have any other solution?

345. Re: Newsie and binaries.....

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: shammond@loop.com
Message-ID: <5q1gpa$8hp$1@usenet85.supernews.com>
Source record: 119948

On 7 Jul 97 13:04:30 GM, Simon Husbands wrote:

<Also, when it downloads
with a header that looks OK, and I go to extract the binary, Newsie stops,
telling me it has reached the end of file line too early, and of course the
graphic is then only half complete or less.>

Any ideas? Thanks to anyone who can help!

Simon,

It sounds like the "Preferences" for Newsie are not set correctly. Under
the "Preferences" menu select "Server Address and Options". In the
window you will see two lines - "Max.timout" and "from last character"
with a settable box (in seconds). I will lay odds that they are at the
default value of "0". Try putting in 30 seconds for each heading and see
if that helps. A value of "0" will cause Newsie to disconnect, or think
that the file is downloaded, if there is any pause in the data flow.

Regards,

Steve Hammond

346. A Internet question

S>
S> I have a few questions from a friend who is going on the net with a
S> atari.
S>
S> 1) Will 1mb get him on for email/web?

It's restrictive in that the images on a single WEB page are likely to be larger than the available RAM left after running STiK and CAB. Even with images turned off it'll be pretty tight. A hard drive is almost obligator

S> 2) If he buys a quick modem will the atari run it at a speed it can
S> handle. eg. 56,000 modem run on 14,400??

Depends on the Atari. A standard ST without any upgrade to the serial port won't really benefit from anything faster than 14k4. A TT, Falcon or Mega STe can cope up to 55k6, but the phone lines themselves can barely cope with 33k6 so I wouldn't go mad on a modem (nothwithstanding the current cost).

FWIW a 33k6 external Tashika Voice-Fax-Modem is currently 76.32ukp plus 6.85ukp for next day carriage (or collect from one of their 12 UK stores) from Software Warehouse and seems to be the best deal around atm. It works fine here.

n> application, the TT crashes or I get video garbage.

I get the same problem here using 72-pin SIMMs with an AixTT RAM board. The
TT seems to be particularly fussy about the type that's used.

I hear that "nibble mode" RAM is the one that's required...

Hi Steve,
I checked my setting and they are 60/30 seconds. When the error occurs, the
transfer rate looks good. What seems to be happining is the memory area
for the incomming file gets messed (laymen idea here) or not cleared for the
next file.
It is not consistant. Sometimes the problem comes up after only getting a few
files, and sometimes several can be downloaded before the problem comes up.
I got to thinking and removed the fast load (clear memory) flag from NEWSie.
I got through about 15 files before NEWSie quit. As I was having problems
getting large mails as well, I set up Antmail. NEWSie sometimes takes 30 seconds
or so to connect to my server for a mail check. Sometimes not. Today I jumped
from NEWSie to Antmail and Antmail got the mail immeditally while it took
NEWSie about a minute to get things going. This is not always the case, some
time NEWSie gets the mail right away.

Use BOOTCONF, available at acp5.chemie.uni-kl.de/pub/atari.
This is an application, not an ACC or CPX. An ACC or CPX probably
wouldn't work anyway because at least the desktop won't recognize the
new settings before rebooting.

You can easily use a 1.44M drive in 720K mode as a replacement drive.
Hallvart Tangeraas' homepage carries lots of info about doing that with a Sony drive. you'll find it at:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

Using the 1.44M drive in HD mode is a bit more complicated, but feasible.

Nick

356. PacifiST: Programming for GEM, TOS, MagiC, and MiNT

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: Peter Ross <eonicman@erols.com>
Message-ID: <33C4970C.2F67@erols.com>
Source record: 119959

Being that there is quite a pluthera of PC's and PacifiST is free; doesn't this mean that it would be easier for a company such as Netscape, Microsoft, or Progressive (RealAudio) could compile their programs to run on Atari and compatible systems? GCC 2.72 is available for TOS as well as quite an assortment of libraries. Would it be difficult for them to compile their applications to run on Atari's? As Apple finally stabs the knive into the heart of die hard 68030 based Mac users, they may opt that MagiCMac to breath new life into their systems (cheaply). Parx's free shared library system; M&E can prove to be a means of better supporting the variety of Atari compatible systems. Modules could be written to support DSP on Falcon's, 040's, PPC, as well as "classic" architecture such as Yamaha audio, ST joysticks, 68000, etc. It seems that with the advent of M&E, STiNG, ISA Plug & PLay, various MiNT enhancements, and in the near future; FeniX, things are starting to look up. Who knows, being that the GEM/MagiC market is pretty small, PacifiST running programmers may release that they could create programs that will run on the gazillions of '30 Macs as well as all Atari computers. ASH should release the current versions of the MagiC OS for $60.00 to attract the Mac users that can't afford to move up to PowerPC based computing. Sorry for my ramplings.

Eonicman

I checked the values out - sad to say, they were 60 and 30 respectively.

I'll up them to see if that does any good. I'm very puzzled - it seems like
often they are just coming through without any 'begin' line and without any
'end' line. I could understand this if I was downloading ,say, part 2 of a 3
parter, but the header tells me it's 'something.jpg' (1/1), so I'm not expecting
a previous or further part. It happens in about 956f the times I've tried. I'm
not sure how newsie deals with multiple parters, I have not even managed a
single parter yet!

Any other ideas?

Thanks - Simon

Hi Simon,
I did some more fiddleing. Try this. Leave the program flags set to fast load (for Newsie).
Change the NEWSie font to the system font (if it is not already set).
Under news reading options, set maximum articles to fetch to 30 or less.
If your on a Falcon,TT or accellerator card, turn off the CPU cache.
Make sure HSModem (your using it right?) drivn and scc is as close to the
end of the auto folder as you can put it. I also gave STiK a little more memory
in the default.cfg file in the STiK config folder. Also, for a slip connection,
try some slower settings like mtu=256, rec_wnd=2048,mss=216.
I was able to download about 30 encoded files ranging from 20k to 100k without
problem. Start with the 30 or less articles to fetch and cpu cache first and
see what happens.

359. DIY Nemesis Installation!

Newsgroup: comp.sys.atari.st
Date: 1997-07-10 00:00:00 UTC
From: csilver@kendaco.telebyte.NOSPAM.com
Message-ID: <5q28c6$75b@news.telebyte.com>
Source record: 119962

Hello Kemosabes,

I just finished installing Nemesis and it works. Whew! I must say I would NOT attempt this again. It's only with the e-mail help of Michael Grove that I was able to get this baby to bed. He saved my bacon several times. I did the recommended install putting the Nemesis board where the muffin fan was located.

I am interested if anyone else did a DIY install and their results. I'm just a hobbyist when it comes to computers, so this install was very challenging to say the least. I learned a bit more than I really wanted too. I must say that for Web surfing with CAB in TrueColor the results are quite stunning. The only thing I notice while using True-Color is that I get some very faint verticle lines about an half-inch apart when viewing jpeg's and gif's.

If anyone has any comments or similar results, please let me know :))

So far, so good...

Charles

Source record: 119963

Hi ALL (that seems to be a common name around here :-)

I'm having problems using aFTP & MG-FTP with a MSDOS based server. I don't see anything in the docs of either program about DOS or UNIX compatability. But I SEND the files for my webpage with aFTP and everything was fine. Trouble started when I SEND white-2_a.gif to the server. Then, All Hell Broke Loose. After that, I can't SEND, DELETE, RENAME anything on the server. Instead of the filenames, aFTP can only show the time ("03:43") of the files. Then with MG-FTP I can see the correct filenames, but can't delete or rename anything. The admin of the server is a well respected person who really can't see anything wrong on his end. Would DUFTP have any advantages in this respect?

This is a real problem affecting my business, and I would hate to go crying to a PC owner to "let me use his machine to get the job done".

An MSDOG-based server? Wow. Someone's a masochist.

see anything in the docs of either program about DOS or UNIX
compatability. But I SEND the files for my webpage with aFTP and
everything was fine. Trouble started when I SEND white-2_a.gif to the
server. Then, All Hell Broke Loose. After that, I can't SEND, DELETE,
RENAME anything on the server.

That would be the case if you no longer had write permission for the
directory. No, that can't be it: MSDOG doesn't have such a thing as
permissions on directories.

Instead of the filenames, aFTP can only
show the time ("03:43") of the files. Then with MG-FTP I can see the
correct filenames, but can't delete or rename anything.

Weird. Tell me, what do you see when you go to (say) rs.internic.net
and log in as user ftp? IOW is the problem confined to this one site
or is it general?

The admin of the
server is a well respected person who really can't see anything wrong on
his end. Would DUFTP have any advantages in this respect?

This is a real problem affecting my business, and I would hate to go
crying to a PC owner to "let me use his machine to get the job done".

If it really *is* MSDOG, could it be that by writing a file with more
than 8+3 letters in the name you've corrupted tge directory? No, that
would be too stupid ...

Ok...

Problem 1: Mouse works like Hell. It acts like it's in the wrong port (like say if you put a mouse in the joystick port of a 1040ST) but I've tried it in both...and it still goes haywire...any clues?

Problem 2: I've got an SF354 floppy hooked up to the 520ST. The drive reads the disks (I can see the files.) but when I try to execute a program file or read a file it gives me an error message saying that the drive isnt responding...and to check the connections. The connections are fine...but the drive may not be...any help?

Thanks a load.

Port.

>Any ideas? Thanks to anyone who can help!
>

This is a problem I have seen with NEWSie since I first started using it.
And yes I have reported it. If you look at a file that NEWSie loads only
part of, you will often see a "." at the end. For some reason NEWSie thinks
the "." means the long file has reached the end. This will happen every
time if a uuencoded or mime encoded file has a line that ends with a ".".
BTW, a blank line with just a "." does mean EOT. I'm sure NEWSie is looking
for this and that is what is causing the problem.

Because of this problem, I started using Pine3.96 for reading news. The
uudecode under MiNT is much better. I just received an e-mail yesterday
with a beta release of a product to test. It failed to decode using NEWSie,
so I switched to Pine and downloaded the e-mail and it decoded just fine.
NEWSie had pulled the full e-mail but the decode failed. I hope this helps.

It is not possible to print the whole page with all its frames
(BTW: this is also not possible in Netscape Navigator).

You can only print the content of each frame individual. Just
click inside the frame and choose "Print" in the popup.

I pulled this post from ba.market.computers. This guy is selling 9 chip simms which will work just fine in the TT. Anyone looking to upgrade their TT should watch the ba.market.computers news group for ram. Someone was selling 1GB scsi drives last week for $55 each for one or $50 each for more than one.

Newsgroups: ba.market.computers
Subject: FS: Used 4MB 30 Pin Simms (4x9)
Date: Wed, 09 Jul 1997 17:10:35 -0700
Organization: S3 Inc.

I have 12 pieces of pulled 4MB 30-pin Simms for sale.
They are 4x9 arranged with the speed of 70ns.

Four (matched) pieces - $64.00

or all 12 pieces - $180.00

shipping is extra if required.

> of that if a 720K drive will do.

Any standard drive will work. If you're expecting 1.44 mb, however, you need to modify your hardware; the FDC needs a 16 Mhz clock, and you should get an AJAX chip to replace the sock WD1772 FDC chip.

In most cases, since PC drives don't seem to have movable jumpers or DIP switches any more, you'll need to get a "twisted" floppy cable to replace/extend the internal cable, also. The easiest way is to get a short twisted (e.g., PC standard) floppy cable and a 34-pin double-male header, so you can plug the new cable into the end of the old one.

If you don't modify the FDC clock, you'll get 720k capacity with a 1.44 mb drive. RAM Turbo in Portland, OR may still have some 720 drives, but by the time you pay for postage and so on, you might just as well go to your local "Mom & Pop" PC shop and get a 1.44 - and you'll get it quicker. I would not pay more than $35 for a new drive. You might find a used one for less if you shop around.

You need a hard disk driver. AHDI is available from a nubmer of ftp
sites. HD Driver is the finest hard disk software you can buy for an ST
(contact Computer Direct in North America). There are others, but I see
no reason to use anything other than either the free stuff, or the very
best.

Hi Renald.

Most external modems will fit without any hassle. Choose one
HAYES compatible because most comms software use this codes. As your
machine can only reach 19.2 Kb without hardware modifications, I
recommend you to get a cheap 14.4 Kb, but if it's faster no problem. Just
avoid the WINmodems that use PC-specific hardware (most of them are
internal by the way). Brands... well with my old 1040 I used a lynkers
2400 and a brandless 14.4 faxmodem... now I have a Motorola 28.8 in my
falcon and it's fine. I hear of good experiences with supra, hayes and
US robotics modems.
About the software, without a HD, you will hardly do graphical WWW
browsing, so get a terminal program with good vt-100 emulation, like
connect (a little bit too much for a 1 meg 1040), Stalker (commercial),
or Uniterm. With this you can e-mail, read the news, IRC, and do
text-only WWW with Lynx, or connect to BBSs.

Hope this helps.

The sh204 is a bit OLD! Hope it still works. If you can find a bit
more cash it would be worth buying a decent host adapter (ICD Link
etc.) to which you can then attach various SCSI devices.

Yes, you will need driver s/w for the HD as it is not included in the
operating system. Normally you will find it on any used drive you buy.
If not the AHDI, ICD, Supra, CBHD stuff is all available PD.

If you ever get as far as attaching a SCSI CD-ROM you will need yet
more driver s/w!!

>Is there an utility program to read Macintosh floppys (720K) with an
>Atari 1040ST?

Try to find a copy of Macsee. With this utility you can use your Atari
to format a 720 k disk into Mac-format. MacSee is programmed by the
people of DMC-Germany.

If you understand German please read the following:

MacSEE kopiert Daten zwischen Ihrem ST/TT-System und einem
Macintosh-System. Sie k�nnen sowohl mit Disketten als auch
mit Wechsel- und Festplatten arbeiten. Damit sind Sie in der
Lage EPS- oder TIFF-Dateien auszutauschen und gemeinsam zu
nutzen.

With other words, with Macsee you can even use harddisk or removables.
I haven't try it with harddisk but with floppy's it works great

Hope this help.

BTW: Macsee is a copyrighted program

Hope this help.

>
Hi Michael - thanks for the tips. I'll check these thing out - I don't know how
to change the program flags anyway! I'm on an ST so I don't have a cpu cache.
but I can fiddle with Stik. I did just check to see what happened if I just got
the 30 articles and actually managed a good download, but with about 4 bad ones.
Same things - no begin line, no end lines (a mixture of both). But I'll keep
trying and let you know!

You may be right. I've always tried to avoid multi parters when testing this thing 'coz I know they can be confusing - so I choose either (1/1) files or files where there is no mention of being multi part. I just dunno.....

I'm going to tinker with my STiK config and see if that helps. More later.....

Thanks!

>Noticing your SIG, so on a 4meg STM or STE would you recommend no higher
>than MagiC 2 and NVDI 2? I mean as far as version number? Thanks

My strategy was not very rational, I'm afraid :)

I bought the v2's a few years ago for the STM and have never bothered
to upgrade them as they did all I wanted them to do.

The v4's came with the TT which I have only just acquired so they are
a bit of a bonus!

I would DEFINITELY recommend MagiC if you have more than 1Mb - and
second-hand copies of v2 can be had for £20 or less. If you have TOS
<1.4 then it's a better way of upgrading than buying replacement ROMs.

I've Added more stock to my Atari catalogs. So check it out.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

Following is only a partial list of what's in my Computer HardWare & SoftWare Catalogs. Everything mentioned on this list is on this list because I have multiples of these Items and I thought I'd list them for you. Especially if you wanted to buy More than one. So check it out!!!

Check out my Updated Atari Catalogs and find More Atari stuff! I've got HardWare for both Classic Atari 8 Bit & ST such as Gemini 10X Printers, Printer Stands, 9 Pin Panasonic Printers Ribbons, JoySticks & Under the Monitor Power Directors to Manage & Protect your Equipment. And Hardware specifically for the Classic Atari 8 Bit: 800XLs, Commodore CM-141 Monitors, Atari 1050 Disk Drives, Indus GT Smart Disk Drives, Paddles, Koala Pads, Atari CX85 Numeric KeyPads, SIO Cables and Direct Connect Printer Interfaces. HardWare specifically for the Atari ST: SLM 804 Laser Printers, Spectre GCR Macintosh Emulators, MonoChrome Monitors, Monitor Master Switch Boxes, Mouse Master Switch Boxes, Future (Indus) GT-100X Smart Disk Drives, Atari Double Sided SF314 Disk Drives, Advanced Gravis Mouse Stick Controller for the Amiga & Atari ST and Atari Mice. Game SoftWare for the Classic Atari 8 Bit: Battle of Antietam, Flight Simulator II and Scenery Disks,
Gorf, Maniac Miner, Missile Command, Pac Man, Rosen's Brigade, Space Eggs, Space Journey Math Educational Software, Target Practice, Temple of Apshai and Zork. Game Software for the Atari ST: Advanced Dungeons & Dragons-Heroes of the Lance, Arkanoid, Brataccas, Defender of the Crown, Flight Simulator II, Gauntlet, Kings Quest, Major Motion, The Pawn, S.D.I., Sherman M4, ST Karate, Ultima V, UMS I & II & World Championship Karate. Productivity Software for the Classic Atari 8 Bit: Atari Basic, Atari Writer, CardWare, Home Filing Manager, Home Pak, Invitation to Programming, Print Shop, SynCalc, SynFile+ and VisiCalc. Productivity Software for the Atari ST: Analyze SpreadSheet, DacEasy Accounting, Data Manager ST, Degas, Degas Elite, PageStream, ProCopy, Turbo ST and VIP Professional. Plus a wealth of Books and Reference Materials. This and more you'll find in my Atari Catalogs!

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

The last few versions of Newsie come with Munpack, which DOES deal
correctly with multipart messages. When it sees part of a multi, it stores
the part in TMP\PARTS\ect. Then later it will reconstruct the whole
message after it sees all the parts are there.

Tony & Martin...

If you want the silkscreener to something with your graphics, you need
to do Colour Separations from the print screen to get B&W pages, each
one representing the separate CYMK screens.

Don't you ?...well neither did I to be honest..until a few weeks
ago..I asked in these very newsgroups how much memory I should leave
if making a game for 4meg machines.. how much memory to leave free for
the HD... the general opinion from the couple of people who responded
was to leave half a meg...if not more?

Now you say you have Stik and CAB and a one meg machine with HD..
isnt life confusing? <smile>

>: Web Browsing?..I used to run the Original CAB and Stik on a one meg
>: STFM with no problems at all (honest), but recently trying to help a
>: contact setup with CAB 1.5 and stik.. we just cant get it going and

>I just set CAB 1.5 and the latest STiK up on a 1 Meg machine with a HD
>(don't remember exactly which driver he was using, I think ICD), and it

well the bit you snipped from my message did point out that it wasnt
neccaserrily impossible.. only that we couldnt manage it.. I didnt try
to say it couldnt be done and made a point of mentioning that...
So rather than simply saying ho yes it can?... can't you offer advice
on HOW its achieved ?

>worked fine. He didn't own NVDI, so he has only the system font, and
>probably can't print web pages, but otherwise everything worked fine. I
>did have to disable Warp9, as memory was getting tight.

well we tried CAB 1.5 on a one meg floppy syste.. set drive B as the
cache and the only thing running was stik...no NVDI or warp or
anything?

(hang about...so your mate is using a one meg machine..with HD and
warp9?....how much memory has he got left for running software then
?.. if you dont mind me asking.. just curious)

>I haven't tried CAB 2 on anything lese than my 4 meg Falcon, but 1.5 is
>widely available, seeing as it is the last freeware version. And who

yes we know that.... my point was that from experience i have used an
older version on one meg.. so offered that as a possible solution..

Oeps in my previous article I've made a little fault. Macsee on itself
isn't be able to format floppys. It's just a program that makes it
possible to copy things from mac floppy to atari and vice versa.

Indeed. I use PPP all the time with MiNT and MiNTnet, I wouldn't dream of
using any other setup. As the saying goes, "those who do not understand
Unix are doomed to reimplement it, badly." The MiNTnet socket code works
great, and the PPP support is standard off-the-shelf Unix freeware. I don't
know why people think they need to use the Minix filesystem just to load
a network driver; where do people get these crazy ideas?

On the other hand, you gain an awful lot by using the Minix filesystem
(or any other Unix-ish filesystem) - longer, case-sensitive filenames,
hard links, symbolic links, faster performance...

>that wont run DOS or older windows software! Just because something is
>old doesn't mean it doesn't work!

I'm sorry, but I cannot support this point of view. As a counter-argument,
"just because something is widespread (like, say, DOS? Windows?) doesn't
mean it works!"

PPP is a much better protocol in just about every way - more efficient, more flexible, more configurable... With SLIP, you have to carefully coordinate all the line parameters (such as header compression, protocol versions, etc.) with your ISP in advance. With PPP, all of the connection features can be dynamically negotiated. All you have to do is dial up and go. Anyone using SLIP today is just *begging* to be abused. There's no good reason to use it.

Hello. I have a 1040ST. Although it is getting a little long in the tooth (aren't they all :-) ?) I would still like to attach a hard drive to it.

Presumably, my options are:

1. Find an old Atari hard drive.
2. Find an ICD Host Adapter (I will likely soon be in the possession of a SCSI drive so a drive is optional).

Can anyone help me? I'd prefer to go with ICD. If anyone knows where I might obtain any of this I'd like to here from you.

Please respond by e-mail since I don't often have time to read news.

Thank-you

Hi,

I know this has been asked a thousand times before, but how do I get CAB to visit Web Sites online? Everytime I go to specify a URL (with and without a preceding "http://"), it keeps looking to disk for HTM files.

Also, when I go to use Telnet, I get the "connected" message and then I don't get the server login prompts and no response to commands.

Here's what I'm using: CAB v15, CAB OVL v2.1 (in the same dir as CAB.APP), STiK v1.12 and Telnet v1.00. I connect and establish a SLIP connection fine with STiK, but after that none of the apps seems to work.

Anything obvious in configurations that I missed that would explain these problems?

Thanks in advance.

: You can think of the Tramiels waht you want - sure, it's a shame what they did
: with the TT and the Falcon ... but don't forget Jack made the C64 a very
: successful computer - so it's wrong to say they always did everything wrong ...

He also ran Commadore into the ground...just like Atari.
Tramiels have always read the public about as wrong as possible since
the C64. The C64 worked because technology like that was really
expensive, and very much a novelty at the time. He cut every corner
possible and produced a neat little affordable toy for people to play
with. Personal computers have changed a lot since the C64 however, and
now he HAS to compete. Not really the case with the C64. It was so new,
that marketing wasn't even necissary...the wiz bang magazines came to
him...begging for a story. It don't work that way now...hasn't in a long
time, and that's why Tramel WASTED Commadore and Atari!

They also dropped the ball with the Jag in a big way. So what if it
was the hottest game machine on the market...people don't want it if
there are no GAMES to play in it! Pretty much what killed Atari PCs as
well...no software...angering and dissapearing dealers. Yep, it's
possible to "get by" without massive marketing campaigns...but only
if you KEEP DEALERS and current end consumers, and DEVELOPERS happy.

The 6L looks almost exactly like the 5L. It has a small footprint but I must say the Brother 660/760 units are nicer because they have a straight paper path. Try printing an envelope from a 5L or 6L and watch it curl up with the heat and curved paper path. I like the Brother although both printers seem to have gone to proprietary RAM for some reason.

Sending a file with that name will give you problems
MSDOS have 8+3 uppercase letters in the filenames.
MSDOS don't have any read/write permission flags
so you can not delete or rename the files on remote.

409. Floppyshop's New Email Address & Web Page

Newsgroup: comp.sys.atari.st
Date: 1997-07-11 00:00:00 UTC
From: Steve Delaney <sdelaney@zetnet.co.uk>
Message-ID: <sdelaney-1107970752550001@man-084.dialup.zetnet.co.uk>
Source record: 119906

Hi All,
Just a quick note to inform you that I have changed my ISP to
Zetnet with
immediate effect. The result is that the old Wintermute account will
be closing
down in a few weeks and any messages to my old address will bounce
back. Please
change my email address in your address books or yellow pages
immediately to
avoid confusion. Also, could those of you who maintain lists of email
addresses
for Atari users in your disk mags or on-line publications pleaseensure
that you
ammend your lists accordingly, thanks. The new address is:-

sdelaney@zetnet.co.uk

The main Floppyshop Web pages remain unchanged at the address in my
signature. I
have now added a new WWW page at Zetnet. It contains the full ST and
Falcon
catalogues as well as demo versions of most of our commercial
releases. Although
many of these were available at the old Wintermute address, the method
of accessing
them was cumbersome and unhelpful. Everything is now presented in html
format and
downloads require no more than a click onto the appropriate link. The
address is
as follows:-

http://www.users.zetnet.co.uk/sdelaney/downloads.html

As far as I know, everything on the site works fine. If you encounter
any
problems, please email me (sdelaney@zetnet.co.uk) with details. A
mention
for this new WWW page would be appreciated from those of you who
publish
magazines/disk mags/on-line publications.

Thank you for taking the time to read this message.

Regards
Steve Delaney

The idiot who designed the page didn't include a non-frames version,
and since all the frames are grouped together on one page, where the
only visible text is "You are not using a frames compatible browser.",
that's all the printer outputted. It would require extensive recoding
of the printing routines to enable output of several pages at once
(since that's what frames are). Most frames browsers print just your
currently selected frame, while CAB takes a different approach,
perhaps not a very well thought-out one.

Again, read the jpeg-faq to understand what's going on:

http://www.faqs.org/faqs/jpeg-faq/

Part 1:
Subject 11: What is progressive JPEG?
Subject 15: How do I recognize which file format I have, and what do I
do about it?
Part 2:
Subject 16: Which programs support progressive JPEG?

Excerpt from 1/15:
> If the file header seems valid, but your decoder chokes with a complaint
> like "Unsupported marker type 0xC2", then you have a progressive JPEG file
> and a non-progressive-capable decoder. See part 2 of this FAQ for
> information about more up-to-date programs.

And then you might complain about Atari developers who ignore such
topics
and who are, if at all, the latest to recognize this development
(but *not* me...).

Regards,
Guido

You need to use PC Exchange on the Mac, and format floppies in MSDOS 720K (double density) format. The ST should be able to read/write and so should the mac.

PC Exchange was an extension to MacOS System 7.something. Don't know where to find it on it's own, or if it works with an older MacOS.

You will need a serial connection and a Zterm program to transmit the files.
There are Zterm compatible clients on both platforms.

```
THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the
same questions over and over again, here is a quick list of the most
Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following
address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

418. Colonial Conquest

Newsgroup: comp.sys.atari.st
Date: 1997-07-11 00:00:00 UTC
From: Neil Islam <gbf67@dial.pipex.com>
Message-ID: <01bc8ded$baa25e60$52f482c1@powergenpc>
Source record: 119915
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech,ctdl.sys.atari.st

Does anyone know where I can get a copy of a game called Colonial Conquest.
IT was my favourate game on the ST and I have just got an old machine!

The jist of the game is that you are one of the main world powers and build
army and navy and attack countries in order to take over more and more
land. The game screen was a map of the world that scrolled sideways.

Please help!!

E-mail
gbf67@dial.pipex.com

Cheers
Neil

>>Nick

Nick,
thank you for your answer, but the problem is that I own a Macintosh SE and PC Exchange does not work on it. And also because I already have most of my files on floppies in Mac format, it is preferable for me to be able to read the disks directly with the Atari. So if there is a way to do this I would appreciate very much if you let me know. Or is there a utility for the Mac like PC Exchange that also works on the SE?

Thanks
Davide

420. Separating Color in Calamus SL

Newsgroup: comp.sys.atari.st
Date: 1997-07-11 00:00:00 UTC
From: t.poling2@genie.com
Message-ID: <5q5ap5$asg@rock101.genie.net>
Source record: 119917

Greetings...

I'm getting use to using color with Calamus SL and was wondering how I Could Separate the RGB colors in a Raster graphic so I would end up with three separate raster graphics in RED, GREEN and BLUE. I would then take these raster graphics into a silkscreen place and have them setup a three color silk screen print for T-shirts, posters and etc. Anybody know how this could be done?

-Tony-

Atari 1040ST?

(Shouldn't that be 800K?)

Not unless you count Spectre, which is a full-fledged Mac emulation,
requiring a hardware dongle and a set of MacOS ROMs to put in it.

Your best bet is to convert to DOS-style 720K discs on the Mac; I have
a utility to do this under System 6, email me at chris_gray@kiffer.eunet.be
if you need a copy. (I think it's freely distributable, I'll have to check).

Whether your Atari software will be able to do anything with the files is
another matter. :(

425. What's this on the Visual Assembleur page?

Newsgroup: comp.sys.atari.st
Date: 1997-07-11 00:00:00 UTC
From: szhays@boris.ucdavis.edu
Message-ID: <5q5nrf$99a$1@mark.ucdavis.edu>
Source record: 119922

First it was the Germans, they had all this cool software, but lots of it was enver translated into English. Very frustrating.

Now, its the French. I visit this site and I see all kinds of fascinating looking things, not the least of which is Netscape Navigator 3.0 running in a GEM window. And someone has taken the trouble to translate this page into English, but it doesn't explain the screenshots. I'd have to be able to read Stratos (the French language Atari magazine that comes with a CD each issue!) to get more information!

Want to see waht I'm talking about? Go to:

http://www.geocities.com/ResearchTriangle/4791/visual41.html

StraTOS, GigaFun, Centek, Dolmen, all kinds of developments I can't follow. Very frustrating.

It makes sense that it would, since data is transferrred to the SLM by way
of DMA, which doesn't work with Fast RAM.

Sounds to me like an (almost) broken wire in the mouse cable. Sometimes it's making contact and sometimes it isn't. Try an other mouse to see if that's the problem before you buy a new keyboard.

If it's in the keyboard try to solder the connection between the keyboard and the mouse connector. To do that you have to open the keyboard completely (lots of tiny screws).

Succes with the problem,

Hans

>Hi...!

Hello!

>I have some questions about standard ide interface for ST

The usual device interface is SCSI - this is well supported. The IDE interface is non-standard but 2 companies can supply. One is in Germany (I forget the details) the other in UK. The Upgrade Shop (01625-503448) supplies an IDE i/f for 60UKP.

However, ... I would recommend you take the SCSI route!!!

>-I heard that can use a PC power supply on ST...
>who have diagram? (send me it please)

You don't really need a diagram - a PC PSU will supply +5v and +12v which is just what a ST needs. There will also be enough capacity to power a number of other devices (HD, CD-ROM, streamer etc.)

Indeed, there are ST-MSA (and the other way round) converters, as well as utilities that write/read .ST images directly to/from disk (both for PC and the ST) I don't have a web adress handy right now, but look around on the www as they are available on many pacifist web pages.

Does anyone remember a game called Purple Saturn Day? By the guys who did Captain Blood. I forget their name then but they're called Cryo now.

Anyway, I guess it was fairly crap but it did have a couple of excellent little puzzle games. It doesn't appear in any FTP archive I've seen, does anyone know where I can get hold of a copy?

You need to either get a utility for the PC that can do the extended formatting, or just do as I did and convert the .ST files to MSA format and write them to disk from the ST.

Get a program called GrafTools ! It's one of the best viewers around and it
saves in a lot of formats. Best of all it's free. I believe the new version is
at ftp.tu-berlin.de and it's called GT970601.zip . If it's not there e-mail me
and I'll go looking around for you .

I've Oasis 2 since the beginning but I'm still unable to
use it online because it can't handle the ppp-protocol of my ISP.
But now with the coming of the excellent utility 'Popwatch 2.3' I'm using
Oasis 2.10 as reader/editor for my mail when I'm working under
MiNT/N-AES. Using Oasis 2.10 I discovered the great performance of the
program.
My question is now: is Oasis 2 still under developement of is it so good
as dead.

Regards
Martin

just try The Ultimate TOS Software Index at:
http://www.ping.be/~pin10575/PRG-IND.HTM

It changes virtually each week and with sometimes a lot of changes in
one week !!!!
I try to keep it up to date and soon it will be ordered by kind !!!
So many people were asking to change it that way !!!
so let's wait only a few days !

I've been using NEWSie since version (0.60) I think, quite successfully
>
>Does someone know why?
>Could it be the 68030 processor of my PAK?

Newsie 0.69 thruogh to 0.78 had a problem with (open offline post box)
this has been fixed in version 0.79 (when it is released).
In the meantime I think that you will find if you enable the taskbar
in the windows and select postbox from there then it will open
correctly, as for crashing when you select (get mail) I don't know,
never had a problem with this.
>
>How do I install NEWSie correctly?

just copy the files to any directory you choose then run NEWSie and
set the paths and servers etc, from the options menu then save options

>How do I get a list of available Newsgroups from my server?

Select (get full groups) from the Special menu

>Mario Becroft Auckland, New Zealand

Hi Mario. Good luck on your hunt. I myself have been searching for such a program for a while now, and this is what I have discovered:

There is a program called ZeroX (demo only available from most good ftp sites) which will do the job and much, much more, but is only available at commercial prices (about $200 US). The demo will not allow any saves so is not much use for transfers.

The program you refer to above will let you take a sample from ST to EPS but you will not be able to hear it! It simply uses each machine as a storage device ie you can take a sample from the EPS and store it on a disc formatted for the ST, and vice versa. The program is called EPS Disk Wizard and is available from the ftp site at oak.oakland.edu. It will also allow you to do some sound conversions too.

I have also heard about a program that might do the job, available from interval@netcom.com and will be trying to get details of it from them.

I have also tried enquiries to the eps digest group, but with no success. Basically the Midi routines for sample dumps for the EPS are not very well suopported either by Ensoniq or subsequently by authors writing dump programs. I have tried adapting programs myself with no success!

Hope this is useful - if you need any more info email me. If you find a program that will do it a little cheaper than ZeroX, let me know!

: that appear weekly.. I have never understood a single one.. does
: anyone ?.. if so then whats the secret code please <smile>

Its just a list of what has changed in the Atar section of the U. Mich.
ftp site. From the above list we can see that the only things that
changed were the various indexes. For a while, this has been the case. I
don't know why. I guess no one is sending anything to umich anymore. I
noticed the new MiNT interface for CAB was posted there, and I guess that
is because it was written by the chap that also seems to be maintaining
the Atari section at U Mich ;-)

This was once the definitive Atari site. Now we scramble from Cnam mirror
to Cnam mirror looking for the new stuff :-(

464. MIDI player

Newsgroup: comp.sys.atari.st
Date: 1997-07-12 00:00:00 UTC
From: Keith Cordon <kacey@mcmail.com>
Message-ID: <01bc8edc$a23590a0$7e0f2cc3@kacey-s>
Source record: 119837

Hi
Can anyone please e-mail me with details of (and where I might find) a simple MIDI file player for the ST. All I want to do is to be able to read a .mid file off floppy disk and play it, no editing, tempo change, etc required. The simpler the better because I may try to use it on stage without a monitor!?!
Please reply by email cause I don't get to read this group very often.
Many, many thanks.

Well if it's just posting any changed files then nothing has been uploaded :(
At least the listings (ls -lR is the UNIX command used I presume) and
other indexes have been remade.

It was much more useful when the Atari was a bit better supported.

Adrian

Well, it's not that TOS can't handle it, but PPP is a little tricky to implement.
On my case, I can tell why STinG's PPP is still not ready. STinG is such a young
package (8 months ago not a single line of source code for STinG existed), that
some more things are still to do to get some generic package, so that PPP is a
bit in the background, but it's still progressing.

Cheers Peter

4. HACKER CONVENTION
5. SEMINARS
6. OTHER ACTIVITIES
7. GENERAL RULES AT THE SHOW
8. WHY SHOULD I ATTEND NAS?
9. HOW YOU CAN FIND OUT MORE
----------------------------------------------------------------------

Dear Atari friends,

It's once again time for the Nordic Atari Show, the annual get together
which has rapidly become a fixture for all Atari users.

Third time lucky, so they say, and as we arrange the show for the
third straight year we hope to fulfill everyone's expectations and that
this will result in the best possible atmosphere. We've gotten a certain
amount of criticism, both positive and negative, from those who have
attended the shows in '95 and '96. We've taken heed of the suggestions
made and we're once again off and running!

1 - WHEN AND WHERE?

This year the show will begin on Friday, June 13 and end on Sunday,
June 15. This is the weekend following the beginning of the summer school
holidays as well as the weekend prior to the Swedish Midsummer
celebrations. We'll open at 12 p.m. on Friday and close at 6 p.m. on
Sunday.
```

NAS97 will be held at a school called LUNDBY GYMNASIUM at HISINGEN, GOTHENBURG. Hisingen is a large island very close to the main parts of Gothenburg. There are a lot of local transportations there.

A map for the route description can be found at www.tripnet.se/sak/nas

GOING BY TRAIN
The train arrives at Centralstationen. Take tram 2 (destination Biskopsgarden) at Nordstaden and get off at the stop Rambergsvallen. Signs will lead your way to LUNDBY GYMNASIUM.

GOING BY BOAT
Boats arrive near the tram stop Masthuggstorget. Take tram 3, 4 or 9 to Brunnsparken, then change to tram 2 (destination Biskopsgarden) or 5 (destination Lansmansgarden) and stop at Rambergsvallen. Signs will lead your way.

GOING BY PLANE
Take the airport bus to Centralstationen. Follow the instructions as under "going by train".

GOING BY CAR
Please have a look at the map, LUNDBY GYMNASIUM is nearby a large road and should not be hard to find.

2 - WHAT WILL IT COST?

If you intend to attend all three days, you cheapest solution is the Three Day Pass otherwise a Single Entry ticket will do:

* Three Day Pass ... SEK 150:- (about UKP 12,75)
* Single Entry ..... SEK 80:-

These prices include full access to all the activities being held during NAS97.

3 - EXHIBITION

The exhibition hall is open:
Friday 12-18, Saturday 11-20 and Sunday 11-18.

At the exhibition you can see:

DISK1 (Sweden)
Will be showing Jaguar games and other fun stuff for Atari.

Daggskimmer/Tom Thomason (Sweden)
Bo Leuf and Tom Thomason will be demonstrating Papyrus, Interface and other shareware products. Tom will also be handling registrations for those.

Peter Segerdahl
One of the authors of Zero-X, the fantastic sample editing program, shows how to use Zero-X the best way.

Thorsten Butschke (Germany)
As last year, Thorsten is here and showing and taking registrations for

shareware products and the magazine Atari Computing.

16/32 systems (England)
Nic Harlow has always been at NAS, so why any different this year?
He's showing CD:s for Atari, games and more.

Line Audio
Roger J?nsson shows the different JAM products and more for the musican.

SAK and SAK/Skane
The Swedish Atari Users' Association and the local department in Skane are here too, to show different programs and computer systems in action. SAK will sell T-shirts, PD-disks, have a soldering corner and a swap meeting too for those who whises to sell, buy or trade single items of interest.

4 - HACKER CONVENTION

Demogroups and other programmers can gather for competitions and swap demos and all kinds of code. NoCrew is the Swedish demo group who will see to it that everybody takes part and enjoy themselves. Those of you hungry after rewards in the form of prizes will be well taken care of. Exactly WHAT prizes these will be hasn't been established, as yet.

These are the competitions:
Wild compo
Unlimited demo compo

More detailed information will be sent out to all demogroups by NoCrew. You can also make contact directly to them at their homepage at www.nocrew.pp.se

5 - SEMINARS

Last years seminars were very much appreciated, something of which we naturally have taken notice.

The SEMINARS will be held from 12 p.m. on Saturday and hopefully some of them even on Friday or Sunday. But - please attend on Saturday if you don't want to miss any of them.

- Peter Rottengatter
- About STiNG and Internet
Peter is the author of STiNG (the follow-up to STiK), and he will talk about installation and practical use of this program, plus some general talk about Internet and software for Atari.

- Martin Graiter
- Hardware seminar
Martin is a hardware specialist with long practical experience repairing and servicing Atari computers.

- Mille Babic
- HTML and Internet access

Mille will talk about HTML, and show how this cryptical language
really works. He also gives a lesson about going through the net,
practically, with you Atari.

- Claes Holmerup
- The hardware behind digital recording
Claes was here last year also, and talked about digital mastering.
Now he shows a bit more about all that hardware that's required
to make a digital recordning. Claes will also show how CD burning
can be done with an Atari computer.

- Rolf Johansson
- Layout with Calamus SL
What is Calamus SL, and how can one use it? Rolf shows how the
club magazine is done, special functions and regulars in
the software plus a bit about the new version SL96.

- Ulf Hogberg, Rolf Johansson and others
- General Atari Questions
We will also have a little "chat" seminar where you can ask questions
about everything - and we'll try to answer them. Maybe this also
can become some form of a debate, we don't know right now. Please
attend, as we might need you help.

6 - MORE ACTIVITIES

* Minor competitions such as "A-Z on the Keyboard" (a much appreciated
contest last year), hard disk throwing (this year it WILL happen!),
network games, juggling, etc. Everything depends on our finding
volunteers to act as game leaders and referees. There will be prizes
for the winners.

* A refreshment stand will sell non-alcoholic drinks, sweets, chips,
etc. We CAN arrange quantity discounts at the local pizzeria, and
will take orders for this.

* Internet cafe, with possibilities to surf on the Internet, chat,
telnet or whatever that is legal. The cafe will be nearby the
"normal" cafe, or refreshment stand as written above.

7 - GENERAL RULES AT THE SHOW

* No smoking inside the building or by windows and doors.

* No alcohol, beer or anything like drugs will be tolerated inside
the show. Please have fun with that outside in the city, but not
at NAS97. All such things found will be confiscated.

* Keep a good attitude against other people and show your tickets
to the staff if asked for it.

Anyone breaking these rules or acting violently will be thrown
out of the show.

8 - WHY SHOULD I ATTEND NAS?

The answer is simple: because you care about the TOS platform. We Atari owners are becoming fewer and fewer and a get-together like NAS is a simple way of seeing what's happening in the Atari world (no, it's not dead!) and meeting like-minded Atarians and hearing what kind of tips, ideas and visions they have.

9 - HOW CAN I FIND OUT MORE?

Information will be distributed regularly in the same way as this text file. In addition, we have a number of other sources of information where you can find out more about the show depending on your own resources.

* Our mailing list (e-mail). This will provide the very latest information to those on the list. To have yourself put on the list you MUST have an e-mail address. Send us a message on "nas-users-request@tripnet.se" with "subscribe nas-users" in the body of the text. Don't forget to include your e-mail address.

* Our home page on the World Wide Web. This has been in existence since last year and we'll try to update it as often as the information for the mailing list. The home page will contain more detailed information concerning times, schedule of events, directions on how to get there, competitions and housing.

The address is "www.tripnet.se/sak/nas".

* STraight BBS. This is the Swedish Atari Club's home BBS. Information concerning NAS will be included in the SAK menu. You can also use this BBS to ask any questions you may have. The telephone number is:
+46 31-336 39 73.

* Our club magazine, "AtariMagasinet", will contain adverts with more detailed information concerning NAS97 in issues 1/97 and 2/97. This is the largest mailshot we will send to our (SAK's) members.

* Our show co-ordinator is Rolf Johansson. He's supposed to know everything there is to know about NAS97. If you have questions to which you've been unable to get answers anywhere else you can send him a message at "rojo@tripnet.se" and you'll get your answers. If you wish to get into direct contact with him, he can be reached on his mobile phone on
+46 70-669 52 35.

KEEP THE TOS PLATFORM ALIVE.
WE ARE LOOKING FORWARD TO SEE YOU AT THE NORDIC ATARI SHOW 1997!

>>you and call anyone's efforts, for whatever reason they may have been
>>undertaken, a waste of time.
>I.e. people who express an opinion. The UK's a free country,
>isn't Austria?

It is more specific than that. You can express opinions in many ways. In
that case it was a slightly arrogant way, which is what I pointed out.
It just sounds so simple-minded if you claim that someone is wasting his/her
time at doing something, if you misunderstand the motive behind this action.
(Hint: if the motive for writing an ST emulator is not to provide the "best"
emulation for the DOS-using game junkies or whatever, then I can't see how
the appearance of an excellent emulator like PacifiST should affect the
opinion someone else should have of their own emulator. Some people apparently
do *not* do these things for fame, fortune, or out of altruism. Strange, huh?)

It is also not very courteous, but I've learned to cope with that on
Usenet and the WWW where offending people you don't know is, unfortunately
in my understanding rarely an accident or matter of ignorance, but often
a result of channeling one's frustration with something into perhaps the
last medium where all rules of civilised communication can be forgotten.

Honestly, I don't expect you to behave in a reasonable way, nor do I have
to behave this way. You may express your opinion and I my own, the judgement
is left to the reader (the seasoned Usenet reader will probably spot the
first offensive rhetorical question aimed at my country of origin (or current
location), with the probability of occurrence of a reference to Hitler or
something similar later on being reduced only by this sentence). Some things
never change.

I know, it is my fault for taking things seriously and expecting manners where
not even I have to show any. Then again, there's so much time on my hands
and the pleasures of self-gratification are many and tempting, even if a bit
subtle occasionally.

471. Re: EPS 16+ sample dump/disc access etc. tool: where to obtain?

Newsgroup: comp.sys.atari.st
Date: 1997-07-13 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <T4EOCWF@tos.pl.net>
Source record: 119844

Mario Becroft (mb@tos.pl.net) wrote:
: I am looking for a tool for the Atari/TOS machines which enables samples
: to be transferred to and from the EPS 16+ sampler. I believe this tool
: also reads and writes EPS 16+ discs among other things.

Unfortunately I made a mistake in the previous description. I can better explain it by describing the problem I am trying to solve:

I have got 300 floppy discs containing sounds, banks, sequences etc. Shifting these to a hard disc is tedious, since the EPS 16+ requires the discs to be loaded into RAM and then saved to the hard disc one by one. I am looking for a tool for the Atari ST series that can read and write EPS discs (floppy discs and hard discs) as well as create macros and banks. The purpose of this is to make it possible to copy the contents of the discs to the EPS hard disc with ease.

Hopefully this software would function also as a comprehensive editor/librarian, not like, for example, Sound Designer which is so primitive it is not really useful.

Can anyone tell me where to obtain such software?

Hello,

After having received a lots of requests about the layout of the
ultimate TOS software index like this:

"Could you order the programs by kind ?"

I'm today decided to answer to these requests, as I'm already 83 year
old today, and tomorrow perhaps even older;

YES, I CAN DO IT !!!!
AND I HAVE DONE IT YESTERDAY IN THE EVENING !!!!!!

Then, you'll find now 8 pages linked to the main one which is always
the "menu" !

1. Section AUDIO/MIDI
2. section COMMUNICATION
3. section EMULATORS
4. section GAMES
5. section GRAPHICS
6. section PROGRAMMING
7. section TEXT EDITORS
8. section UTILITIES

and it's always at;

http://www.ping.be/~pin10575/PRG-IND.HTM

Don't hesitate to make any comment(s) if you have head ache (take an
effervescent ASPIRIN ...), if you have tooth ache (go to the dental
archeologist), if you want to send love messages to me (female only
for the moment), if you want to send belgian chocolate, if you like
the french cheese camember "La crotte du diable", if you know where
is buried the golden owl, if you have found the golden owl and you
don't know how to cut it in two pieces to give me the half, if you
don't find the leaden snail, if you are always searching where the
Titanic has dive, if you are searching for nothing at all, THEN ...

Write to me, I know everything, about everything and I can all for you,
Only one address:

DRUL K'HOR
"The illusion wheel"
Loosed well way, 0
X-111188869 VOID
e-mail: "++++++"@fuite en Egypte.ppffffffff

P.S: what's going on with me today ?

It simply tells what files are new or updated in the Atari Archive at
Umich. And nothing new has happened, except for the index files of the
FTP site being updated.

But why is this posted a month after the show is held? Is the CT mailbridge very slow or what?

It's still under development. Phil is continually improving OASIS and
Dave is still slogging on with ICE.

When will you eventually stop to ignore the problem?
Why don't you try to understand what the problem is?

Again for you:
The asker had to do with *Progressive JPEG* files, and neither GemView nor
GrafTool support this format! Period.

PLEASE read the jpeg-faq at http://www.faqs.org/faqs/jpeg-faq/ to understand
what's going on.
FAQs were introduced to avoid obsolete discussions, and it would be nice if
you recognized that.

Here again the corresponding excerpt from the FAQ:
> If the file header seems valid, but your decoder chokes with a complaint
> like "Unsupported marker type 0xC2", then you have a progressive JPEG file
> and a non-progressive-capable decoder. See part 2 of this FAQ for
> information about more up-to-date programs.

I'm sometimes wondering if people in the Atari domain are really unable to
understand such subjects. It would be nice if I ever came across somebody
in the Atari area who understood and cared about such advanced topics.

Regards,
Guido

I use Newsie which does mail, news-groups and FTP. You could try
Antmail but I didn't get a lot of joy with that. Each to his own :)

>What's the best software for connecting?

STiK is the most widely used and loads as an ACC.

STinG is an alternative - it is configurable through dialogues.

491. $$ LOAN BUSINESS, EASY MONTHLY INCOME, NO BRAINER $

Newsgroup: comp.sys.atari.st
Date: 1997-07-13 00:00:00 UTC
From: a6@a.a
Message-ID: <33c9227e.0@news.unibe.ch>
Source record: 119864

I have participated in the standard "Please put me on your mailing list" letter and found it to be worth
my time (I get 1 or 2 handfulls or letters every day) but I also found that it's results were nowhere
near what I expected due mainly to people not sending in the money but rather spreading the letter
without paying for it. I participated in that mainly as an experiment and found that there are a
tremendous amount of people willing to do it. I thought about how to, first, eliminate the "non-pay"
problem and, second, to create a monthly income. I came upon the solution and decided to start a new
program. I decided that there were 3 things that this new program needed in order to work for everyone
and they were: 1.) It needed to be very simple and easy for anyone to do, and, 2.) It needed to be
inexpensive enough for even the poorest of people, and, 3.) It needs to be DUPLICATABLE. I think you
will find this program to meet those requirements. I have put lots of thought into it and I ask that you
PLEASE do NOT modify it. This WILL WORK if you follow it. This system is based on the unconditional
"loaning" of money to people. Simply say, "I am loaning you this $2 as an act of goodwill to help you in
your financial need, you may pay me back if and when you can." You should find 5 or more people who will
send $2 to the 5 needy people on this list AND MAINTAIN 5 or more people who will do the same. You
should put your name on postition number 5 and move each of the other names up one position. The name
originally on position number 1 gets removed. You should be able to contact each of your 5 or more
people to see if they are going to be active this month. If not then you need to find one or more people
to be active in order to maintain at least 5. I am not speaking about the 5 people on the list but
rather the 5 new people you have found. I would highly suggest having more than 5 in any given month.
Now I know that this would be extremely easy to do since I can think of at least 20 people myself who
will do this consistently. The key is to maintain at LEAST 5 active people. If you don't then you can't
expect for the rest of the people to do it either and you can't expect for this system to work. This

system is a no-brainer, and if someone can't afford the $10 + stamps for this then they truly ARE in
need! It is OK to use the internet to find people but I think it would be easier to find them through
people that you know. This way it will be easier for you to contact them every month to ask about their
being active, unless someone is willing to give you their e-mail address. Here are some numbers:

Monthly income model per level and total for maintaining 4 active members @ $2 each:

Level 1: $2 x 4 people = $8, Total now $8
Level 2: $2 x 16 people = $32, Total now $8 + $32 = $40
Level 3: $2 x 64 people = $128, Total now $8 + $32 + $128 = $168
Level 4: $2 x 256 people = $512, Total now $8 + $32 + $128 + $512 = $680
Level 5: $2 x 1024 people = $2048, Total now $8 + $32 + $128 + $512 + $2048 = *** $2728 ***

Yearly income: $2728 x 12 months = $32,736

Monthly income model per level and total for maintaining 5 active members @ $2 each:

Level 1: $2 x 5 people = $10, Total now $10
Level 2: $2 x 25 people = $50, Total now $10 + $50 = $60
Level 3: $2 x 125 people = $250, Total now $10 + $50 + $250 = $310
Level 4: $2 x 500 people = $1000, Total now $10 + $50 + $250 + $1000 = $1310
Level 5: $2 x 2500 people = $5000, Total now $10 + $50 + $250 + $1000 + $5000 = *** $6310 ***

Yearly income: $6310 x 12 months = $75,720

Monthly income model per level and total for maintaining 6 active members @ $2 each:

Level 1: $2 x 6 people = $12, Total now $12
Level 2: $2 x 36 people = $72, Total now $12 + $72 = $84
Level 3: $2 x 216 people = $432, Total now $12 + $72 + $432 = $516
Level 4: $2 x 1296 people = $2592, Total now $12 + $72 + $432 + $2592 = $3108
Level 5: $2 x 7776 people = $15552, Total now $12 + $72 + $432 + $2592 + $15552 = *** $18660 ***

Yearly income: $18660 x 12 months = $223,920

Monthly income model per level and total for maintaining 7 active members @ $2 each:

Level 1: $2 x 7 people = $14, Total now $14
Level 2: $2 x 49 people = $98, Total now $14 + $98 = $112
Level 3: $2 x 343 people = $686, Total now $14 + $98 + $686 = $798
Level 4: $2 x 2401 people = $4802, Total now $14 + $98 + $686 + $4802 = $5600
Level 5: $2 x 16807 people = $33614, Total now $14 + $98 + $686 + $4802 + $33614 = ***

$39214 ***

Yearly income: $39214 x 12 months = $470,568

Keep in mind that it does not matter what day of the month that someone chooses to be active. It DOES
matter that they are active on that day EVERY month. The key to this is DUPLICATION! You must treat this
as a business. If you treat it like a hobby that is how it will treat you. You could even organize small
meetings with your people and their prospects and work with your leaders.
Think of how easy this would be for you, how reasonable this is, and of how good the chances are of it
working for you. You may need to hire someone to open all the envelopes.

NOTE: I decided on $2 instead of $1 because it is more feasible and it won't matter much for someone to
send $2 as opposed to $1. Also I was against $5 as that becomes too expensive to duplicate.

Mail $2 every month with a piece of paper saying "I am loaning you this $2 as an act of goodwill to help
you in your financial need, you may pay me back if and when you can" to the following needy people:

Davide Bionda <bionda@erdw.ethz.ch> asked:

> Is there an utility program to read Macintosh floppys (720K)
> with an Atari 1040ST?

You could try 'MacSee/MacRead' (same program, according to the docs
for MacRead). I was never able to get it to work, but I didn't try
very hard and have very few Mac floppies to try it with. Maybe it
will work for you.

I have a 1040ste with 2megs and a bunch of software, mostly games and a Star NX-1001 8 pin printer

if anyone is interested in it email me and make an offer on the computer, printer, software, or any combinaton. I'll let you know any specifics you need, such as game titles.

Some of games are
final fight >
pitfighter > a 3 pack of games
a wresting game>

street fighter 2
4 st format disks
police quest 2

Exciting news!

Unfortunately, in my case, I haven't been very successful with the
current STinG package. CAB and NEWSie both suffer "long" hangs which
don't occur under STiK. Often times NEWSie downloads empty mail
messages... I only get the header and a blank page.

Any suggestions on which settings to look at or change would be much
appreciated!

Thanks,

Pat

This would cause trouble where continuous streaming of data is important
(like DTD audio recording). Makes sense to me...

Same here. something that supports a straight drag & drop of
a .MID or passing of the file by another application (such as
CAB when it encounters a .MID on the web). is there such TTP?

504. Mega ST for sale

Newsgroup: comp.sys.atari.st
Date: 1997-07-14 00:00:00 UTC
From: Sam Ramirez <sramirez@best.com>
Message-ID: <33CB05DC.DC0E45FD@best.com>
Source record: 119681

I am selling my Atari Mega ST2. The system was upgraded from 2 to 4
megabytes
of RAM about 3 years ago. I am asking $150 for the system.

Here is what you get if you buy my system:

Mega ST2 (w/4MB RAM) TOS 1.2
SM 124 Monochrome Monitor (No problems at all!)
Golden Image Hand Held Scanner W/Touch-Up software
50 MB Hard Drive (Seagate ST157N)

You'll need to buy a new cable that goes from the host adapter to the
hard drive. I get occasional lock-ups which I've traced to the cable.
Oh, the Hard drive is in an ugly but functional external case. Remember
the
"Juggernaut drives that Dave Bass was selling when he owned Computer
Rock on
38th and Balboa? (S.F.)

I will include the following software:

Productivity:
Calamus SL (Desktop Publishing)
Outline Art (Vector graphics drawing program)
First Word Plus v3.14 (Word Processor)
STraight Fax v2.2x (Send/receive faxes)
Phasar 3 (Home accounting)
Silhouette (Auto tracing and Vector graphics editor)

Other Software:
NeoDesk 3 (Desktop replacement)
Diamond Edge (Hard Disk maintenance utility)
Diamond Back II (Hard Disk Backup)

Plus some other programs I can't recall at the moment. Let me know if
you are interested.

I live in San Francisco so if you live in the S.F. Bay Area I'm sure
delivery of the system
should not be a problem. I hope we can work out something.

Thanks,
Sam Ramirez
(sramirez@best.com)

PS, If any of you still belong to GEnie would you do me a favor and post

this message on one of GEnie's round tables? I really need the cash so
if
you can't buy the system maybe you can still help me out. I sure do miss

the good old days on GEnie!

Dunno...

g> I've no idea. I just bought v5.11 from Systems Solutions in the UK.
g> But as the MagiC team never tell us what the changes are, who can say
g> if you're missing something or not :(

Collective knowledge from Henrik Lynggaard and System Solutions indicates the
following changes between v5.03 and 5.10/5.11 - some comments only seem to
apply to the German version (manual update and CPX?)

==========
* better OLGA support (called OLE on WIN 95)

* MGNotice notepad program for desktop notes (run from START folder)

* The German update comes with a small 4 page leaflet and a read.me file
describing the changes.

* There is a new CPX that is used to configure the #_FLG line in the
MAGX.INF.

This is where you switch the different aspect of appearance:

* 3D-look
* logo
* real time actions
* backdrop button

* double clicking on a window's move bar (shading) shrinks the window so
you only see the move bar. This feature does NOT need to be supported
by the applicaions. Doesn't work with iconified windows.

* the windows now scroll, resize and move in realtime. I find it
suprisingly fast (McFly or better). But this varies - some sizes it
depends on how fast a program can update its window.

* the real time actions can natually be turned off individually in the new
CPX. The setting in the CPX is the default setting, but pressing
the control button reverses the actions. This is useful if, you have
realtime effects turned on, but there is one program that is
particularly slow in its window updates

* clicking on the desktop background now makes the desktop the active
application

* Double click on extension field in the fileselector and an editable field
appears allowing you to enter your custom extension.

* you can also define your own set of extensions in the magx.inf file.

example

#_FSL 0 *.JPG,*.JPEG;*.PRG,*.APP

this defines two extensions, one called "*.JPG,*.JPEG" and the other
called "*.APP,*.PRG", the correct extension can be selected by clicking
on the extension field and selecting the right one from the popup.

if you enter an extension in the edit field that is allready defined in
the magx.inf file then the correct extension set is chosen

* Magxdesk has been altered to suit kobold 3.5, by quoting filenames with
spaces

* Magxdesk caches the icons, and you can put up to 30 RSC files in the
\GEMSYS\RSC folder. But no matter how many you've got in that folder
only the icons actually used are kept memory.

* instead of draging the icon in the APPLICAT (install icon) program you
can now double click on them. Especially practical for people with a
small screen res.

I have heard that they have finished a new CDROM.XFS which allows for
background DMA access to CDROM drives. It has all the advanced
features of the German CD TOOLS (ie. audio extraction) and can read MAC
format CD's as well. More on this when it becomes available.

Hi,
I'm wondering if it is acceptable to put a SCSI host at both
of ends of a SCSI chain. I.E. Make sure the two hosts are set to
different SCSI ID's and put my Falcon on one end of the chain, and
my Pentium box at the other? I've heard of a lot of people using
Samplers and such that support SCSI on the other end of their Falcon or
PC SCSI chain...so in theory, couldn't I do this with two computers as
well?
I have HD Driver..version 6.something, and I notice an option
for SCSI arbitration. Is this something intended for using multiple
hosts on one SCSI chain? If not, how about a description of what it
does do, please.
Finally, what is the latest version of HD Driver, and what
advantages would it have over version 6?

Thanks,
Brian

>2.11 but at that point that's where all communication between the authors and
>myself have ended . All my e-mails have gone unanswered. So Phil if you are
>not impersonnating Elvis could you respond to the registered clients of Oasis ?

The Oasis authors normally never answer to any inquiry even when you
are asking to receive your registration key (and above all when you
have already paid ... it was my case !) ....
A few months ago I was sending about ten mails to both Oasis authors
and they never answered ....

Until an incident happend on the server : I had injuried (not a good
point for me I agree) a person I thought he was one of the Oasis authors
(I was wrong again !)
.. a few days later, at last they answered to me with a very short
mail and gave me my registration key ... without any remarks about
their unability to answer more early !!!

Here in Belgium we are always waiting for a PPP connection usable with
Oasis 2 ... with the 1.35 it was possible, then why have they deleted
this possibility from their nice 2.1 version ?

Nothing to understand !

And ... above all ...

NO SUPPORT FROM OASIS CREATORS

I hope you will have more succes than me, but even with english
people, I see they don't answer :-)

Hello. I need some input from as many of you people as possible.
I am working on a research paper for an Information Systems
Concepts class. This paper makes up half of my grade for the
quarter.
The topic I have chosen to research is Untapped Markets in the
Programming Industry, with an emphasis on retro-gaming and classic
computing. What I need from you readers are your thoughts and
suggestions on the following questions:

For classic video game systems such as the Atari 2600/5200/7800,
Intellivision, Colecovicion/Adam, and any others...

1: What types of games would you like to see produced for these
systems?

2: Do you feel there is a niche for a hand-held video game unit
that would play collections of the classics compiled onto small
cartridges?

3: How much would you be willing to pay for new cartridges for
classic systems or for the above hypothetical hand-held system
and its respective cartridges?

For classic computers such as the VIC-20, C=64/128, Atari (8-bit/ST),
Apple II series, etc...

1: What kinds of new games would you like to see developed?

2: What would you like to see in terms of new applications, system
software, internet/telecommunications tools, programming tools,
or any other items you can think of?

3: What price range would you consider to be reasonable for quality
games, tools, and applications?

4: What form of distribution/registration would you feel to be the
most effective for new packages?

a: Full Commercial (pay before play)
b: Traditional Shareware (try first, then send in your registration)
c: Commissionware (my own term... like shareware, only after you
pay the registration, you get a copy of the
program with your own unique registration number.
Then, any copies you distribute that have your
number on them will earn you a commission if the
person you gave the copu to registers)

5: What new hardware would you like to see produced for the various classic systems?

Finally, for statistical purposes, I would like to know what systems, both classic video game and classic computer systems, you use on a regular basis and which ones you would like to see supported.

Thank-you very much in advance for your participation and for your time...

CvO

Its NO accident....you can see from the header that someone has gone
to great leanghts to hide who they are.. I would be very suprised if
worldnet.com are the real ISP..
A few of these arrived a couple of days ago..exact same spam.. but
with different headers.(Someone testing?), it aint no accident.. we
have been attacked like this before.. we just have to make our kill
files and wait until it goes away... as it always does :(

From: bssenior@bradford.ac.uk
Message-ID: <5qdl39$cjp@squire.cen.brad.ac.uk>
Source record: 119756

I have noticed after various tests that certain JPEGs when saved onto my Hard Drive:
i) Cause write fail errors when initialy saving, this is overcome by not verifiying!!
ii) When it comes to viewing them in software such as GemView they load fine and start being proccessed but at varying points I get 'un-expected EOF in JPEG file' errors.

It seems the JPEG saves itself onto the disk so far and then the write fail occurs, the un-expected EOF being at this point?

Question is after extensive testing I am 99.9% sure there is nothing wrong with the drive (No other file has ever had this problem) it just seems to be certain JPEG files, others are fine, anyone know why or experienced similar??

Ben.

>I guess you're right ... it's just hard to imagine who could have a grudge
>against talk.politics.guns, news.admin.net-abuse.usenet, soc.penpals,

Hmmm theres two possibles...

1) Like the morons who make virus.. they do it presumably to show they
can..or something?

option 2 is as you say

>comp.lang.perl, and nothing else. Or is the object maybe to get as much
>hate mail as possible sent to

The people in the header that its supposedly from.. one is definatly
from atari.. the rest are presumably from the other groups.. maybe its
a "mess with me and this is what you get" sorta thing..

Anyone with sense enough to actualy read a header.. should also have
sense enough to know that all those people could not collectivly send
this load of spam..

Looks like we just have to put up with it.. it will go away.. and the
person sending it probably wont be reading any of these.. if he is
then he may want to attack me and you next... if he does then I would
just like to say...he is a fecking arsehole.... hmm presuming its an
he?

I am just glad this all aint real life hehehe

This has always been the case with OASIS authors.. I tried to contact
them way way back when version one was out.. nothing :(... and how
much is there software :(

I make games and ask only for feedback.. people who write to us by
snail mail.. get a good response with 2 or 3 disks returned for there
letter.. thats how glad we are to hear from users..
And anyone who emails me always gets a response.. and hopefully what
they think is a decent and helpfull one..
And I charge NOTHING for software and have been making ATARI software
for many years and still am.. Theres lots of ATARI programmers... some
do it as a hobby and even a labour of love:).. Some do it to make as
much money as they can out of fellow ATARIans...and some do it as a
stepping stone to other platforms...I just pray that if I ever get as
low as the last two..then somebody shoot me..

AND I AM ENGLISH <SMILE> so you see..some of us do answer :)

>I am using HD Driver 6.

Yep, that sounds nice.

>What else do I need to connect a SCSI ZIPDRIVE, in the way of Hardware, Cables
>& Software and where may I get them from in the UK?

I don't now about your gasteiner drive. (I never seen one device)
But you MUST have an DMA to SCSI Hostadaptor how was support parity.
(I don't now in with way a gasteiner drive is connected to a DMA-Port)

If you have a Hostaptor. Connect it to your 1040.
The open end, a 50 way connector is your scsi-bus.
Use a 50 to 25 pin cable to connect your zip.

1040 DMA DMA/SCSI-Hostadaptor SCSI-ZIP Other SCSI Devices in Line..
##########-<>-########################------#########-----##### (But the last Drive must be terminated!!)
(Ask you Device Manual!)

(I don't now witch connectors your gasteiner have)

That Device is connected direct to 1040 DMA ?? (So it will have in internal Hostadaptor)
Ask you gasteiner manual witch kind of drive do you have, if you found a scsi-device in your gasteiner-box, it's easy. If not, you have a lot of work.. (And solder..)

Note:
SCSI-ZIP needs ALLWAYS a SCSI-Host how was generate a PARITY-Signal.
No Parity, no ZIP !
(Sure, it's hard, but so it is..)

Regards, Robert

Yep, The author of the program just said the same. Uhg! I tke NVDI is
not public domain either?

554. Mouse driver with NOVA video Card

Newsgroup: comp.sys.atari.st
Date: 1997-07-14 00:00:00 UTC
From: senyshyn@helix.nih.gov
Message-ID: <AFF0409E966813B312@128.231.207.7>
Source record: 119779

I have been using a video card (NOVA 16M VME) in my Mega STE
for about a year now. I believe it uses a NOVA driver software version
2.61.

My problem is the mouse behavior on my 17" SVGA screen.
The mouse moves in increments of about 5 pixels as if it was still
mapped to the smaller SM124 screen dimensions. The movement in horizonatal
and vertical directions is tolerable BUT in the diagonal the mouse
moves in STAIRCASE fashion.

This makes drawing programs good for only drawing staircases!
Also trying to hit and click on program buttons can be troublesome.

Can anybody suggest a mouse driver that will match my NOVA driver for
~~~~~~~~~~~~
smooth mouse operation?

Regards
Jan

It's funny you would ask if it's dead as I e-mailed Phil asking if he died or
what and he didn't reply so maybe maybe not. Seriously I know it's at version
2.11 but at that point that's where all communication between the authors and
myself have ended . All my e-mails have gone unanswered. So Phil if you are
not impersonnating Elvis could you respond to the registered clients of Oasis ?

I know that the SCSI internal HD interface for the MSTe is slightly unusual,
so I wouldn't automatically expect that the IDE interface produced by TUS
would work unless someone here specifically knows that it does. I would
assume that an IDE interface doesn't currently exist.

a> - I need some VME graphic card for Mega Ste to conect a SVGA monitor
a> Who sell it ? ..new or used

Nick Harlow at 16-32@premier.co.uk or
System Solutions on info-hardware@system-solutions.co.uk

I have a SCSI-3 drive hooked up. (SCSI-3 is an extension of the SCSI-2 protocal)
You do not want a Wide drive. I have a Microp 4.5 gig AV. I have to use
ICD Pro 6.5.5 to partition it. In general it was a pain but then my old
Microp was a pain to set up. Works fine now.

I would recommend an active terminator (they come with lights indicating the
functions that are occurring). You should not need a pass through terminator
and the Falcons mother board is terminated already. AFA "Active Termination"
you got me??

HDDriver is up to 6.22 or 6.3, you should upgrade.

Also Dirt Cheap Drives usually has the best prices and check out the Toshiba
2.5" 1.08gig IDE drive only $230.00 and it works with the Falcon.

Perhaps someone else can answer your other questions.

Regards,

Rich

d> I have a 1040STFM with 4meg Ram, TOS v1.02, Gasteiner Hard Disk etc.
d> What economical improvements can I make in terms of performance be it
d> Hardware or Software and where may I obtain them??

Spoilt for choice... <g>

Both TUS and System Solutions are doing relatively cheap serial port upgrades (or you could grab an old ST mag and go for a DIY improvement). Then you can make use of a faster modem.

I'd certainly advise a TOS upgrade, whether it be TOS chips or with Magic, to get a vastly improved performance from your HD. You may find that Magic claims too much memory from your 4Mb - that's the main disadvantage with going that route.

Further improvements would start costing a little more...

I don't have a ZIP drive, but AFAICS all you need is a SCSI cable from the
Gasteiner drive to the ZIP, plus a bit of playing around with HDDriver.

Well, my Mac (PMac 7200/90) is running STonX. Although it runs on top of
LinuxPPC and X and not on MacOS ;-)

Yes. Why don't you do a quick web search for 'atari' and 'emulator'. That would be a good start.

You can check out Pacifist which is one of the best emulators around.

These links are in the Quick FAQ :

Very few games work on a mono monitor. You need a colour monitor, or a TV set, for most games. Does the rest of the game run on the mono monitor ?

Yes, you can use a standard PC 1.44M drive.

There are instructions on how to do it at:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

>Can anyone help me with the entries in the ROUTE.TAB file.
>I can't connect to internet provider because I don't know how to edit this
>file.

Mmm ... I'm not sure how important this is although the docs. seem to
say that you MUST have it. If you have the template provided with
STinG you just have to manually edit the port name. Here is what I am
using at the moment for the Modem 2 port of a TT.

```
#
# This is the routing table, to be used by the router to route IP datagrams
#
# Format of routes comprises four entries, separated by TABs :
# - First the network (subnet number) which can be reached by using this
# route.
# - Next the subnet mask associated with that network.
# - Then the port name follows. This is the name as listed by ConfSTinG or
# STNGPORT.CPX.
# - Last entry is the IP address of a host on the attached network that
# can act as a gateway.
#
# The network specified can be directly attached to the specified port, in
# that case no gateway is needed, as the datagram can be routed directly.
# For a route to a network that is directly attached therefore the gateway
# entry should be set to 0.0.0.0.
#
# For an attached Ethernet the gateway entry specifies the gateway out of
# the Ethernet, for a serial line it is simply the host at the other end.
#
# It is advisable to finish the table by a default route. This route is most
# easily obtained by specifying a network 0.0.0.0 with a netmask 0.0.0.0.
#
# Routes with invalid addresses or absent ports are ignored.
#
# 192.68.0.0 255.255.255.240 Modem 1 192.68.0.1
# 130.75.75.0 255.255.255.128 Serial 2 0.0.0.0
# 0.0.0.0 0.0.0.0 Serial 2 130.75.75.16
#
0.0.0.0 0.0.0.0 Modem 2 0.0.0.0
```

So, in normal circumstances (if you are not networking) the table
contains the "default route" only (as a table terminator).

Note that, in the version of STinG that I have Serial 2 is NOT the
correct name. You have to use Ser.2/LAN.

This is what really gets me annoyed! I've just paid a fiver for this
upgrade so why the hell do I only get half an upgrade. Where is my
English 4 page leaflet and read.me file??? And where is my CPX?

I can understand this kind of lack of documentation with shareware etc.
but MagiC is supposed to be a professional, commercial piece of
software. Surely if they release an English version they ought to take
the time to translate the docs?

579. Trying to setup Mintnet (ST<->PC)

Newsgroup: comp.sys.atari.st
Date: 1997-07-15 00:00:00 UTC
From: sig@end.article
Message-ID: <sig-1507971050540001@47.85.0.99>
Source record: 119703

Hi

I am having lots of fun trying to set up MiNTnet.

I am trying to get a ST<->PC connection.

I already had KGMD installed, so I got the MiNTnet 1.01 file & ran the installation. Machine is a 4 MByte STFM, MiNTnet is on a 512 Mbyte Minix partition.

The installation script seemed to run o.k.

On bootup, all appears well until 'slattach' runs, when everything stops. It looks like 'slattach' is waiting for a connection.

I have to ^C to get 'logon'.

I can 'ping' the 'loopback' or 'localhost' addresses successfully, but I get 'host unreachable' errors when I ping the STFM's address or the address of the PC.

On the PC side, I can successfully 'ping' it's own address.

I have a working Ghostlink setup (19200 baud), so the cabling is o.k.

I have read a lot of faq files, but I cannot work out where I went wrong, all of the required files/links seem to be in place.

This is the entry from rc.net:-

```
slattach -l 100.0.0.0 -r 100.0.0.1 -p ppp -s 19200 -t /dev/ttya
```

I have tried running the rc.net entries manually, with the same result.

Can anybody suggest a course of action?

Source record: 119705

: : I have a 1040STFM with 4meg Ram, TOS v1.02, Gasteiner Hard Disk etc.
: :
: : What economical improvements can I make in terms of performance be it
: : Hardware or Software and where may I obtain them??
: :
: : Any constructive advice would be appreciated
:
: First step would be to get NVDI, I think. Step 2 would probably be an
: alternative OS like Geneva or Magic.
:

Amen!

Another inexpensive software addition I highly suggest if you use any kind of dot matrix printer with a resolution of more than 120 dpi. "Outburst ST" replaces the TOS routines for printing BIG TIME, I dare say it provided at least %200 speed increase in printing with my 300 DPI laser printer! Of course, if you get Majic, this upgrade is usless as Majic itself is a total TOS rewrite. If you go with Geneva, Multi-TOS, or stay with single TOS, this upgrade is a must have if you do any serious printing.

HD-Driver is also a good performance enhancement in terms of software. This is top notch "FAST" hard disk drivers with all kinds of features I wonder how I ever did without! If you run Majic and HD Driver together, you get the added benifit of backgroud DMA file transfers so most, if not all of your CPU time is avilable to keep right on computing in your favorite applications!

Also, the 16mhz boards are well worth the cost in most cases, as you should be able to aquire one for less than $200 new, and perhaps much less if you luck up on finding a used one.
You might even be able to find a 28mhz or 32mhz 68000 board. I know there were a few being sold a recently as a year ago, but they were NOT cheap.

Along with the SCSI drive, you'll need an interface to connect it to the
AHDI on the back of the Atari. Unless, of course, there is already one
with it. You'll need some hard drive boot software too.

>to Cnam mirror looking for the new stuff :-(

Pretty observant, there.

I can't say anything about why nothing new is showing up. I know people have had trouble getting access to the ftp servers in the past. By and large, I'd guess this is the major reason that no one even tries to connect to it now.

Also, I used to be a lot more active myself, going out and grabbing new Minix, GNU, and MiNT stuff. These days I've been busy enough with my day job hacking that I don't spend much time on Atari programming any more. (Does anyone even use Atari Minix any more?)

I'll note that this CAB/MiNTnet overlay has been keeping me pretty entertained though, and I may be putting up more MiNT-ish stuff in the near future.

Hey!

We don't need STIK anymore I hope. The subject says what has happend.
PPP-Connect is a short, easy to install internet routine with PPP and
alternatively SLIP. It runs with the new CAB Version CAB 2.5.

I will test the new software and tell you more.

Have a look at: Http://members.aol.com/ashinfo for more informations.+

YES! Newsie has always worked for newsgroups since 0.64. I'm using 0.78
now and everything works. The FTP works better than aFTP and MG-FTP.
I can download, decode and view JPEGs (jpeg.acc) or GIFs (wax-gif.acc)
while I'm online.

> Could it be the 68030 processor of my PAK?

Dunno, works on my Falcon 4.04

> How do I install NEWSie correctly?

What I did was go to the last menu (options?) and filled out each item,
then save. From top to bottom. You do have to give the correct info! :-)

I also created a /WORK folder and configged it in the options\paths menu.
You can copy the obvious /NEWSIE78/ files to the /WORK folder and see what
works. Also Newsie works differently when you download one message at a
time, the other method being to "read for offline" or some such. That
seems to be the more obvious use of the program. I use the one at a time
approach.

604. CAB Crashes w/ this URL

Newsgroup: comp.sys.atari.st
Date: 1997-07-15 00:00:00 UTC
From: szhays@bullwinkle.ucdavis.edu
Message-ID: <5qgse3ber1@mark.ucdavis.edu>
Source record: 119728

CAB 1.5 used to crash regularly with a number of URL's, and CAB 2.0 has reduced the number of crashes, but I still crash at certain pages. Case in point: http://www.hotmail.com

I thought it might be useful to try to gather, as we once did with CAB's 1.x, a list of sites that are consistently problematic, to see if we can isolate the problem (by the way, I also, apparently, am very good at crashing other browsers, including Netscape Navigator and Communicator).

Another site I heard was a problem, and have been able to verify as being troublesome, is http://www.altavista.digital.com. When you try to go to the second page of your search, CAB redisplays the first page of search results. I'd heard this was because CAB has a limit on the number of characters in length a URL could be, but have no way to prove this.

URL length is certainly not the problem with www.hotmail.com. Also, viewing the source of that page from another browser, I see nothing too unusual. There is a little tiny bit of java script to make text appear on the status bar, but that is certainly common enough these days. Plus, this page causes CAB to actually crash. I'm back to the desktop. I'm running CAB, STiK 1.12 and OVL 1.25 under Geneva rel. 4 on a Falcon.

Anybody else having consistent problems?

Of course you'd hae to have a MIDI sound source connected to your machine at
the same time - no samples are contained within a MID file.

Sorry if I'm stating the obvious...

Robert Wills (cj439@FreeNet.Carleton.CA) wrote:

: But if you've gotten this far, you know that. Does anyone know what we can
: do to eliminate, with extreme prejudice, this virulent vermin?

I know. The main problem is finding out exactly *WHO* on what provider.
The person can easily be so good, that he can easily cover his tracks,
thus making himself untraceable.

So, that means, before you even blast that guy, find out if it's really
coming from that account. It can easily be coming from someone who knows
how the Internet and Usenet work, and damned intimately.

Some time ago, I was the victim of a forging, via newsgroup removal
messages. It didn't take long before we found they were coming from, not
surprisingly, Detroit, Michigan. As it turns out, it was being injected
via one of Michigan's, especially in Detroit at the time, many BBS-related
connections. The common thread at the end of the Path: line was an army
base out in that area. I tried going out there at the same time I was
seeing some friends who lived in Detroit. They've since closed the
security hole. It died as quickly as it started.

Of course, I did get a bit of mail on this, but not much, luckily, since
it was a number of the warez groups. I could have been mailbombed and
carpetbombed to hell and back, but I wasn't. I still have all the captures
and mail from that time.

But of course, this isn't all. I'd much rather this thread end here, and
taken to email or another newsgroup, preferably checking on the
news.admin.net-abuse.usenet newsgroup. That has more info.

Now... Back to our regular chatting about the Atari ST systems.

Ah... Reminds me... Anyone heading out to the MIST AtariFest in
Indianapolis, Indiana on the 26th of this month? Shall I repost that
message that was posted awhile ago?

Ummmm. You don't need really THAT much RAM for using an ST with
the Web. - Even 512kb may be enough. - All the User needs, is the chance
to mail and to get and receive Binaries, right.- Ooops, I forgot - WWW -
right ? OK. WWW ist a different story. - I must admit I currently don't even know,
wether there is a Web-Browser for the ST around.
Everything else can be easily done with an interactive account at your local
ISP. Mail from there and download file from there with SZ/RZ (zmodem).
To get your files, you have to ftp them first locally to your provider.
And don't forget to delete them after you have downloaded them to your
home! ;)

: If so he is definitely in business. Most of the s/w he needs is PD and
: can be picked up from many sites.

YES! :-)

>Ummmm. You don't need really THAT much RAM for using an ST with
>the Web. - Even 512kb may be enough. - All the User needs, is the chance

Correct.. needing 2meg and a HD is what the ATARI Magazines used to
tell everyone.. and that sort of talk is what put most ATARIans OFF
joining the internet because the mojority had one meg floppy setups,
It may be the preffered setup.. but is by no means the minimum and
this should always be pointed out lest we put our fellow ATARIans off
joining us?

>to mail and to get and receive Binaries, right.- Ooops, I forgot - WWW -
>right ? OK. WWW ist a different story. - I must admit I currently don't even know,
>wether there is a Web-Browser for the ST around.

There is...It is called CAB an I have personally surfed the net using
CAB on a one meg Floopy disk STFM.. but that was about 2 yrs ago :)

>Everything else can be easily done with an interactive account at your local
>ISP. Mail from there and download file from there with SZ/RZ (zmodem).

Do you mean a SHELL account... yes my isp offers a shell account and
using only connect (a comms package) i was able to email, usenet,
browse the web, ftp, telnet... everything and my only software was
CoNnect..or Freeze Dried terminal or teddyterm.. ect..

But theres dedicated news and email prgs now for the atari (there
wasnt at that time) and all will work on a one meg with a floppy
system..........I admit a HD and more memory would be better, thats
obvious.. but anyone starting out and wanting to know if its possible
then the answer should always be YES.. I don't say its easy.. but you
can do all the above mentioned tasks on a One meg ATARI FM without a
Hard Drive..

Some you could do on a half meg I suspect :)

>: If so he is definitely in business. Most of the s/w he needs is PD and
>: can be picked up from many sites.

This bit is true :)

>===...To answer his question.... NO the Zubair 2.5 meg board does NOT go
>to 4 Meg on the 520ST. We have sold these boards in the past and they were
>engineered pretty good, but did limit you to 2.5 meg.

>Rod MacDonald

Actually there were two different boards produced, the 2.5 meg board
for the external drive 520ST and the 2.5 / 4 meg board for the 1040 of
520 STFM.

The 4 meg board has ram chip sockets on the top and bottom of it is
the easiest way to tell the difference. The reason for the 2.5 meg
bord is because they couldn't fit the extra ram chips in the older
style case.

I have the 4 meg version in my 520STFM, been running it for a long
time now, no problems since I hard wired the connections from the MMU
chip board to the motherboard!! Dang board that fit over the MMU kept
losing connection....

From the title header I would bet he has the 4 meg version because
they called it the 3D/4 Meg upgrade. I have the original documentation
around here somewhere....

Hehe, MIDI came into this house years before my first ST ;-)

Btw, I have found a little TTP that does it, but it can only
play single line melodies. What I really need is something
that supports the full 24 notes/16 channels GM specs.

Thanks to all of you who responded to my previous queryregarding zipdrives
and the 1040STFM.

Well,

HDDRIVER v6 recognizes the ZIPDRIVE

I can Password Protect a ZIP Disk

When I try and format a ZIP Disk it seems to be formatted then a sector check
is run. At this point the check takes forever and if I "ESC" the sector check
the ZIPDRIVE is no longer recognized

HEL.............P!

That sounds too much..

I never tested two devices with a source of 1.4 Amps.
Don't place another device on the top of the first device.
(Watch out for cool air condition)!

I think 700mA it's enough for a smal flat cable.

Java shouldnt be a problem...But there is an overly long meta name at
the top.. and if you look at the GFX filenames they are very long,
maybe 16 charactors in some cases....Could either of those..the latter
would be my guess? be causing the problem,

>this page causes CAB to actually crash. I'm back to the desktop. I'm
>running CAB, STiK 1.12 and OVL 1.25 under Geneva rel. 4 on a Falcon.

>Anybody else having consistent problems?

No but I had an idea?... If you ahve the source and gfx from another
browser, why not stick it all on your HD and try loading from there,
look at the source and change a few things.. this wont help you get on
the actual site.. but it will nail the problem for you.. rename all
the GFX to shorter filenames ect..
Do the changes one at a time... until CAB dont crash.. then look at
the other pages that cause a problem and make the exact same change..

Just an idea :)

Some childish person, going under the name of "old.salt" is bunging loads of garbage into a number of newsgroups - not only atari.st. As well as swelling BT's profits this can cause probs. with newsreaders as the garbage he sends is non-standard.

I use Newsie and have found a way to clean-up fairly swiftly (just delete the numbered files from the group directory and edit the XOVER file for the group to remove all references to them).

But ... other newsreaders may get confused in different ways and therefore the treatment will not be the same.

Interesting news...However, though my German skills are nigh on non-existent, my reading of the ASH page suggests that PPP-Connect works only with MagiC. So those of us not using MagiC
shouldn't start celebrating just yet.

I'm not complaining too much since STiK works pretty well for me.

Funny thing is the author Wolfgang Wander rigth now seems to live in
the US. (wwc@wizard.mit.edu). I just found out because I requested a
new key and his mail was redirected. Unfortunately Connect95 does not
have an English version (yet) but 2.46 is superb and certainly worth
while.

Yes, that's right, but here in germany you can't found any provider
with SLIP in the nearest surrounding. Therefore you have to pay very
high telephone bills.

>> The subject says what has happend.
>
>Happend ? That program has been under development for a long time now.

I have telephone bills every month about 100$. The only reason why it
is so high is, that STIK doesn,t support PPP. With ppp-connect the
telephone bills will get under 30$ every month. therefoe it is no
problem for me to buy PPP-Connect, MAGIC and CAB 2.5. After two
month it will work rentable for me.

>>I will test the new software and tell you more.
>
>Where did you find a Demo ?

No demo, I will test the full version, of course.

Message-ID: <5qjr45$782@cantine.wu-wien.ac.at>
Source record: 119663

Hi!

Just wanted to say that ASH has announced availability of a PPP software
to connect to Internet providers called PPP-Connect wo. having to use MinT
(don't know whether Magic is required).
Together with it, a new CAB version (version 2.5) was released conatianing
some exciting extra modules to download html pages together with all
graphics etc, encryption hide tools (that let's you hide data in other
data etc.). Another new programm released is a new deskto called JINEE
that will run under Magic and has some exciting features.
Updates for Artworx (to version 1.4) and Signum are also available.

Alfred

p.s.:
In a local support newsgroup the question "when will we see news and mail
software?" was ansowered by an ASH official with "hopefully soon".

p.p.s.: I am not affiliated in any kind with ASH. Just wanted to inform
you about the software news, as it seems that mayn German Atari "mausnet"
want a secluded life with no or litle contact to users in the usenet :-(

>>HDD on top of it, the current required will be 1400mA Does anyone know what is
>>the current output of those IDE cable?
>
>That sounds too much..

Correct, 1 amps is alot of power, I think there is something I missed out.
The 330M HDD did state that it's rating is 700mA.

>I think 700mA it's enough for a smal flat cable.
>

The 330M HDD is drawing that much current. I have it on almost every night for
about 1-2 hours. The F030 still functioning as per normal. Further more I am
in a hot climate country (Singapore) and so the heat inside there gets worse.

Regards
William

Hi Surfers,

Well, if you want to connect to HotMail use CAB v1.5/CAB.OVL v1.18. No problems. Why would you want to connect to'em anyway? They are a big source of Spam. BTW, I have a friend who is a Bounty Hunter who can offer these UseNet Spammers an offer they can't refuse. If anyone has any info who they are please let me know. Gratis...

I'm looking for a way to set up a killfile for NEWSie that can jump around all the BS messages. If anyone knows how, please post.

C'est la Vie,

a.k.a. The Lone Ranger

650. FS: MagicMac $125 (run Atari software on a Mac)

Newsgroup: comp.sys.atari.st

Bonjour,

Dans l'article <33CE0913.4B9B@erdw.ethz.ch>,
Davide Bionda , <bionda@erdw.ethz.ch> a crit :
Hi everybody!
I recently aquired an Atari 1040STF (great computer!). I would like to
know what are the diffrences between this model (1040STF) and 1040ST
as well as 1040STE.

1040 ST : external drive I think (I'm not sure)
1040 STE : memry can be extended by SIMMs; 4096 colors instead of 512;
Hardware scrolling; support for joypads.

I am also looking for software for it, so if you know some net
addresses where I can find freeware/software for it as well as the
utilities to decompress them (especially .zoo, .lzh and .zip archives)
I would be very happy if you let me know.

Try ftp.ibp.fr/pub/Atari (or atari).

I tried some programs I found, but the most ones didn't work (Why?).

May be a problem of monitor (monochrom instead of color, or
vice-versa), or software for a more recent kind of atari - what software did
you try?

I
also saw many times stuff for Spectre. Is Spectre a Macintosh
emulator? Where can I find it?

Yes. On occasion market only, I'm afraid...

Thanks very much
Davide

On 15 Jul 1997 00:42:47, Titus Roth wrote:
>What exactly is clockpatch and where can you get it?
>.

For the Falcon, "clockpatch" refers to a hardware mod performed to clean up the system clock. There is a file floating around called "falconbug" on most ftp sites with an img file showing how to do the modification. If your having problems with SCSI performance/data loss, you might need to perform this mod. Most Falcons have some version of this mod installed. I think there are three types documented, and now with the Nemesis kit, four. The latter working the best for me.

Mike

Hi.

> I am new to the St scene and am considering the future purchase of an
> sh204 hard disk. Do I need any additional software to use a hard disk or
> do I need only the drive ??

I think you need a harddisk-driver. You can use Atari's own driver, but it
really stinks. I suggest you download a demoversion of Uwe Seimets
"HDDriver". The demoversion is a bit slow, but the real version is great.

> Thanks from a novice !!!

You're welcome, mate!

Some authors do cares ...

I wrote a module to load&save JPEG one year ago ! It works with all M&E software
(D2M, Dform, Piccolo, Diapo, BV4, ...). And using, by example, Diapo you can batch
convert all supported loaded formats (more than 100 differents) to all
writting supported formats (about 50).

You can get info on M&E software on PARX's website http://www.parx.fr/
and for extra modules you can see my page software on
http://www.ecoledoc.ibp.fr/~da_cunha/

Progressive jpeg file are often some bytes smaller than straight ones,
they do require more memory & horse power to load&save but I daily use them
as all my graphic tools handle them smoothly ;-)

Eric.

I've just added several BoxFulls of ST HardWare, Next I'm adding more SoftWare for the Atari 8 Bit. Check out my Catalogs for HardWare and Books as I have added more Items to the Catalogs.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a

special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

> well?

You can, provided both machine's SCSI adaptors are capable of SCSI
arbitration. Many Atari adaptors aren't, but I'm not sure about the
Falcon's. However, the Falcon's termpower line is somewhat weirdly
connected, so that the SCSI bus might not work with the Falcon switched
off.

> I have HD Driver..version 6.something, and I notice an option
> for SCSI arbitration. Is this something intended for using multiple
> hosts on one SCSI chain? If not, how about a description of what it
> does do, please.

It's not intended for that, but can be used for it. It's intended for having
SCSI devices automagically exchange data, without having the host involved.

> Finally, what is the latest version of HD Driver, and what
> advantages would it have over version 6?

Uwe Seimet told recently V7.0 is imminent. I can't tell about the advan-
tages though.

> wether there is a Web-Browser for the ST around.

And this precisely establishes the difference ! True, a 512k system should be enough
for mail and ftp, but running CAB (the web browser) requires a MB by itself, so
2 MB is the minimum to go for. And WWW is normally what is meant if someone asks
how to go Internet.

> Everything else can be easily done with an interactive account at your local

Well the guy asked for getting on the Net, not doing things with a terminal account.
There is a difference.

If the machine had 6 ROM chips before, then you must solder a few jumpers
to tell the machine about the new configuration. Look out for soldering
pads on the board that say 256K/1M. 256k are the size of the 6 ROM chips,
the 1M is the larger size, of which only 2 are needed.

This is rarely a matter of settings, if you get data traffic done at all. If
you *can* surf the web with CAB, or sometimes manage to work with Newsie, than
problems with the TCP implementation is more likely. In fact my current version
still has a few problems with Newsie, which I think will be solved soon, but
CAB works without problems for quite some time already. Are you sure you got
the latest STinG version installed ? If your CAB.OVL is not V1.25 (Look under
CAB's 'About ...' menu entry) I'd strongly suggest to try this too.

The MiNT applications used to establish the connection use .conf
files, which show up as .con when using the 8 character file name
convention.

>I beleive some versions of CAB 2 had a bug which prevented them from
>working properly with the CAB-for-MiNTNet v1.81 overlay. This might be the

>
I've heard of this bug, but I've also heard that the newer versions
of the demo no longer have the problem. However, it still crashes for
me.

>It would help if you would include a more detailed explanation of the
>problem. Also, it is important to know whether the problem really is with
>CAB 2 and the overlay, or does your network connection not work at all?
>(For example, can you use other network software without problems?)
>
Yes, my MiNT/Net set up has been working for about a year now with
little problems. All other applications and utilities function very
well whether it is MiNT or STiK(w Gluestik of course). It crashes,
before it even gets as far as to display the GEM window with the
message, 'Stack Frame Error' . CAB 2 works fine, however, with
previous versions of the overlay.

Curiously though, CAB for MiNTnet 1.81 works fine with CAB 1.5 for me.

> CD a different drive. (due to severe Lack of drive letters)

Not possible paul, Each cdrom is infact a seperate device with it's own scsi
id. There is no way to combine these into one drive letter scsi does not let
you do this. The same way that you can't partition two hard
drives and have the space all on the 'c' drive.

672. Atari ST Hardware/Software for Sale (Ohio/N.Kentucky/Indiana/PA area)

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: rja <rja@www.serve.com>
Message-ID: <EDJ5M1.9Mt@intruder.daytonoh.ncr.com>
Source record: 119542

I have a bunch of ST hardware and software (primarily older software)
that's basically just taking up some space right now. If anyone within
a reasonable distance from Dayton Ohio is interested in buying any or
all of it, send me an email at rja@www.serve.com ...

I don't have an exact list right now, but some of the stuff for sale:

-MegaSTe/4
-1040STf/2.5
-Spectre GCR (w/roms)
-Mouse Master
-some old hard drives
-bunch of software (primarily some old games, and misc
utilities/applications)

(sorry, no monitor though)

rob

(I may be selling the ST's, but still have my trusty ol' 800xl forever :-)

673. Imagecopy v4.1 upgrade released

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <3820_hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 119585

Hi All,

I didn't see any announcement posted about Imagecopy v4.1 being released at
he beginning of this month so here are the details. Sounds good.

==========
stapplications/imagecopy #823, from j_hughes, 3498 chars, Jul 1 22:56 97

TITLE: New Features in Imagecopy 4.1

1. User interface

+ Support for the VA_START protocol. This allows images to be loaded into
an active version of Imagecopy when it is run from third-party desktops.
+ The ability to drag and drop images under MagiC and MultiTOS. Images
which are dragged onto layout and catalogue windows are added to the
page or catalogue.
+ The ability to iconify windows under MagiC, MultiTOS, or Geneva.
+ Imagecopy's menu window can be minimized using the full button (or
[Insert]). This toggles between the full size and a minimal size
containing just the menu bar.
+ Windows cam be closed while other images are being processed.
+ With AES 3.99 and greater (MagiC, MultiTOS, Geneva etc.), windows are not
topped except by a single mouse click. This allows images etc. to
be accessed from untopped windows.
+ Configurable keys for close window, next window, and previous window.
+ [F1] can be used to show or hide the menu window.
+ Imagecopy detects when it is autostarted from MagiC.
+ Imagecopy works in all video modes under MagiCMac.

2. Image formats

+ An option to save IMG images with VDI palette order. This is useful for
creating IMG files for programs that expect colours to be arranged in
this order (e.g. Thing or True Paint).
+ New readable image formats: APX blocks, XBM images, 320x200 XGA images.
+ The ability to read and write Huffman-compressed TIFFs. Imagecopy now
supports all baseline TIFF formats.

3. Printing

+ An option to adjust the printed page size. This allows images to be
printed to large-format (A3 etc.) printers which default to a smaller
page size.

+ When using the print-to-file option, page layout files which contain several images are saved into a single PRN file unless the page needs to be fed back for adjacent images (in which case two or more PRN files are created).
+ Support for old (pre-1983) Epson printers.

4. Copying

+ Imagecopy can use GEM routines for copying images. This allows images to be copied on systems which do not provide low-level LineA routines (e.g. MagiCMac or MagiC without NVDI).
+ An option to snapshot the top window on screen (contents or contents plus borders).

5. Catalogues

+ An option to collect catalogue images into a directory.
+ If you locate an image when updating a catalogue, Imagecopy automatically locates other images which have been moved to the same directory.
+ The ability to drag images from catalogue windows onto other catalogue or page windows. Under systems which support drag and drop it is also possible to drag catalogue files onto other application windows.
+ If a catalogue has not been given a file name, Imagecopy creates a default name from the catalogue's title.

6. General

+ Ability to load and save custom palettes for viewing or converting images.
+ Ability to load and save printer and system INF files.
+ If images are loaded into Imagecopy from the desktop or another application, holding down the [Shift] key displays a dialog which allows the images to be printed or converted (instead of viewed).
+ A slideshow image is unloaded before loading the next image if it is there is not enough memory to keep both images in memory.
+ [Clr/Home] toggles between displaying an image from the top-left and centring the image.

7. Bug fixes

+ All known bugs have been fixed.

Jeremy

==========
stapplications/imagecopy #824, from j_hughes, 718 chars, Jul 1 22:56 97

TITLE: Imagecopy 4.1 Prices

This is the current price list for Imagecopy 4.1. The full program is £10 cheaper than it was a year ago, and the upgrade from 4.0 to 4.1 is only £4.95 plus £1.25 p&p.

Imagecopy 4.1 £24.95
Imagecopy 4.1 PhotoCD £29.95

Upgrade from Imagecopy 4 £4.95
Upgrade from Imagecopy 2, 3, 3.5 £9.95
Upgrade from Imagecopy 1 £14.95

Postage and Packing £1.25

If you upgrade from Imagecopy 4 you don't need to return any disks. For other upgrades please return disk 1 (or disks 1 and 4 when upgrading from a PhotoCD version). To upgrade from a non-PhotoCD version to Imagecopy 4.1 PhotoCD add £5 to the prices given above.

Jeremy

675. Re: 2-chip SIMMs for TT

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: nroughley@unix.dsoe.com
Message-ID: <5qmqu3gln1@news.gt.ca>
Source record: 119587

I replaced the 2-chip SIMMs with the 8-chip type and everything is running fine now. Thank you to those that sent e-mail and responded here.

The 4 megs of TT RAM I took out ended up to be 100ns chips. The 16 megs put in is 70ns, and things are 'peppier' now, helped somewhat with the release of Geneva 6 that I just installed.

Before replying, check my real address below.

I am thinking about putting my Quadra 900 25mhz RC040 Mac up for sale. The logic board and powersupply are fine. I kind of hacked it together with a used case I purchased from some guy in NewYork. It's missing the front bezzels and is not to pretty. With the Afterburner and Nemesis installed in my Falcon, the Mac seems a little slow:). Actually it runs MagiC Mac pretty fast. I'm just testing the waters to see if many would be interested if I set it up with a minimun configuration for MagiC Mac. That would probably include an 80mb SCSI drive and 16mb of ram. I'll install System 7.5.5, but don't expect ANY other Mac software. If your drives are AHDI compatible, you can connect them right to the Mac and MagiC Mac has no problem reading them. The only bugger about this machine is that the serial port is not wired for hardware handshake, so if you plan to do a lot of data transfers over wire, you will have to mod the port (see Apple's info site for specs about this model). NetScrape worked fine. Keyboard, mouse and Lapis switch (lets the mac be connected to non-mac monitors) is included. There is lots of shareware that the machine runs fine, but I tried some new KP Bryce stuff and the machine basically pukes:). The logic board is about the same size as the TT/Falcons, and you "might" be able to hack it into a PC case. The powersupply is a different matter. It is about the size of two shoe boxes end to end:). It has upgraded video memory and can display 800*600 24bit color. I have MagiC Mac and NVDI for MagiC Mac as well, but we would have to do some dealing to get them included. I have some bench marks from Gembench somewhere showing how it performs. It will render a model over three times faster than my 32mhz Mighty Sonic Falcon with fast ram installed using Phoenix (definetly not included). Calamus and Papyrus work fine too. Anyway, if your interested, drop me a line. I don't want to set it up for nothing, so serious responses please.

>as well as 1040STE.

Quite a few differences. STF means ST+internal _F_loppy drive. STE means ST _E_nhanced. The STE is an enhanced STF with additional stuff like stereo DMA sound, stereo sound output ports, blitter chip (accelerates graphics), extended colour palette (4096 instead of 512), Standard SIMM memory sockets (up to 4Mb) and 2 extended joystick ports (hardly ever used).

>I am also looking for software for it, so if you know some net
>addresses where I can find freeware/software for it as well as the

Take a look at the Quick FAQ (see my .sig). The main software FTPs are ftp://ftp.ibp.fr and http://www.umich.edu/~archive/atari/

on the umich one, there's a file called starters.tos or something like that, that is an auto-extracting archive containing stuff to decompress the other files.

>I would be very happy if you let me know.
>I tried some programs I found, but the most ones didn't work (Why?). I

Good question. Can you be more specific ? Which programs? what didn't work ?

>also saw many times stuff for Spectre. Is Spectre a Macintosh
>emulator? Where can I find it?

Yes. It's an old commercial program. It needs a special cartridge with mac ROMs and emulates something like a Mac Plus. It's quite hard to find and you'll only find it second hand.

: get the two to work together with the CAB for MiNTnet v1.81 overlay.

I'm not sure what you mean by "*.CON" files, but mint.cnf should not
necessarily have anything to do with this.

I beleive some versions of CAB 2 had a bug which prevented them from
working properly with the CAB-for-MiNTNet v1.81 overlay. This might be the
cause of the problem.

It would help if you would include a more detailed explanation of the
problem. Also, it is important to know whether the problem really is with
CAB 2 and the overlay, or does your network connection not work at all?
(For example, can you use other network software without problems?)

I have little information on how things work on the PC end (Win 95 help
files are not technical). I just set up a direct connection & the PC waits
for a connection on the serial port.

Maybe the Win 95 version of PPP is not compatible with the ST version ?

I have a second STFM, with no hard drive, I may try setting up MiNTnet on
it & connection ST<->ST.

I have a few questions that I hope someone can answer.
Is there an upgrade to MUSICOM,version 1 by Compo Sofware?
Do they have a web page or e-mail address?I tried calling their
number and a message came up saying that the office was closed.I'll
try again today.
The recording quality seems pretty good and I was wondering if it would
be possable to master a CD with it.
Has anyone had any experience with this program?
Thanks

692. QuickTOS Bombing. Why?

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: david@forbidden-planet.org
Message-ID: <david-1807971053000001@gaxiola.vip.best.com>
Source record: 119604

Hi all,

There was some recent discussion of trying to load old versions of TOS using a ROM image. After someone mentioned a program called qtos, I decided to start searching the Internet for some trace of it. Eventually, in the umich archives, I managed to find a program called QuickTOS, written by the infamous Darek Mihocka. I grabbed it, read the enclosed docs and decided that this is what I was looking for.

I managed to "find" some old TOS ROM images lying around (1.0, 1.02, 1.04, 2.06) and started trying them one by one by renaming appropriate image TOS.IMG. When I launched QuickTOS, things looked okay, it gives a "Loading TOS.IMG..." message, but then things go wrong. For version 1.0, I get a garbled screen. For the other versions, I get four bombs and then get thrown back to my old GEM desktop.

I think, "Hey! Maybe these images are corrupt?" I go grab a copy of TOSDump and make a brand spankin' new image of my Atari's own ROMs (version 1.04). Unfortunately, when I run QuickTOS using this newly created image, I also bomb. My old crash reference states that four bombs is "illegal instruction." Hmmm... not too good.

I'm using a 1040STf. I added a clock chip beneith one of the ROMs, could that be interfering some how? Anybody use QuickTOS recently? Any clues as to what I could be doing wrong?

Thanks in advance,
--David

: No, as shareware it was fine but I won't spend on it. Sorry.

Of course, what you choose to spend your money on is your decision, but I think you are not being fair. You apparently have a small amount of RAM (CAB will load JPEGs until it runs out of free RAM, so a lack of free RAM is probably what is keeping the larger JPGs from loading) and no hard drive (otherwise, why are you trying to run external modules off of a floppy disk?), and yet you are demanding as much from CAB running on that system as you see in Netscape, which would never even give you the time of day on a system with so few resources.

Adding built-in e-mail and newsgroup browsing would just add to the size of the program, exacerbating the memory problems you are apparently already experiencing.

I think CAB does a marvelous job of doing what a web browser should do, while working within the limited confines of the computers we all own.

> Finally, what is the latest version of HD Driver, and what
>advantages would it have over version 6?

Yes, you can do this, but you need additional software support if you
want to be able to share devices between the multiple hosts. SCSI bus
arbitration is only the first step, which prevents hosts from garbling
each other's communication on the SCSI bus. However, within the OS on
each host, you will have problems like e.g., the filesystem driver on each
machine caches disk data. So if one host modifies a shared disk, the
other host won't see the modification. When both hosts start concurrently
modifying disk data, they will very likely overwrite each other's
operations.

There are two possible solutions to this problem - smart drivers on each
host, that alert each other when they are making changes to shared resources.
Or, promiscuous drivers on each host, that listen to every transaction on
the bus. These drivers can then force their own host's caches to be updated
simultaneously with the actual bus operation. I think this approach is most
efficient, but very few non-Atari's can operate in promiscuous mode on SCSI.

Yes, I have tried the demo and if the full version CANNOT cope with Progressive JPGs then it is not an option as a commercial product.

It is not just Prog JPGs that it has difficulty with. Large JPG files (200K+) are ignored too. This is not acceptable as more and more large and Prog JPG files are being incorporated into Web designs. Even for off-line work!

It also needs a built-in mailer and newsgroup reader aka Netscape. On a single floppy machine (STf) try getting it to run external modules via disk-swaps... doesn't work!

No, as shareware it was fine but I won't spend on it. Sorry.

I picked up one of these drives recently but it had no power supply
with it. Does anyone know the power specs? I think these drives were
for use on both the ST and Atari ABC PC compatables but I'm not sure

708. AutoView Updated

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: !ynoT
Message-ID: <33d168d2.1412883@news.airtime.co.uk>
Source record: 119620

This prg has been updated.....here follows the PRG Read_me

STOSSER Software 1997 Programmed by Tony Greenwood,
http://www.airtime.co.uk/users/stosser

AUTOVIEW

Should Work on All TOS Versions capable of ATARI Low rez
Boots from low or medium, or Auto Folder
Works on PC Using Pacifist
Can be installed as an APPLication
Sound support if Needed, Chip or Sampled,
Supports Packed Animations, Packed Music
It is FREEWARE
Fully configurable from well documented .cfg file, Paths ect

The object of this little program is to allow the Auto viewing of
Cyber SEQ files (No File selector or messages about the prg ect)
An example would be an Intro to a program, make your SEQ and place
its filename in the AUTOVIEW.CFG and away you go..Not only will it
cleanly play your Animation.. but More,

CYBER.SEQ files pack down amazingly well, My program supports the
following ATARI Packers,
Atomik v3.5,
Ice v2.4,
Fire v2.2,
Automation v5.1,
Speed v2.0 or v3.0
Only tested on Ice v2.4 but excellent compresion...

In the fully documented AUTOVIEW.CFG you can set the Animation to
Loop or play once only,

You can set a Chip Music file to play, the following types of
Chip Music are supported,

1. Mad Max 11. Megatizer 21. Nexus
2. Count Zero 12. Synth Dream
3. Lap #1 13. Big Alec #2
4. Lap #2 14. Ben Daglish
5. Big Alec #1 15. Lary
6. Ninja Turtle 16. Reserved
7. Zound Dragger 17. Reserved
8. TAO (chip #1) 18. Lap (1 scanline)
9. Titan 19. TAO (digidrum)

10. LTK 20. TAO (chip #2)

The program automatically checks for a Falcon Computer and if
found then the Chip Music will NOT play as this can crash Falcons,
You can pack the chip music with any of the above packers,

You can set a Sampled sound to play instead of Chip Music,
In the AUTOVIEW.CFG you can set the Speed, Playback, Stereo and
lots of other Sample playing options,

A nifty Feature is the ability to set it to play CHIP and
SAMPLED Sound...If the program detects an STe or better, it will
play the SAMPLE, But if it detects a FM or less then it will play
the CHIP Music instead, (The FM or less could not handle the
Sampled sound)
The above means you can set the program and know the best machine
will get the best results....good or wot!

NOTE ** Do not pack sample files, They don't pack down well anyway

AUTOVIEW Stops and cleanly exits to the desktop (or next program in
the Auto Folder on pressing the spacebar,

The program has been fixed on compiling and therefore will NOT
NOT need to be fixed to run on TOS 206 or Falcon:) although it
may not like some falcons, I do not know?

You can now install AUTOVIEW as an APPLICATION, Simply highlight
the AUTOVIEW.PRG Then go to the desktop drop down menu...select
INSTALL APPLICATION and where appropriate at file name type SEQ,
Don't forget to save the desktop, then whenever you double click
on a CYBER.SEQ file it will be instantly displayed,

Cheers !ynoT (ATARI Programmer)

stosser@airtime.co.uk (Tony Greenwood)

>Just the usual - ImageCopy 4.

If you have access to a PC then there is a freeware util from the JPG
Group's homepage that decompresses/compresses and generally poke's
about inside JPGs.

Here is the info file...

The Independent JPEG Group's JPEG software
==

This distribution contains MS-DOS executable copies of version 6 of the
Independent JPEG Group's free JPEG software. You are welcome to redistribut
this software and to use it for any purpose, subject to the conditions under
LEGAL ISSUES, below.

This software should run on any MS-DOS machine with DOS version 3 or later,
although we have not tested it with anything older than DOS 5. You can also
run it in a DOS window under Windows 3.x, and it should run under OS/2 as
well. A minimum of 450Kb of free conventional memory is recommended.
Extended or expanded memory is helpful; the more the better!

For usage instructions, see the file usage.doc. Useful information can also
be found in the JPEG FAQ (Frequently Asked Questions) article, posted
regularly in the Usenet newsgroups comp.graphics.misc and news.answers.

Please report any problems with this software to jpeg-info@uunet.uu.net.

LEGAL ISSUES
============

In plain English:

1. We don't promise that this software works. (But if you find any bugs,
please let us know!)
2. You can use this software for whatever you want. You don't have to pay u
3. You may not pretend that you wrote this software. If you use it in a
program, you must acknowledge somewhere in your documentation that
you've used the IJG code.

<snip>

SOURCE CODE
==========

The source code from which this software was generated is freely available.
The "official" archive site for the source code is ftp.uu.net (Internet
address 192.48.96.9). The most recent released version can always be found
there in directory graphics/jpeg. This particular version is archived as
graphics/jpeg/jpegsrc.v6.tar.gz. If you are on the Internet, you
can retrieve files from ftp.uu.net by standard anonymous FTP. If you don't
have FTP access, UUNET's archives are also available via UUCP; contact
help@uunet.uu.net for information on retrieving files that way.

You can also obtain the source in DOS-compatible "zip" archive format from
the SimTel archives (ftp.coast.net:/SimTel/msdos/graphics/), or on CompuServ
in the GRAPHSUPPORT forum (GO GRAPHSUP), library 12 "JPEG Tools". Note
these versions may sometimes lag behind the ftp.uu.net release.

Note that the user interface used here differs from the Unix-style user
interface found in the main IJG distribution. Source code for the DOS user
interface is in file jpegaltui.v6.tar.gz at ftp.uu.net.

You are welcome to use the source code in other JPEG-related programs.
The conditions for doing so may be found in LEGAL ISSUES, above.

The executables in this package were compiled using Microsoft C 6.00A.

The JPEG FAQ (Frequently Asked Questions) article is a useful source of
general information about JPEG. It is updated constantly and therefore
is not included in this distribution. The FAQ is posted every two weeks
to Usenet newsgroups comp.graphics.misc, news.answers, and other groups.
You can always obtain the latest version from the news.answers archive at
rtfm.mit.edu. By FTP, fetch /pub/usenet/news.answers/jpeg-faq/part1 and
../part2. If you don't have FTP, send e-mail to mail-server@rtfm.mit.edu
with body
send usenet/news.answers/jpeg-faq/part1
send usenet/news.answers/jpeg-faq/part2

713. Bloodwych and PaCifiST - can anyone get it work

Newsgroup: comp.sys.atari.st
Date: 1997-07-18 00:00:00 UTC
From: Grings <bnr4065@iol.ie>
Message-ID: <01bc93c4$035c8780$LocalHost@bnr4065.iol.ie>
Source record: 119625
Cross-posted to: comp.emulators.misc,comp.sys.atari.st

Just wondering if anyone has been able to get Bloodwych to work under
PaCifiST. I've tried everything I can think of but haven't had any luck.
The game is protected by Rob Northern (ah yes, one of the rewards for
actually paying for the game...) which seems to rely on the a Sector of
Track 0 having a checksum error. The game works okay on the ST.
Does anyone have any idea if it is possible to get it to work with PaCifiST
short of hacking the whole program?
Any comment welcome since I'd really like to play again.

Sorry to inform you but you can't hook up the parallel version of this drive to your Atari and have it working. You need the external SCSI version along with the LINK II cartridge + appropiate drivers for it. If you haven't opened it up yet, I would suggest that you trade it in for a SCSI one.

B > I also saw many times stuff for Spectre. Is Spectre a
B > Macintosh emulator?

Yes.

B > Where can I find it?

It is a commercial hardware/software emulation. CeeJay Software in
Illinois, USA is selling them for $50 USD. They may not have a whole
lot of them. Spectre never ran System 7, iirc.

This was even worst, because it made Knews crash without any warning, and
it took some time to figure out that this was the reason.

I just obtained HDDriver version 6 in the hope it could handle the Jaz drive: BEWARE! It can't disable the media copy protection. This has to be done on a PC.

Fortunately there are plenty of them around...

> Yes, I have tried the demo and if the full version CANNOT cope with
> Progressive JPGs then it is not an option as a commercial product.

The full version does handle progressive JPEGs as well as the demo
version. CAB does not display these images as soon as the first few
bytes are downloaded, that's right. But these images are displayed.

> It is not just Prog JPGs that it has difficulty with. Large JPG files
> (200K+) are ignored too.

No these images are not ignored. You'll probably need more memory to
display them. Remember: JPEG images are compressed images, so a
file size of 200K could end up in an uncompressed image which can
easily need 2 MB - 3 MB of RAM (or even more).

> This is not acceptable as more and more large and
> Prog JPG files are being incorporated into Web designs. Even for off-line

> single floppy machine (STf) try getting it to run external modules via
> disk-swaps... doesn't work!

Sorry, but a 10-12 years old single floppy STf without harddisk is
really not the right machine to run modern software.
CAB will work on these machines but many features are missing.
To see all of CAB's features you should have a harddisk, a screen
resolution of at least 640x480 in 256 colours, NVDI 4 (with vector
fonts), a multitasking OS (like MagiC or N.AES) and at least 4MB
of free memory (this is all standard on a normal PC or Mac for
several years and even on ST this is not unusual).

The problem I have found is not CAB but the ovl try the ovl 1.2 the
sites which crash on the 1.25 are fine with the 1.2 ovl I use cab 2.0a
Yahoo has a problem in education lists crashes after the first bit of
info. Swich to the older ovl works fine. The mail in the older ver ovl
however does not work correctly in cab2. ovl 1.25 works fine though.

>for mail and ftp, but running CAB (the web browser) requires a MB by itself, so
>2 MB is the minimum to go for. And WWW is normally what is meant if someone asks
>how to go Internet.

And this is precisely why I didnt get on the net a couple of years
before I did and why a lot of ATARIans are still not on the net.. It
doesn't matter which way you cook it people.. you can go on the
internet with ONE MEG AND A FLOPPY SYSTEM you can use mail, irc, ftp
and news...with a one meg floppy system you can also go on the web..

It aint easy and I fully agree that more memory and a hd is a lot
better, But I can not understand why people are constantly putting
fellow ATARIains off getting on the net by telling them they need
more?... There are people out there with such a minimum system.. lets
stop putting them off.... You can do it with a ONE MEG.. that is one
hundred percent positivly sure..

All the software will work on a one meg... CAB I offered the option
that maybe an older version...simply because I used the original on a
one meg.. but others have since come forward and aksed why? when they
are using 1.5 on a one meg..

So lets try NOT to do what the atari magazines did.. lets tell people
YES you can get on the web with a minimum one meg and no hd.. but add
that its not easy and more memory and a floppy would be better.. I
think encouraging fellow ATARIans onto the net is better than
constantly telling them there setup isnt good enough...

From: claude@ime.net
Message-ID: <5qqje8llk1@news.ime.net>
Source record: 119552

When I am reading a news article and I used the mouse pointer and put it on the scroll bar or arrows for longer than one click, I can no longer select another article or have access to the drop down menus. The mouse pointer is still able to move around. The only way I have found to solve the problem is to reboot my TT.

Does anyone else have this problem. Any suggestions on how I could correct the problem would be appreciated.

Claude Bourgoin

Version 0.79 is beta. I *KNOW* it is found on on ibp.fr
(ex CNAM), but this was leaked out of the testing team.

There are many unusual things not yet resolved in 0.79;
better downgrade back to 0.78 until 0.80 is released.

ALL: those having problems reading the bit to Claude really
should get my ISO-8859-1 font on my page. Accents will
not show correctly, using US-ASCII. You should upgrade
to proper ISO 8bit charset and view using my compliant
font (or any other font/remapping of your Atari system
character-set that is ISO-8859-1 compliant).

Claude,

Si t'as d'autres probl�mes avec ton TT ou STiK, tu peux

Hello,

I have a very strange formatting problem ... I have two drives one DD
and the other HD ... Each operation read/write/copy works perfectly
.. but it is now impossible for me to format any kind of floopy ...
on both drives and with any configuration .... with TOS desk, with
Neodesk desk and even with Kobold ....

The message I receive is the following:

"Check drive or insert a disk" ...

Please do not answer here as it's now very difficult for me to connect
to the news server ...

Thanks

I'm not sure. I think you'll only need a multitasking OS (for
example MagiC, MagiC-PC, MagiC-Mac, N.AES/Mint or MultiTOS).

If you don't use multitasking you'll definitely need STiK or
STinG.

The STFM has a build in TV modulator, so you can connect it to a TV,
great for playing games, animations etc.

cheers

That's not funny at all, Wolfgang is a physicist like me (high energy physics
in Wolfgang's case), who use to spend extended times outside their home country.
Just like I had an australian address for about a year.

> high telephone bills.

Which is of course bullshit, which I can tell as I live right in the
middle of Germany. It's true that it's getting harder to find an ISP
that offers plain uncompressed SLIP, but it's probably rather easier,
than harder, than in the rest of the world.

This guy is talking about T-Online (German Telekom as ISP), who offered
only CSLIP, and only recently started migrating to PPP. Many people use
T-Online with STinG, which supports CSLIP for quite a while now.

>>>PPP-Connect is a short, easy to install internet routine with PPP and
>>>alternatively SLIP. It runs with the new CAB Version CAB 2.5.
>>
>>And can only be bought WITH the new CAB version. You cant by it
>>seperatly. At least not on ASH homepage.

And probably has a proprietary API, which makes it impossible to use
other Internet applications like telnet, mail, news, irc, etc. unless
they are made or distributed by ASH.

> I have telephone bills every month about 100$. The only reason why it

Fine, that it will for you, but a lot others are quite satisfied with
STiK or STinG, and for those it is offensive, or even insulting for
the programmers, to call their product obsolete, especially as it is
freeware, contrary to PPP-connect.

Thanks for the reply!

Yes, NEWSie is the big problem, here. The first time I tried CAB with
STinG, it felt quicker. The second time I tried it, I probably just
ran into a bogged down network. Not unusual, here. Then tried NEWSie
and figured I had a generic problem of some sort.

>Are you sure you got
>the latest STinG version installed ? If your CAB.OVL is not V1.25 (Look under
>CAB's 'About ...' menu entry) I'd strongly suggest to try this too.

Definitely up to date with the versions. I'm sure you're right, I
spend more time with NEWSie than CAB and that is really where my
problems lie.

Thanks for the candid reply. Your efforts are very much appreciated!

these are just not scsi limitations but gemdos ones !!!!
under other file systems it's possible to have several drives
under the same letter ,even if it's not very useful :-))
regarding to the cdrom jukebox it depends on the model
number but usually it is ONE scsi ID because the cd's
are manipulated with particular scsi disposal commands
to validate one or another for use ......
(scsi commands MOVEMEDIUM (0xa5) ,
EXCHANGE MEDIUM (0xa6) and so on....)
how would you manage a 10CD nakamichi with only 7 ID's?
(and the 200 CD DENON ???)

But how would accents get across in 7-bit format? While it may suit
the English language, "umlaute" and accents are not included in 7-bit
character sets.

�nd it's not just due to memory restraints? How silly!

>It also needs a built-in mailer and newsgroup reader aka Netscape. On a
>single floppy machine (STf) try getting it to run external modules via
>disk-swaps... doesn't work!

Mail and newsgroups is something I'd rather let separate programs
handle. I dislike the Netscape mailer and news readers and I don�t
want them eating memory. I use dedicated news programs and mailers on
all platforms.

>No, as shareware it was fine but I won't spend on it. Sorry.

I wonder how WebSpace/WenSuite will fare.
What I'd really like to see is realtime rendering of the pages. I have
no desire to sit around and wait for a page to be rendered and
downloaded. It's very annoying to sit online, having to wait for all
components of a page to be downloaded. Almost every other graphical
browser can handle that, save for CAB. Throw out the online Overlay
and implement internal TCP/IP support, so we won't have to wait.

751. ST screen resolutions and frequencies

Newsgroup: comp.sys.atari.st

P> certainly not for that guy.

Don't stop working on STinG, please, we need a PPP-package for *every* Atari.
AFAIK the PPP-kit from ASH needs MagiC :(

P> Don't worry that I'd stop finishing the PPP part, though ;-) I'm getting

Hi Tom.
The simplest way to do this is to change the text files into ASCII.It
is easily done even with 1st word. Your IMB will then be able to read
them without problems as IBM compats can read ST formatted discs.

Pete.

I think you are right about the ovl, but how come I can only use ovl
v. 1.18, anything else is not working on my system. And teh mail in CAB
works fine with that ovl file. At last here.

I just tested ovl v. 1.25 this morning, it resolve the host, and then
nothing happen, it just sit there and wait. If I hit the ESC key for
some time (2 - 3 min.) CAB will crash and I'm on the desktop.

: I don't need multitasking,- don't like it is more correct.

You do not need MagiC to run CAB v2.5, at least not the current
betaversion (I use it under MiNT/N.AES). I can't see any possible reason
why CAB would be made to work only under MagiC, so I don't think this will
be a problem.

Well unfortunately there is nothing CAB can do about lack of memory - if
you don't have enough memory, you won't be able to view big pictures. The
problem will go away if you add more memory.

: It also needs a built-in mailer and newsgroup reader aka Netscape. On a

CAB is a WWW browser - not a mailer or a newsreader. I would prefer that
CAB remains this way. By the time a decent mailer and newsreader was added
to CAB, your complaints about memory and disc usage would be much worse!
When a want to look at the WWW I use CAB, when I want to look at my email
I use Pine and when I want to look at the news I use tin. There are
several disadvantages with integrating these: You end up with a huge
program that is bulky and inconvenient to use; the individual parts of the
program cannot easily be updated, etc.

: single floppy machine (STf) try getting it to run external modules via
: disk-swaps... doesn't work!

I think you are lucky that CAB works at all without a hard disc drive.

If you want Netscape, go ahead and get a huge hard disc drive, heaps of
memory, a hugely fast CPU...

760. CAB and RAMdisks

Newsgroup: comp.sys.atari.st
Date: 1997-07-20 00:00:00 UTC
From: al@london-calling.demon.co.uk
Message-ID: <869399544.736.0.nnrp-2.c2dea73f@news.demon.co.uk>
Source record: 119493

Greetings fellow Atarians!
I've a small prob (not major) with CAB.
I'm using v.1.5 and it seems to run ok
and accesses most sites on the Web. However,
as I'm using my STE 1040 (2meg, TOS 1.62)
without a hard drive, I wondered if I could
speed up the writing to my second drive where
my Cache folder is by using a RAM disk.

No joy, no matter what programme I used.
"STik not initialised - cannot read config"
is the message when I slect it from Desk meenu.

Any thoughts aanyone?
Much obliged

761. ST game cheat program for over 100 games - FREEWARE/EMAILWARE

Newsgroup: comp.sys.atari.st
Date: 1997-07-20 00:00:00 UTC
From: martin@pugh.prestel.co.uk
Message-ID: <5qt0nd$a5a$1@neptune.theplanet.co.uk>
Source record: 119494

I have made my program 'The Cheat Machine V3.00' for the Atari ST freeware/emailware . It allows you to cheat on over 100 games (both commercial and shareware) and it supports over 40 different program packers. It's also compatible with the excellent PaCifiST ST emulator, it's available for download here:-

http://www.geocities.com/SiliconValley/Vista/3468/stchtmac.zip

ABOUT THE CHEAT MACHINE:-

THE CHEAT MACHINE is a program that allows you to cheat on those games which you would otherwise not normally play. By simply selecting a program file and entering a few 8 character alphanumeric codes you can add new life to those games gathering dust in your disk box. The type of cheat is not just limited to the boring infinite lives, where ever possible I have made the cheats a lot more useful, infinite lives alone doesn't always make games more 'user friendly'! In fact some of the games featured have their own cheat modes which are put to shame!!

The following games are supported :-

AARON (ST REVIEW ISSUE 6)
ABOMBINABALL (ST FORMAT ISSUE 47)
ACE INVADERS (BUDGIE UK)
ALIEN BLOCKADE (ST USER JAN 1990)
AMMOTRACK (ST ACTION)
ANDROMEDA (ST USER NOV 1994 ISSUE 106)
ARKANOID 2 - REVENGE OF DOH (OCEAN) [SUMMER PACK]
ATTACK OF THE DANGEROUS ALIEN GUN TURRETS FROM JUPITER'S THIRD MOON
ASTEROIDS (ST USER AUG 1993)
AZARIAN (V0.87)
BALLS (ST FORMAT ISSUE 46)
BALLS (ST USER NOV 1992)
BALLZONE (ST FORMAT ISSUE 11)
BELLUM (ST FORMAT ISSUE 6)
BERT THE SQUIRT (BUDGIE UK)
BEYOND THE ICE PALACE (ELITE) [SUMMER PACK]
BLACK LAMP (FIREBIRD) [SUMMER PACK]
BLASTER (ST FORMAT ISSUE 65)
BLASTEROIDS (IMAGEWORKS)
BLOX 2.0 (ST USER SEP 1992 ISSUE 79)
BOING (ST USER SEP 1991)
BOMBUZAL (IMAGEWORKS) [POWER PACK]
BOMBJACK (ELITE) [POWER PACK]
BREAK IT (ST USER JUN 1992)

BREAKANOID V1.0 (ST FORMAT ISSUE 65)
BUGGY BOY (ELITE) [SUMMER PACK]
CENTIPEDE (ST FORMAT ISSUE 43)
CHOPPER X (MASTERTRONIC) [SUMMER PACK]
COLOUR CLASH (ST FORMAT ISSUE 48)
COMBAT (ST USER OCT 1994)
CRITICAL MASS (ST REVIEW ISSUE 17)
CYBERNETIX (ST FORMAT ISSUE 40)
CYBERSNAKE (ST USER SEP 1992 ISSUE 79)
DALEKS (ST USER JAN 1991 ISSUE 59)
DARK PEARL (ST REVIEW ISSUE 20)
DEFENDER OF THE CROWN (ORIGINAL RELEASE VERSION)
DROID (ST FORMAT ISSUE 37)
DUCK DASH (ST USER MAY 1992)
EDDIE EDWARD'S SUPER SKI (MICROIDS) [SUMMER PACK]
ELIMINATOR (HEWSON)
ENTOMBED (ST FORMAT ISSUE 30)
ESCAPADE (ST USER JUL 1992)
FIRESTORM (ST FORMAT ISSUE 4)

RAYOID (ST FORMAT ISSUE 46)
REAL GHOSTBUSTERS (DATA EAST)
RETURN TO GENESIS (FIREBIRD) [SUMMER PACK]
REVENGE OF THE MUTANT CAMELS (ST FORMAT ISSUE 31)
ROADWARS (MELBOURNE HOUSE) [SUMMER PACK]

ROBOTZ (ST FORMAT ISSUE 14 & NCE ISSUE 148)
ROCKFALL (ST USER ISSUE ??)
SECONDS OUT (TYNESOFT) [SUMMER PACK]
SHAPESHIFTERS SMALL DEMO (BUDGIE UK)
SIDEWINDER (MASTERTRONIC)
SKULLDIGGERY (NEXUS/ST ACTION)
SLUG (ST USER JUL 1992)
SNACMAN (ST FORMAT ISSUE 60)
SPACE INVADERS (ST USER DEC 1989)
SPOOKS (ST/AMIGA FORMAT ISSUE 5)
SQUISH (ST FORMAT ISSUE 49)
STARBALL (ST FORMAT ISSUE 64)
STARQUAKE (MANDARIN) [SUMMER PACK]
STOMP (ST FORMAT ISSUES 47 & 55)
STONE AGE DELUXE
SUPER BREAKOUT (ST USER AUG 1990)
TERMODROID (ST FORMAT ISSUE 59 SUBSCRIBER DISK)
TEST DRIVE (ACCOLADE) [SUMMER PACK]
THRUST (FIREBIRD) [SUMMER PACK]
THUNDERCATS (ELITE) [SUMMER PACK]
THUNDERSTRIKE (MILLENIUM)
THURG & MURG (ST REVIEW ISSUE 21)
TIME BANDIT V0.96 (MICRODEAL)
TRI HELI 2 (ST FORMAT ISSUE 57 & ST USER MAR 1994)
VIOLENCE (ST USER APR 1994 ISSUE 100)
VIOLENT DEATH (ST USER OCT 1994)
WELL 'ARD (ST FORMAT ISSUE 61)
WINGLORD (ST USER JULY 1994)
WIZBALL (OCEAN) [SUMMER PACK]
XENON (MELBOURNE HOUSE) [SUMMER PACK + POWER PACK]
ZAP (ST USER MAY 1992)
ZYNAPS (HEWSON)
ZYNAPS (HEWSON) [SUMMER PACK VERSION]

The following packers are supported (note: any of the games can be packed with any of these packers the cheat machine will recognise the packer used and take appropriate action) :-

4 PAK
ATOMIC PACKER V3.3/3.5
AUTOMATION PACKER V2.31/2.51/5.01
BRANCH ALWAYS PROGRAM PACKER V1.00
BYTEKILLER V1.7
DCSQUISH V1.4
ESCAPE PACK V2
FIRE PACKER V1.01/2.01
HAPPY COMPUTER PACKER
ICE PACKER V1.13/2.11/2.20/2.31/2.34/2.40
IVORY DRAGON PACKER V3 (SINGLE/MULTIPART)
JAM PACKER V1.0
JAM PACKER V3.0 (LZH/V2 ALGORITHMS)

JAM PACKER V4.0 (ICE/LZH/LZW/V2 ALGORITHMS)
JEK/LSD PACKER 1.2(d)
LSD COMPACTOR V1.0
PFX 1.13P
POMPEY PIRATES PACKER 1.5/1.9A
SPEEDPACKER V2.0
+ 9 other unidentified game loaders\packers

If you only have a few format a floppy to 720k ON THE PC anduse that.

If you have a lot get Ghostlink (an ST utility). Youcan then transfer
them over a null modem connection.

heres a guess.... your ramdisk is C ?.. then maybe CAB or STIK recognises C as a HD boot and looks there for stik.cfg ect,

try
1) rename your ram disk to D or soemthing.
or
2) copy your stick stuff onto the ram disk.. this should work, pretty sure it will :)

764. NVDI & CPX's

Newsgroup: comp.sys.atari.st
Date: 1997-07-20 00:00:00 UTC
From: jklimch@curly.cc.emory.edu
Message-ID: <5qt6l3$1dc@lendl.cc.emory.edu>
Source record: 119497

Hi all,

I just installed the version 4.11 upgrade for NVDI & I'm having some problems. For a start Z-control no longer will load. I tried two different versions (.33 & .35 I believe. They are the versions available for ftp at umich & cnam). Both gave me huge numbers of bombs. No problem, I figured. I'll just install COPS which came with NVDI instead. This didn't work so well either as COPS needs WDIALOG.PRG in the auto folder & COPS won't recognize it when run in the folder (I tried various combinations & orders for my auto folder to no avail). So now my choices appear to be to use X-control which works fine but it's kind of a waste of the processing power of a falcon with Geneva or run WDIALOG.PRG then COPS from the desktop. This works but it's a lot of extra steps to access CPX's. Has anyone had any similar experiences or suggestions?

Thanks in advance,
David Klimchak
Composer & Performer

765. Will SF354 copy files to 720k DOS disk?

Newsgroup: comp.sys.atari.st
Date: 1997-07-20 00:00:00 UTC
From: ChrisB@media.pa
Message-ID: <33dc388f.404727003@news.psu.edu>
Source record: 119498

I have a old 520ST which I havn't used in a few years, but I would like to copy over a few text files to my PC...but my problem seems to revolve around having a single-sided drive.

I've heard that I can format a HD disk at 720k in my PC and placing it in the ST to copy a file to....

I tried this and I get a "Disk is full" message on the ST...although it does write the name of the file....a zero-kb size file.

I also tried reformatting this disk in the ST (as single-sided..that's all I can do) and when I place it in the PC it gives a message that the diskette isn't formatted (would you like to format it now?)...as all my ST disks do in the PC also.

Is all of this because of the older single-sided drive? Do I need to get a double sided drive? Anything to do with TOS?

If so what is the model number of a double sided drive appropriate for a 520ST and where can I get one?

I'm also trying to copy some text files to my PC...but I'm having some
problems likely caused by the fact that I've got a single-sided ST
drive...please see my post below.

>If you have a lot get Ghostlink (an ST utility). Youcan then transfer
>them over a null modem connection.
>
I've got a chicken-and-egg problem here...I can only download stuff to
my PC...but I can't get it into my ST...because of the ST not being
able to read disks from the PC and vice-versa.

Is there an app like Ghostlink/Laplink which will run from the PC
without any extra software being needed to be loaded into the ST?

The problem is that the high bit is often lost via Usenet as it was
intended only to be a 7-bit medium or the character will be interpreted
differently depening upon what software/computer is used.

Was there supposed to be a :) instead of a ! at the end of that sentence?
Gezz, it is not like you purchased these apps and were told that a ppp
connection was possible.
Show a little fu*%&ng respect for these programmers. I don't have the
foggy as to how they do what they do, and I respect them for that.
If the people that are upset because a "freePPP" is not available under TOS
there are always other machines.
If you really have a bitch, go to the advocacy group and air out your feeling
there. Sinclap will confort you, and the programmers don't have to put up with
the shit. They need feed back, not dogging.

If you have any terminal programme whatsoever than that shoudl be OK,
you can then just load up a terminal ont eh PC and do a standard X,Y or
Z modem transfter via a standard null-modem cable.

772. FS: 7-20-97 (update)

Newsgroup: comp.sys.atari.st
Date: 1997-07-20 00:00:00 UTC
From: danbrown@cet.com
Message-ID: <5qtpp2$6jt@legends.cet.com>
Source record: 119505

7-20-97 >>>>>> [][] ATARI Clearence SALE [][] <<<<<< 7-20-97

If it's not listed, it's been sold!

Item : Complete External Hard drive setup
Host Type: ICD Link
Megabytes: ~90mb formated
Type Case: Plus Impulse flat case
~ size : 13"(width) 2.5"(height) 14.5"(depth)
Comments : Includes DMA cable, Power cord, ICD software
Comments : Plug 'n Play - Autoboot w/ICD
Asking : $125 + shipping

I'll be happy to load the hard drive with shareware/pd software.

[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]
M I S C
[-][-][-][-][-][-][-][-][-][-][-][-] [-][-][-][-][-][-][-][-][-][-][-][-]

If you want something listed below - MAKE ME AN OFFER!

Item : ATARI LAZER 'adapter' box. I can't remember what these are
called.
Comments: But they are the boxes that plug into the computer
and the lazer printer plugs into this box. Comes with the
Lazer printer cord. And 1 DMA cable (as it's built into the
box) This box also has a DMA pass-threw.

Item : 6 (?) MFM hard drive mechs.
Comments: I don't know what works, and what doesn't. They all did work
when I put them in the box, but I cannot test them at this
point.

Item : Blitz Cables
Comments: Allows you to backup your software fast and easy!

Item : ST Sound Digitizer
Comments: Made by Hippo, includes software and cartridge

Item : Video 1000-ST
Comments: Includes Cart and german (paper) docs. Screen rez enhancer (?)

Item : Video Key
Comments: Lets you hookup your atari to a TV

Item : Mouse Master
Comments: Lets you click over between a mouse and a joystick on 1 port
(usually 0)

Item : 1040 power supply
Comments: Needs plug put back on (which I still have)

Items : SwitchBack
Comments: Difficult to explain what this is. This lets you save anything
to RAM or a file. (Not the best explanation, but best I
can do)

If you have any questions, or your interested in one of the items
listed above, PLEASE Email me! All funds must be in US Dollars.
If you respond here, PLEASE keep the same title so that I can easily
find it.... I will ship ANYWHERE.

One final note: If you email me wanting something, make sure the return
email is good. If it's not, leave me a good email address in email! thanks

>
>Is all of this because of the older single-sided drive? Do I need to
>get a double sided drive? Anything to do with TOS?

Yes. The solution is to get the PC to format to 320Kb but I have heard
that some PCs refuse to recognise so small a capacity.

Alternatively you may be able to find an ST utility which will format
to PC standards. There are some around but I'm afraid I have forgotten
their names.

The root problem is that early TOS make a mistake in formatting drives
so they are not recognised by PCs. The work-arounds are:

Getting the PC to format the disc
Upgrading the ST TOS to one which gets the formatting right
Getting an ST utility which formats to the correct PC standard
Using Ghostlink to send the files to the PC over a null modem cable

>If so what is the model number of a double sided drive appropriate for
>a 520ST and where can I get one?

OR, most expensive of the lot, getting a 720K ST drive! Almost any one
will do but the other options are cheaper.

Message-ID: <01bc9558$095d4760$e799bfcc@default>
Source record: 119507

A year ago I sold my Falcon030, with MagiC as the OS, and bought a Pentium150. I like the Pentium, but find Windows95 to be a wee bit flakey when compared to any TOS OS.

Can anyone fill me in on what has been happening with Atari in the last year? Things were fairly thin at this time last year when I sold the Falcon. Please respond either here in the group or to me through e-mail.

Particulary, what has been happening with CAB and STiK? Web browsing was a major reason I went with the Pentium. What are the new releases of software, either commercially or through the UMich FTP site? I may be the only person in the universe contemplating this, but I miss my Atari and might get back into it!

That was historically true, but nowadays most of Usenet accepts the
8-bit transfer; everywhere, it is some software that sometimes lost the eighth
bit, because things like WWW and so on pass in 8-bit by the same way... I have
even read that for Usenet, the standard was now 8-bit coding, and only the
mail still doesn't always accept 8-bit.
This is at least the situation in Europa; may be things are different
in North America...

I didn't know that any standards had been set but yes MOST sites will preserve it now, sadly that doesn't mean all and is most likely to include the less well connected countries and that probably includes a lot that require the accented characters. The fact is that the 8-bit character sent from a DOS PC will be different on a Mac, different on a Windows PC, different on Atari etc.

CAB 2.5 will work without multitasking. But many features
of CAB 2.5 will be only available with multitasking. The
PPP-Connect software which is included in the CAB 2.5
package also needs multitasking.

So ,without multitasking you'll need STiK or STinG.

Right you are, Roger, as I just received my 0.80 beta with a note stating that 0.79 was now released to the public. But there WAS a leak, as this was reported about a month ago, through discussions on the STiK beta-testing list after some total stranger found it.

John Rojewski apparently replied to one of the testers that since the 0.80 beta was about to be sent for testing, there was no need for concern; 0.79 was already slated for release as soon as leaks were reported.

Greetings from 1stfamily,

As we all know unlimited Internet access is $19.95 / month
with every major Internet access company. From Netcom to
AT&T that price never changed. So what makes us any
different when we are also charging $19.95 / month ???

Our Marketing Plan.

Our method is this. Unlimited Internet access for $19.95 per
month. If you find our service to be extremely satisfactory,
in which we are sure you will, you can refer our service
to 10 of your friends and family. If you do , you will get
free Unlimited Internet access with your e-mail address
for life !

What we offer is this:

* The fastest, clearest Internet access in the world.

* World Wide Internet access in over 110 countries.

* An e-mail account that is also life time free if you refer
10 of your friends and family to using our service.

* America On-line for only $10 / month !

* Much much more that will amaze you !

Our plan is by the year 2005 we will be the world's ONLY
Internet service providers. With our technique of offering you
life time free Internet access we will be.

Please visit our web site http://www.freeisp.com/ any where
from the world to know more about our opportunity and to even
get on the wagon before every one else beats you there.

http://www.freeisp.com/

Please forward this message to all of your online friends. Wouldn't you
want all of them to get free Internet access ?

Abdul (SPONSOR ID # SAF5197)
Stop paying for Internet access !

It sounds like the problem being the single sided drive.

Have you tried formatting disks on the PC with MS DOS ? Windows only gives you the choice between 1.44M or 720K, but the DOS format line command can format (theoretically) all the old formats, including single sided 360K. The problem here is that most modern PC drives no longer have a single sided mode, so this solution is far from guaranteed.

Second idea: Get a standard PC drive mechanism, and stick it in you SF354 box. You might have a few jumpers to change on it, so make sure the correct ones are present (jumpers tend to disappear with standardization). There is a text file at the following addresss about changing an internal floppy. It shouldn't be much different or an external one:

ftp://ftp.sn.no/user/hallvart/atari/info/sony_144.zip

If this is a one-time operation, it might not be feasible to invest in hardware. You can probably call for a generous soul to convert your SS disks to DS so the PC can read them. I would do it, but you'd better find someone closer to you.

Hope this helps,

Nick

: : > able to read disks from the PC and vice-versa.

Ooooops...sorry...I missed this part the first time...
By all means, if it turns out you have a single sided drive in your
st...find out how to get DOS to format a single sided double
density 3.5" floppy disk. It's been so long since I've used DOS that
I've forgotten how!

Your ST CAN read PC formatted disks, as long as they are 720k format,
or in the case of a single sided drive, 310k format.

If you can't find a way to get disks formatted properly...try formatting
one on your ST, and then run something like norton utilities, or disk-fix
on the disk in your PC. It should fix the very minor difference in the
disk formats.

793. StiK StinG Problem

Newsgroup: comp.sys.atari.st
Date: 1997-07-21 00:00:00 UTC
From: Stephane LANDIER <slandier@icon.co.za>
Message-ID: <33D30C86.6872C361@icon.co.za>
Source record: 119434

I have a problem connecting to my provider with Stik & Sting, a US Sportster 33.6K voice modem (the latest ones, plug & play) & a Falcon (Tos 4.04), HSMODEM7
I managed to set everything up, and everything looks fine : I connect, the login scripts goes well, and I get my IP address (which means that I

receive data). But after that : nothing. Ping 127.0.0.1 doesn't even work, packets are sent but not received.
I never seem to receive any data after I get my IP address. (which is relevant and in the range of my provider)
Is it a problem with the initialization of my modem (I use a dumb ATZ) ?

I tried & install HSMODEM7 but it didn't do any good.

If there is a specialist around here, help would be very appreciated.

Steph

From: Austin <ajwalshe@deakin.edu.au>
Message-ID: <33D2FE76.2E4A@deakin.edu.au>
Source record: 119437

Hi All

My Falcon has recenly developed a fault when recording to disk either from an FDI unit or straight in to the Falcons Analog input. A kind of crakerling distotion occurs which is shown as singleline strokes on the graphic of the audio. I am using Cubase Audio version 2.04 The Falcon is a standard machine running 14 meg.

Has any one experienced this problem or does any one have any idea to probable causes and perhaps solutions?

Austin Walshe

You can always try http://www.dejanews.com. Do a power search for
"~g fr.comp.sys.atari", set number of hits to 100 and sort by date. It works
for me.

That newsgroup isn't very useful anyway, the guys on there don't stop flaming
each other. The international newsgroups are much more helpful.

Nick

I've discussed the URL length limitation with Alexander Clauss. I haven't
seen a fix just yet. Currently the problem is this - CAB is written in
Pascal, and URLs are stored in Pascal strings with 1-byte lengths. That
means the longest allowable URL is 255 characters. The Internet RFCs
specify no length limits for URLs, so in this respect, CAB is not conforming
to the Internet standards. I suggested to Alexander that he define his own
string type, using 2-byte lengths, to raise the limit to 65535, which ought
to be enough for the foreseeable future. I don't know whether or not he
plans to fix this. Just one of the downsides of the usual Pascal string
data type...

>system as you see in Netscape, which would never even give you the time of
>day on a system with so few resources.

Good points. Although, it seems a valid point that CAB does not handle
progressive images. This is an unfortunate side-effect of the fact that
CAB expects its network overlay to return complete files to it, and can't
work in parallel with the network. (Of course, I wouldn't really expect
so much from it, running on a monochrome display - it has to both unpack the
image *and* dither it, before drawing onscreen. Quite a bit more involved
than just unpacking pixels into a window buffer...)

>Adding built-in e-mail and newsgroup browsing would just add to the size
>of the program, exacerbating the memory problems you are apparently
>already experiencing.

Yes, but a single program with all of those features could be written to
use less memory overall than having to load three different programs.
Of course, CAB was never intended to have direct support of networking
functions built-in, so leaving them as external modules makes sense. As
you point out, a single program with everything built in probably would not
fit on a large number of STs...

Hi Jared.
I could not make it work either.
Tried everything.
However CAB 1.5 works fine!

I wrote to Howard Chu about it.
He claims that there is a BUG in CAB 2.0 (Same one as in the demo??????)

: look at the source and change a few things.. this wont help you get on
: the actual site.. but it will nail the problem for you.. rename all
: the GFX to shorter filenames ect..

I can't imagine what the length of filenames could have to do with
it.

: Do the changes one at a time... until CAB dont crash.. then look at
: the other pages that cause a problem and make the exact same change..

That sounds like a sensible way to pin down the problem.

Perhaps it would also be worth trying different overlays, in order to
determine whether the problem is in CAB or the overlay.

From: savarez@connectum.skurup.se
Message-ID: <869489146_OASIS_@connectum.skurup.se>
Source record: 119443

Have tried using Newsie for a while now.
The mail operates quite well with nicknames now more stable.(V0.79)
(V0.78 Used to crash now and then.)

The other day my newsserver was down and did not allow Newsie to connect.
Newsie locked up in an eternal loop.
Dialogue said 'press Esc to abort', but it certainly did not.
Had to reboot the machine with lost sectors on the disk etc.

Same problem applies to FTP access.
If the server does not respond, Newsie locks up.

The program MUST NOT lock up!!!!!!!!!!
A good praxis is to use a time out.
Also the ESC key has to be recognized.

Another problem:
My phone line went down during a news download.
Newsie kept on downloading although there was no connection.
The articles that it never got were entered as 'no subject' articles
with size 0.

They ought to be noted as never retrieved!!!!!!

Hello,

Dans l'article <19970720235703974375@pwomar.demon.co.uk>,
Paul Womar, <Newsmaster@pwomar.demon.co.uk> a crit :

I didn't know that any standards had been set but yes MOST sites will
preserve it now, sadly that doesn't mean all and is most likely to
include the less well connected countries and that probably includes a

The less well may be also the most recent one, so there must be 8-bits
I suppose. But I must say I don't know.
The matter is: the only standard way to have accents on Usenet is
8-bit encoding with ISO charsets, quoted-printable is limited to e-mail, so
countris that need accents must have 8-bit connections... And if no, the best
way to make them use it is to use 8-bit so that users ask the change (or
change of provider - as it is only a software limitation).

lot that require the accented characters. The fact is that the 8-bit
character sent from a DOS PC will be different on a Mac, different on a
Windows PC, different on Atari etc.

Theorically not, because the standard for accents coding on Usenet is
ISO-Latin 1, so software dealing with news must encode messages with this
coding and no one else (to be exact there are other possibilities in fact, but
all ISO and so independant of the hardware).
But some software are not clean, and some user forget (or don't know)
how to configure ther software so there is sometimes problems.
In fact, quoted-printabe changes nothing to that matter of encoding,
as the symbol after the = is the ASCII-code of the encoded character, in the
charset defined in the header (normally an ISO one); if the client doesn't
recognize the ISO, its quoted printable will be false...

Why not, indeed, it's far more fun!

The latest STiK is stable and fast. CAB has gone commercial through
ASH but the last Freeware version (1.5) is very functional. Newsie
grows in functionality by the month (thanks for the address book,
John).

If you really find PPP necessary (under GEM) there is a promised
browser/mailer/newsreader from Oxo which will do the job. STiK and
STinG are well on the way to supporting PPP, too.

>If there is a specialist around here, help would be very appreciated.

I'm no specialist, Steph, but have spent a good few days recently
experimenting with setting up similar comms. s/w on my new TT :-))

For a start I would suggest you ignore STinG for the moment. It's a
very nice program with a lot of promise but current versions WILL give
you problems. I have experienced corrupt messages and downloads which
have disappeared since I set up STiK. Mind you, I certainly got as far
as getting it working - which is more than you have managed ATM :)

You will need the DRVIN and SCC modules of HSMODEM in AUTO. DRVIN must
be loaded before SCC. Use SETTER to set these parameters:

DRIVIN

FASTINT ON
EXOPEN OFF

SCC

M2TT NO
M1EMU "u"
LANBIT OFF
LANEXT OFF
LAN_S2 "u"
DTRM2 ON
DTRS2 ON
M2DR1 OFF
S2DR1 OFF
RBLM -> TBLS all 8192

Reboot with these settings and run LISTPORT which you should find in your STiK package. This should indicate that your Modem port is now capable of 38k4, 57k6 and 115k2. Run a normal comms program like Connect and try ATZ at these speeds. Smile if it all works!

Check your STiK configuration. You should be set to Modem 2. Initially set BAUD_RATE to 19k2.

Use MODEM.CPX to set 19k2 on your modem port and Save it.

Re-boot. You should have STiK as a desk accessory. Tell it to connect. When it does have a go with one of your clients (CAB, Newsie etc.)

If you are still smiling you can now experiment with different DTE BAUD_RATES. You need to change 2 things to effect them.

1. The BAUD_RATE in the STiK configuration.
2. The baud rate set by MODEM.CPX. For 38k4 set 110, for 57k6 set 134 and for 115k2 set 150. Got it?

57k6 is a good speed for a DCE of 33k6 - if you can get the kit to use 115k2 without error so much the better.

Good luck!

I suggested the above after looking at the source to the webpage that the problem occured....the filenames where extraordinarily long... I personaly presumed CAB would shorten them to a more ATARI type redable format.. much Like other prgs do..like DOS does.. ok... they where very long.. there is a good possibility that shortening them can confuse.. ie: try loading a nice big jpeg picture as a sperator or a wide seperator into a small area..ect... this may of course not be the case.. but if all else fails then its surely worth a shot :)

809. Re: Mint Questions

Newsgroup: comp.sys.atari.st
Date: 1997-07-21 00:00:00 UTC
From: curis@jonque.ens.fr
Message-ID: <5qvofj$7eq$1@nef.ens.fr>
Source record: 119450

Hello,

All my answers are not tried; they are given because of the claimed
similarity between Mint & Unix.

Dans l'article <5qv1j4$ii8@einstein.ebicom.net>,
Brian Roland, <bjr@Edison.EbiCom.Net> a crit :

2. How do I change the character set from ISOblahblahblah to
standard US ASCII?

What for? ISO-Latin and US-Ascii are identical for characters 0 to
127 [all letters], and US-ASCII doesn't define anything from 128 to 255.
If you mean the Atari-encoding (which is not US-Ascii), I don't
know... May be the LC_TYPE variable, but I don't know the name of the Atari
set (may be simply atarist ? or default?). You will also need the corrects
fonts in your fonts directory.

5. Is there a way to rename the terminal type to vt52?
When I telnet into places, they have no listing for vst52 and
I get bounced to dumb mode and must set it manually to vt52 (when
possible). Better yet...can I install that ANSI auto folder
program that is so great, and make the whole thing ANSI/VT100?

Try the TERM environment variable - setenv TERM vt52, or TERM = vt52 ;
export TERM (it depends of the shell you are using).

6. Can I set things up so that messages (Such as the pppdialer) are
sent to a log-type file rather than to my console?

If it is really like Unix, try (name of programm) (commandes) >
name_of_file.

Hi Michael,

what kind of problems do you have? There was definitely no :) in your
posting. I guess my mail was much more friendly than your subsequent
comment. I DO respect these programmers. Anyway I wonder what kind of
feed back you personnaly are waiting for.

Alex

811. Atari ST Quick FAQ - v1.4

Newsgroup: comp.sys.atari.st
Date: 1997-07-21 00:00:00 UTC
From: bales@garonne.stortek.NOSPAM.com
Message-ID: <5qvut7$ql0$1@news.stortek.com>
Source record: 119452

```
THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the
same questions over and over again, here is a quick list of the most
Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following
address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

Charles T Stanley <stanley@stanley.wintermute.co.uk> writes
>Can anyone solve these problems for me, please?
>
>1. Oasis2 will not deal with emails received via POP3:
>I mean that though emails are received (Incoming dir) they are not resolved
>or presented for reading. Usually they are simply deleted! I have to use
>Harlekin to read them before quitting ICE. And of course I cannot reply.

Why not use POPwatch instead. Oasis2's POP3 support doesn't work very
well, but POPwatch's does :)

>2. I cannot get Oasis2 to Expire News (as selected).
>This is immediately important with the nearly SIX THOUSAND spams just
>waiting on the server to pounce on me.
>==== Hold it! I've just found the answer: change Time Limit to zero.

I gave up Oasis2 and news because of the spam problem :(
ICE was just too slow and buggy to cope with the problem.

4MB of FREE memory??????

Then you'd have to use a Falcon or TT.
As far as I know ST, STE and MEGA STE:s are limited to 4MB total.
Then some is used for ACC:s, HS-modem alternative desktop and MiNT.
My machine is VERY tight on memory alyhough I have 4MB!

David Gaxiola (david@forbidden-planet.org) wrote:
: Hi all,

: There was some recent discussion of trying to load old versions of TOS
: using a ROM image. After someone mentioned a program called qtos, I
: decided to start searching the Internet for some trace of it. Eventually,
: in the umich archives, I managed to find a program called QuickTOS,
: written by the infamous Darek Mihocka. I grabbed it, read the enclosed
: docs and decided that this is what I was looking for.

: I managed to "find" some old TOS ROM images lying around (1.0, 1.02, 1.04,
: 2.06) and started trying them one by one by renaming appropriate image
: TOS.IMG. When I launched QuickTOS, things looked okay, it gives a
: "Loading TOS.IMG..." message, but then things go wrong. For version 1.0,
: I get a garbled screen. For the other versions, I get four bombs and then
: get thrown back to my old GEM desktop.

: I think, "Hey! Maybe these images are corrupt?" I go grab a copy of
: TOSDump and make a brand spankin' new image of my Atari's own ROMs
: (version 1.04). Unfortunately, when I run QuickTOS using this newly
: created image, I also bomb. My old crash reference states that four bombs
: is "illegal instruction." Hmmm... not too good.

: I'm using a 1040STf. I added a clock chip beneith one of the ROMs, could
: that be interfering some how? Anybody use QuickTOS recently? Any clues
: as to what I could be doing wrong?

: Thanks in advance,
: --David
: (:

Yes, I know what you are doing wrong. QuickTos (suggested by me) will
only work with the original TOS.IMG that came with the 520's. No ROM dump
files (surprisingly) will work.

Source record: 119461

Hello Roger,

r> Alternatively you may be able to find an ST utility which will format
r> to PC standards. There are some around but I'm afraid I have forgotten
r> their names.
I think *any* disk utility which isn`t as old as TOS 1.0 itself should handle
that.

r> The root problem is that early TOS make a mistake in formatting drives
r> so they are not recognised by PCs. The work-arounds are:
To be honest: It`s not the fault of the early TOS, it`s the fault of
Microsoft which aren`t fullfilling their own specification :-(

Later on, TOS writes simply the same as Microsoft (therefore you have no
troubles to read a PC disk with the older TOS, because TOS is working fine,
fullfilling the MS specifications :-)

r> Getting the PC to format the disc
But (of course) use DD disks, not HD one ;-)

And: You *can* format on PC with the correct format! As FORMAT /? on MS-DOS
7 shows, you have these options: /F:360 = 360 KB, /1 = single sided, /T:80 =
tracks, /N:9 = sectors

Greetings, Oliver

Where do you want to go today? *I wanna go my own way!*

Yes, my 4 meg Falcon can get pretty tight in the higher resolutions, like True Color VGA, what with NVDI, Geneva, and Neodesk running along with CAB and STiK, etc..

Fortunately, you don't need to own a Falcon to have more then 4 megs of memory. I was just at the Aixit home page looking at their Magnum memory expanision card for my Falcon, and I noticed they have a memory module for _all_ ST's that can give you up to 15 megs of memory. Ironically, the maximum for the Falcon is still 14 megs.

Newsmaster@pwomar.demon.co.uk (Paul Womar) said:-

[8th bit char]
>yes MOST sites will preserve it now, sadly that doesn't mean all

Yes, not really 100% all, but the wide majority. There is a french FAQ about this subject, and it says all Usenet server softwares are "8 bits clean" for many years. You have to travel back in time until the prehistoric BNews to find a server stripping the 8th bit. CNews, DNews, INN, MS Information Service, Netscape server, etc... are all clean.

There is also no problem for 8bit chars in headers, even if there is not yet an RFC to officially state it.

>The fact is that the 8-bit character sent from a DOS PC will be different
>on a Mac, different on a Windows PC, different on Atari etc.

Not true: with correctly written newsreaders all these machines should send (and receive) only ISO charsets. So everyone can read the same thing on any computer. Sadly Oasis 1.35 or Newsie don't do it. Okami does the conversion for ISO-Latin-1 (AKA ISO-8859-1) charset.

Bye! Bruno.

> What is the best and easiest way to network a LAN port equipted Atari
> (TT, MegaSTe, Falcon) and a Macintosh with STing? Can the Atari Laser
> Printer be used for both machines?

I'm not sure if the Appletalk port at your Mac is supported by some software
driver (HSMODEM, for instance) on the MagiCMac. If it is, then just go ahead,
the STinG package should do it, although I haven't tested it on the LAN port.
It might be worth an inquiry to Harun Scheutzow, if he has a HSMODEM driver
for the Apple port yet.

Note too it might be a little tricky to get the ST to use the same port speed
as the Mac, but this depends mostly on the driver on the Mac side.

Cheers Peter

Oops... Forget the word 'free'. I mean: at least 4 MB RAM (that
means at least about 2.5 MB of free memory)

> As far as I know ST, STE and MEGA STE:s are limited to 4MB total.

No, AFAIK there's a RAM card to expand these old STs up to
15 MB of RAM.

> Videlity

Well I have got a Afterburner040 and I just love it. It does what I want
it to and it gives me the speed I want as well. If you are after the
fastest accelerator available for the Falcon there is only one. Okey it's
a bit expensive but for me it was worth it. It's like getting a completely
new computer!

Take a look at my webpages if you want to.

If you want to know anything else, just ask me and I will try to
answer.

On this TT with Geneva/NeoDesk running with STiK, NEWSie does not
show this problem. So far, John and his testers have done a great job.

hi, :)
I am on the east cost of the us.
In your mint.cnf, change accordingly the variable TZ.
Mine is:

setenv TZ EST5EDT

>
>2. How do I change the character set from ISOblahblahblah to
> standard US ASCII?
well, why would you want to change that? everyone is trying to install
to iso characters! and you want to go backwards?!?!

>
>3. How do I add new users...and set them to super-user status if wanted?
there is a utility if youdon't want to do it manualy, called ADDUSER
0.09, comes from linux, and draco has ported it about 3 weeks ago.

>
>4. What is the best way to set the console resolution?
the console or VCONSOLE?
The CONSOLE normally depends upon the AES you use.
The VCONS are hardware depandant. The file VCON* have to be patched,
or changed , just to fit your hardware. Let's say you have a NOVA, you
can change some parameter in the C code, (all explained), and then
recompile it..
Look in your folder, /usr/etc/ you have several vcons. I(I have made
mine for the falcon with special colors to suit my need :)

> Anytime I log into the console without launching an AES,
> it goes into some really blocky 40 column resolution with massive

> 80 column 2 color Falcon mode.

change the type of VCONS you run.

>5. Is there a way to rename the terminal type to vt52?

> program that is so great, and make the whole thing ANSI/VT100?
>
well, here: The atari have VT52 builtin. The vcons are vt52 type
(st52, stv52, tt52 etc).
To run VT100, you have 2 solutions:
1) run toswin.
2) from a vcons, you have to upload your TERMCAP file to your provider
and make it recognize the STV52 or TT52 (or whatever) terminal.
Thus you can actually run program like PINE(which doesn't work on
vt52), on a VCONS with stv52 terminal type :)
If you run BASH, you can change the terminal type on the fly with a
command like:

export TERM=stv52

>6. Can I set things up so that messages (Such as the pppdialer) are
> sent to a log-type file rather than to my console?
You can redirect it to wherever you want. Just look in your file
/etc/syslog.conf

>1. How can I get Geneva to "properly" launch as the AES?

No idea here.

> can easily boot the aes in different resolutions. I will
> consider something like N_AES if it is as fast as Geneva, and
> allows me to use NeoDesk4 as the shell.
Well I don't know, but from what I heard, GENEVA still is not perfect
with mint. About the speed I heard that geneva is SLOWER than naes.
Neodesk should run under naes, but again, I heard that neodesk didn't
support all the VA protocol. Not sure though. Not that it will really
matter, but still..

>
>2. Might there be a way to bypass the init.prg of kgmd, and boot straight
> into Geneva while obtaining permissions to all the files on the minix
> partition? Wouldn't this save a good bit of memory?
yes, :) but then you are removing the vcons (:(((((((), and removing
the multiuser aspect of mintos.

> I've noticed that on my 14meg Falcon, my Geneva set-up takes

Hi Cristian

I strongly doubt that any parallel devices work with the Atari range
(except printers of course).
Your best bet would be to buy an external zip, a host adapter such as
ICD link or the Translator and a copy of HD driver....
I hope this helps...

Hi
You will need a later version of HD Driver to partition the drive.
HDX will work for some drives, but others it fails as you found out.
ICD format has never failed me when a troublesome IDE drive shows up
when it comes to partitioning. V7 of ICD SCSI Tools Pro will be available
within a week from the U.S. You should be able to find someone with V6.5.5
which will work good for setting up the drive.

846. CAB v2.5/PPP/ASH

Newsgroup: comp.sys.atari.st
Date: 1997-07-21 00:00:00 UTC
From: csilver@kendaco.telebyte.NoSpam.com
Message-ID: <5qupon$kmq@news.telebyte.com>
Source record: 119519

Hi All,

There have been quite a few posts about CABv2.5/PPP/ASH. I just have a few questions that are not *personal* about developers, but about availability here in the USA and how well it works.

1) Is it available in North America?

2) If it only works "as advertised" in a multitasking environment, does that include MultiTOS?

3) Are English docs included?

4) With this PPP connection can you run NEWSie, AntMail, PopWatch? If not, is there a workaround?

I can run MultiTOS/MiNT1.12/AES4.10/NVDI4.11 on my 14meg Falcon/Nemesis. I do *NOT* have MagiC/Geneva/N.AES as a multitasker.

I think these questions are plain enough without causing emotions to be a point of order or discussion.

Regards,

Charles

QuickTOS was designed to get certain STs to run one particular TOS version (I'm not sure, but I think it was to boot 1.00 on 1.04 machines). I didn't get it to run on my STE, either with ROM TOS 1.62 or TOS 2.05 or any other TOS.IMG.

The universal TOS loader program still has to be done AFAIK. Come on you programming folks! this can't be a mission:impossible thing to do!

HDDRUTIL requests the number of sectors from the IDE drive. If
nevertheless the drive's capacity is displayed wrong in the HDDRUTIL
partitioning dialog box there might be something wrong with your drive.

It can. A lot of HDDRIVER users have done it before. Take your JAZ,
read/write protect a cartridge with HDDRUTIL or HDDRCONF.CPX and
deprotect it again. This will work.

The M stands for Modulator. STFMs have an RF Modulator allowing them to be connected to TV antenna for using the TV as a monitor. An STE also has this, since it is actually an enhanced STFM.

Actually I suspect that STFMs were also equipped with TOS 1.04 whereas STFs had TOS 1.00. Can anyone confirm this ?

YOu can find a list of all Atari ST based machines and specs at
http://www.users.zetnet.co.uk/aseabrook/a_models.htm

: > I've got a chicken-and-egg problem here...I can only download stuff to
: > my PC...but I can't get it into my ST...because of the ST not being
: > able to read disks from the PC and vice-versa.

That's odd! Well...your ST can read PC floppys...
Try this...

1. Get a double sided "DOUBLE DESNSITY" floppy disk. You should have
a few of these laying around, but if not, take a HD disk and put tape
over the "untabed" hole. Stick it in the PC, and format it. If
your ST can't read this, then you've most likely got a single sided
disk drive in it. If this is the case, check your DOS manual to see
how to format a single sided disks, or post to one of the dos news-groups
and ask how. Or, you could always upgrade your ST disk-drive...they're
really cheap these days.

If still no luck, then use the ST to format it, and go to
ftp://atari.archive.umich.edu, or one of its mirrors like
ftp://ftp.toad.net/umich, and search for a little
utility that converts your ST floppy.

: > Is there an app like Ghostlink/Laplink which will run from the PC
: > without any extra software being needed to be loaded into the ST?

The easiest way...
If you have an inexpensive for flat rate isp with storage space, then
simply upload the files from one machine, then download it back with
the other. Alternatively, you can do the same thing with a free BBS
in your area that lets you upload and download files.

You can also use a null=modem cable, and hook the two machines directly
together...use a standard term program on both ends...set one to host or
answer mode, and do an x, y, or z modem download.

Aloha,
I finally got around to installing the KGMD package to my Falcon.
"BIG THANKS TO KELLIS" for the english installation package!

Now that I seem to have it up and running pretty well. I have
some simple questions that fall dumb due to my lack of unix experience.
There are a lot of questions below...and if you're itching to help
out, but don't have time or knowlege to wade through all of them...please,
just pick out the ones you have time/ansewrs for and cut the rest...don't
feel the "all or nothing complex" as I'll take any free advice on the
matter, however little or much :) Also, if you know of a good FAQ or
"ENGLISH" manual installation that will address most of these questions,
please direct me to it. Again...I only understand english...last time
I tried to translate german docs I trashed my whole system!

1. How do I change the timezone from dutch or what-ever to CST?

2. How do I change the character set from ISOblahblahblah to
standard US ASCII?

3. How do I add new users...and set them to super-user status if wanted?

4. What is the best way to set the console resolution?
Anytime I log into the console without launching an AES,
it goes into some really blocky 40 column resolution with massive
letters that get cut in half near the bottom of the screen; sometimes,
the console "alt F10" is solid black and the monitor clicks when
swapping consoles (as if there were a resolution not supported by
my SVGA monitor?). Logging into a tty, it seems to stay in a standard
80 column 2 color Falcon mode.

5. Is there a way to rename the terminal type to vt52?
When I telnet into places, they have no listing for vst52 and
I get bounced to dumb mode and must set it manually to vt52 (when
possible). Better yet...can I install that ANSI auto folder
program that is so great, and make the whole thing ANSI/VT100?

6. Can I set things up so that messages (Such as the pppdialer) are
sent to a log-type file rather than to my console?

Now back to mint specific questions...

1. How can I get Geneva to "properly" launch as the AES?
So far, I've had best results keeping all path and environment
settings under drive U:\path, but Geneva refuses to properly
find the newdesk.inf file for setting the resolution. Setting
Geneva "Not" to use newdesk.inf will at least get me into a

color mode, but if I ever change resolutions, I have to boot
clean into geneva in that resolution first (without mint),
and reset "ALL" of geneva's settings again...windows, fonts,
the whole nine yards! Somehow, geneva.cnf is getting corrupted?

I've also found that Geneva will only load under mint if it's
set to NP (mintnp.prg) mode.

If I boot geneva under mint using drive C:\path(s), it usually
can't find anything it needs...no accs loaded, can't find
resources, etc...

I really want to use Geneva and NeoDesk here...it's SOOO much
faster than AES 4.1 (The commercial one that came with my Falcon)
and I already have a layout that's a joy to use and it took
years to get it that way! I've at least got it working, but
I'm looking for solutions to the "resolution" problem so I
can easily boot the aes in different resolutions. I will
consider something like N_AES if it is as fast as Geneva, and
allows me to use NeoDesk4 as the shell.

2. Might there be a way to bypass the init.prg of kgmd, and boot straight
into Geneva while obtaining permissions to all the files on the minix
partition? Wouldn't this save a good bit of memory?
I've noticed that on my 14meg Falcon, my Geneva set-up takes
less than 1meg under plain TOS, but over 10meg under mint.
Is that normal?!? Memory comparisons with AES 4.1 are similar
so I don't think Geneva/NeoDesk is grabbing more memory than
it normally would. Maybe the other virtual consoles are snagging
most of that 14meg?

3. Anyone know of a good "tos in a window" program that supports vt100
or ANSI so I can open a shell such as tcsh inside my AES and access
various unix tools from there?

Welp...guess that about it for now...
Thanks in advance for any help...

Brian

855. Falcon: Fastest Reliable Modem Speed?

Newsgroup: comp.sys.atari.st
Date: 1997-07-21 00:00:00 UTC
From: bjr@Edison.EbiCom.Net
Message-ID: <5qv312$ii8@einstein.ebicom.net>
Source record: 119528

Aloha,
I'm wondering what the fastest reliable setting for modem2 on
a Falcon is. My modem supports two port speeds...57,600, and 119,000 (or
something close to that). The higher setting gets a lot of garbage
characters when logging into my isp with ConNect. Is that normal?

I realize my modem can only go 33,600, so a higher setting
wouldn't do much good, BUT, if I wanted to network to my PC using
a null modem, I'd like to go as fast as possible...so again.
What is the fastest Baud rate a stock Falcon can do?

Thanks,
Brian

>

Your best bet is to find an ST user near to you who can transfer the files
from 360K disks to 720K disks. If it's only a one time operation, it can be
feasible. I would happily do it for you, but the postage to France and back
would cost more than it's worth. I'm sure someone her will volunteer.

However, if you plan to do transfers like this on a regular basis, and if you
still plan to use your ST, it will certainly be worth replacing the single
sided drive by a 720K or 1.44M model (PC standard will do fine). They cost
next to nothing nowadays.

>What are the horizontal and vertical frequencies of ST High?

From the Atari ST Quick FAQ:

ST High ST Low/Medium
Vertical refresh rate 72 Hz 50 or 60 Hz
Horizontal refresh rate 31.5 Khz 15.75 Khz

I guess you're set!

If Ping to 127.0.0.1 doesn't work, then you haven't switched STinG on. Go
to the 'STinG Internals' CPX and click it active. Have you read the FAQ ?

> Is it a problem with the initialization of my modem (I use a dumb ATZ) ?

If you really manage to log in, as you describe, than this is probably fine.

> I tried & install HSMODEM7 but it didn't do any good.

I have yet to find a system where HSMODEM would do more bad than good. Mind
you, you gotta install it correctly.

860. FS:Early 520ST, SM124 Monitor

Newsgroup: comp.sys.atari.st
Date: 1997-07-22 00:00:00 UTC
From: Tim and Mary <timandmary@worldnet.att.net>
Message-ID: <33D59144.7E7F@worldnet.att.net>
Source record: 119283

I have one of the earlier 520STs for sale, which has been upgraded to
2.5 mb. The upgrade was pretty large, so I didn't have the nerve to
screw the top back down, but it's on there nonetheless. It DOES have TOS
in ROM, not on disk anymore. Also inlcudes an external Indus GTX-100
disk drive, Atari Mouse, and Atari SM124 Mono Monitor.
These have been closet items for several years, and I'd like to get
$75 for the lot, buyer pays shipping (depends on where you live).

If interested, please e-mail me. Thanks!

Tim

Hi Austin,
The most probable cause is that the hard disk is fragmented, so use a
de-fragmentation program (Diamond Edge or CHKDSK3) to get it working again.
You could also check out my homepage (still under construction, but
partially finished) and get some various tips in the troubleshooting
section.

Best regards,
Claes

Have you succeeded in sending Email via CAB? I haven't...

>
>I think CAB does a marvelous job of doing what a web browser should do,
>while working within the limited confines of the computers we all own.
>

Except for one major snag (which I believe has been mentioned here before:
if you try to get page of selections from any search engine like Deja-News
or AltaVista, CAB will not request the next page from the site, but will
reload the same page from its cache. Not cool, considering the free CAB
1.5 doesn't have this problem...

my two cents...

Oh, and I was pretty disappointed to find out that CAB 2.5 is going to be
available in the next few weeks. I just got 2.0 a week ago...

$ 3.50 Zero Gravity (MicroDeal)
$ 3.50 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly
listed.

7) If you have a problem with the listed price, please remember
that nobody is forcing you to buy from me. I have been in
business since 09/05/93, so I have a good idea how to price
items. My personal philosophy is that something is only worth
what someone is willing to pay for it.

8) Payment must be made in U.S. funds, by either check or money
order, drawn from a U.S. bank branch. Orders from outside the
U.S. are also accepted (also, please check out my want lists,
since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to
correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your
order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address
(this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

to get 115.2KBPS.

: I realize my modem can only go 33,600, so a higher setting
: wouldn't do much good, BUT, if I wanted to network to my PC using

Actually a higher setting will do a lot of good.

All modern modems support data compression, which is claimed to
compress data as small as 1/4 the size of the original data (of course
this depends on the data). This means that the optimum speed for the
serial port would be at least 4x faster than your modem's speed. For a
14k4 modem then means 57.6K, for a 28.8K modem this means 115.2K. If you
have a 33.6K modem you will have to make do with 115.2K.

870. Re: Mint Questions

Newsgroup: comp.sys.atari.st
Date: 1997-07-22 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <75OOCZH@tos.pl.net>
Source record: 119390

Brian Roland (bjr@Edison.EbiCom.Net) wrote:
: 1. How do I change the timezone from dutch or what-ever to CST?

MiNT doesn't seem to have proper support for time zones, but you can set the TZ variable to whatever time zone you want.

: 2. How do I change the character set from ISOblahblahblah to
: standard US ASCII?

I'm not sure what defines the character set.

: 3. How do I add new users...and set them to super-user status if wanted?

Someone recently made an adduser utility to do this for you. I am unsure where you can obtain this. Try looking back over the past month or two in the MiNT list.

Otherwise, you simply have to add the user to /etc/passwd and make them a home directory. If you want them to have superuser status, set them up this way in /etc/passwd.

: 4. What is the best way to set the console resolution?
: Anytime I log into the console without launching an AES,
: it goes into some really blocky 40 column resolution with massive
: letters that get cut in half near the bottom of the screen; sometimes,
: the console "alt F10" is solid black and the monitor clicks when
: swapping consoles (as if there were a resolution not supported by
: my SVGA monitor?). Logging into a tty, it seems to stay in a standard
: 80 column 2 color Falcon mode.

Hmm, this doesn't happen on my TT. Try changing your NVRAM settings so that the resolution is set as you want it by default.

: 5. Is there a way to rename the terminal type to vt52?
: When I telnet into places, they have no listing for vst52 and
: I get bounced to dumb mode and must set it manually to vt52 (when
: possible). Better yet...can I install that ANSI auto folder
: program that is so great, and make the whole thing ANSI/VT100?

Yes, I changed it to VT52 for the same reason. Edit /etc/ttytab.

I am told you can use screen to get VT100 capability, but I have not done this myself.

: 6. Can I set things up so that messages (Such as the pppdialer) are
: sent to a log-type file rather than to my console?

There is a program called "console.ttp" that lets you redirect console output. I think the PPP stuff goes into /var/log/ppp-log or something like that anyway.

: Now back to mint specific questions...

: 1. How can I get Geneva to "properly" launch as the AES?

I had Geneva working once, but I now use N.AES.

: I've also found that Geneva will only load under mint if it's
: set to NP (mintnp.prg) mode.

This means that memory protection is turned off. This should make the system less stable. Perhaps you should contact Dan Wilga about this, or try setting Geneva's memory flags differently. (The AES has to be able to read all other apps' RAM.) Normally it is desirable to have memory protection on if possible (MiNT named mint.prg).

: If I boot geneva under mint using drive C:\path(s), it usually
: can't find anything it needs...no accs loaded, can't find
: resources, etc...

Try:

cd c:/
geneva.prg

(or whatever/wherever geneva is)

: consider something like N_AES if it is as fast as Geneva, and
: allows me to use NeoDesk4 as the shell.

N.AES at least feels much faster than Geneva, but I haven't done any benchmarks. N.AES is also much more standard than Geneva, and I found it to be hugely more stable. I virtually never get a crash under N.AES. I would recommend N.AES highly. Yes you can use Neodesk 4 under Geneva, although I would recommend Thing.

: 2. Might there be a way to bypass the init.prg of kgmd, and boot straight
: into Geneva while obtaining permissions to all the files on the minix
: partition? Wouldn't this save a good bit of memory?

You will be able to access the files, provided that the permissions on each file are set suitably. Also, if you are root you can access all files. If you don't use MiNTOS (i.e. if you don't run init) then you will be root.

It might save some memory, I don't know how much.

If you don't run init, then you will not be using MiNTOS. Your your whole UNIX setup won't work.

: I've noticed that on my 14meg Falcon, my Geneva set-up takes
: less than 1meg under plain TOS, but over 10meg under mint.
: Is that normal?!? Memory comparisons with AES 4.1 are similar

: so I don't think Geneva/NeoDesk is grabbing more memory than
: it normally would. Maybe the other virtual consoles are snagging
: most of that 14meg?

That is not right. I have a very complicated UNIX style MiNT setup on my TT030 with total 8MB RAM. Even with various network server software running and such, it only uses up about 5MB RAM. If I cut things back a bit it would be even less. If it's using 10MB then something is wrong. I'm not sure what though. Use ps to check the memory usage of different programs to see which is the culprit.

: 3. Anyone know of a good "tos in a window" program that supports vt100
: or ANSI so I can open a shell such as tcsh inside my AES and access
: various unix tools from there?

Well I always found VT52 to be perfectly fine, but if you need VT100 perhaps you should try screen. I haven't used this myself, but I am told that it is suitable.

I hope that was helpful.

872. AUCTION: Ultima/Origin/Infocom games

Newsgroup: comp.sys.atari.st
Date: 1997-07-22 00:00:00 UTC
From: bilstein@mail.utexas.edu
Message-ID: <5r1dmn$3ft$3@geraldo.cc.utexas.edu>
Source record: 119392
Cross-posted to: comp.sys.ibm.pc.games.marketplace,rec.games.computer.ultima-dragons,comp.sys.apple2.marketplace,comp.sys.atari.st,comp.sys.cbm,comp.sys.atari.8bit

Welcome to my Ultima/Origin/Infocom auction. I'm getting rid of the last of my classic computer software to make some money for Atari 2600 games and items. If you have any decent Atari 2600 stuff for trade, let me know about it!

Posting to non-marketplace groups will be infrequent, so please e-mail me to get on the update list.

Please read the rules at the bottom. You are accepting the rules by placing a bid.

==========
THE GAMES:
==========

Autoduel (Apple II) w/box, 5.25" disk, ref. card, map <min> $3

HitchHikers Guide to the Galaxy (Atari ST) w/box, button, <min> $1
fluff, brochure, destruct orders, sunglasses, NO DISKS

Leather Goddess of Phobos (IBM PC) Complete <min> $3

Moebius (Apple II) w/box, two 5.25" disks, poster, ref card, <min> $3
book

Plundered Hearts (IBM PC) Complete <min> $3

Ultima IV (Apple II) w/box, two 5.25" disks, reference card, <min> $3
Book of Mystic Wisdom, History of Britannia

Ultima IV (Atari 400/800) w/box, two 5.25" disks, cloth map, <min> $3
The Way of the Avatar, Book of Mystic Wisdom, History of
Britannia, Reference card.

Ultima IV (??) one 5.25" disk only, sides C & D <min> $1

Ultima V (Apple II) w/box, four 5.25" disks, 2 ref cards, <min> $3
Book of Lore, Voyage Diary, catalog

Ultima V (IBM PC) w/box, four 5.25" disks, cloth map, Voyage <min> $3
Diary, Book of Lore, player reference card, quick reference
card, catalog

Ultima: Savage Empire (IBM PC) w/box, map, four 5.25" disks <min> $3

Wishbringer (Apple II) (shrinkwrapped album box) <min> $3

Wishbringer (C64) Complete <min> $3

Zork II (Atari ST) Complete <min> $3

RULEZ**********

1. Auction will last until July 31st, 10:00pm Central time. It will
then proceed to a once-twice-sold format, with the status changing
every 24 hours when no new bid is received.
2. Minimum bid raise is $1.
3. Conditional bids are accepted.
4. I will e-mail updates daily, as well as updating Newsgroups (some
more often than others).
5. US and Canadian orders only for this auction.
6. Payment must be in US funds, check or Money Order. I may hold a
check up to 10 days, a Money Order will get it shipped in 1-2 days
of receipt of payment.
7. If you would like to get on the update list without yet bidding,
just ask.
8. If you would like to be removed from the update list at any time,
just ask.
9. Buyer pays all shipping, to be determined at the end of the auction.
It will probably be $3 for the first two items, plus .75 per additional
item.
10. References provided on request.
11. If you would like to use an alias, please let me know.
12. I am not an expert on these items, so please ask if something is not clear.
No items are implied, if it isn't listed, it isn't there.

873. Discovery Cart

Steve, this is strictly dependent upon your CAB.OVL version.
Some versions handle this better than others. 1.25 does it right,
if you first define your SMTP server in Server/Client dialog.

>Except for one major snag (which I believe has been mentioned here before:
>if you try to get page of selections from any search engine like Deja-News
>or AltaVista, CAB will not request the next page from the site, but will
>reload the same page from its cache. Not cool, considering the free CAB
>1.5 doesn't have this problem...

Again, this is the CAB.OVL's fault. What version do you have?

>Oh, and I was pretty disappointed to find out that CAB 2.5 is going to be
>available in the next few weeks. I just got 2.0 a week ago...

There should be an easy upgrade package available. Given your
recent purchase, this should be easy to justify with ASH that
you shouldn't have to pay extra for it either.

875. Hardware details of parallel port?

Newsgroup: comp.sys.atari.st
Date: 1997-07-22 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <KBPOCSE@tos.pl.net>
Source record: 119395
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

It recently occured to me that the parallel port could be useful for use as 8, or maybe 10 (counting the strobe and busy lines) digital outputs. I guess that if the port is bidirectional, it could also be used to input digital data in a similar manner.

However, I need to know how to turn individual pins on or off, and make them _stay_ that way. If the port cannot do this, perhaps I could use a buffer IC, with the enable line connected to the strobe pin or something like this. Not being familiar with the workings of the parallel port, however, I would be unable to do this accurately.

So can anyone explain exactly how this port does work for normal data output (from the hardware point of view), and whether it is possible to cause pins to stay on or off for extended periods?

Also, can the port act as an input, and how would I cause it to act in this way?

Your assistance would be appreciated.

: maximum for the Falcon is still 14 megs.

Well...if money isn't a major issue for you...
There are "supposedly" a few options to add TT RAM to your Falcon.
I've read of an FX card that supports it, and of course there is
the AfterBurner card. The AB040 definately exists, and they are taking
orders for them...I'm not sure how long it'd take to actually get one
though, and they are pretty expensive. I could be wrong, but I'm pretty
sure it supports TT RAM well over your max 14meg ST ram.

I can't wait to get my hands on an AB040, but it's gonna be a while before
I can shell out that kind of cash :/

Uwe Seimet (us@ooc.de) wrote:

: HDDRUTIL requests the number of sectors from the IDE drive. If
: nevertheless the drive's capacity is displayed wrong in the HDDRUTIL
: partitioning dialog box there might be something wrong with your drive.

I've seen a couple SCSI drives have wrong information about the drive.
Seems I had an ST41200N that showed, instead of the number of heads or
sectors, an N/A. The fault was bad electronics. I swapped out a board from
a good ST41200N onto the other one, and it worked fine. It could be that
the drive itself may be bad. As it turns out, I have 4 bad ST41200N
electronics boards and two bad mechs, after I bought some drives for
checking and repairing. He may wish to return the drive for a new one.

Now to make clocks out of dem mechs... [Dem Bones plays in background]

That is true, but most servers are 8-bit nowadays, AFAIK.
And MIME-QP hasn't got much support either.

A heck of a lot of people... ST and Falcon owners.. as well as IBM
users.. have graphics turned off.. its far quicker.. Personally I keep
them on as I like to see whats there.. But I talk to a lot that turn
them off..

>Go ahead if you want to help them, but I'm sure with only one MB most are gonna
>be disappointed, and drop the matter soon again.

Graphics or no graphics a lot of people are dissapointed with the net
anyway.. It doesn't alter the facts though does it?, I already agreed
that a HD and more memory is better.. thats pretty obvious to anyone..
the point was it can be done.. and people shouldnt tell fellow
ATARIans that it can't IMHO because it is Untrue, Unhelpfull and not
in keeping with the ATARI spirit.....<smile>

BTW get an older version of CAB and you CAN see graphics one a one
meg floppy setup :)

Message-ID: <33D477A0.29955A75@sunderland.ac.uk>
Source record: 119406

Hi everyone (especially Falcon owners),

I have the opportunity to buy a used Falcon. I had a brief look at it yesterday and ran GemBench v4.02 on it - I booted from the floppy with GemBench on it and ran it in ST High compatability mode (IIRC) on a SVGA monitor. I was very surprised to find that the CPU benchmark was under 100% (about 70 something). When compared to a standard ST it was only 171% faster.

Is this normal, what settings should you set in GemBench to get a 100% score for a plain vanilla Falcon (TOS 4.04)? I was always under the assumption that a Falcon would be about three times faster than an ST. Is it possible for a Falcon to go faulty in this way?

Also, could anyone advice me what to look out for when checking the Falcon over. Are there any points of failure, or am I to assume that if it boots it is OK?

I have to make a decision on the machine on Friday, so any replies either by email or to this newsgroup would be gratefully received before Thursday.

Thanks alot,

Michael

The FX card will not give you more than 14 mb ram. There was suppose to
be a driver for extendet ram, but it never turn up. Don't know what happen
to the programmer.

cheers

The last one to crash CAB 2.0a is www.POPULUS.net, that gives me a runtime
error every time, it didn't happen when I use CAB 1.5, strange or what?

Also CityMaps give some trouble, I can't zoom in or out, and if I jump
between 2 different maps a couple of times I end up with a wrong map.
But this may not be CAB it is, perhaps from the server.

cheers

Yes, there was one called STen that was released by ST Revolution, a
Swedish Atari usergroup. And there is still one called Atarimagasinet
that is released by the Swedish Atari Club. And there is offcourse our
own superb Atari Computing swedish supplement :-) But that is
offcourse included to the subscribers of Atari Computing in Sweden.

Branko Badrljica , <brankob@st-el.si> a crit :
Hello everyone,

I wonder if anyone knows anything about Platon PCB CAD program. I've saw
demo prg. a few years ago and it was excellent.

My father has it, the version 2 in monochrom. Seems to be well, but I
didn't used it myself. I can ask him more precise questions and his opinion,
the next time I go back home.

I couldn't afford full version then, and now I would like to know more
about latest version, like version number, price, capabilities etc.

Last version must be the 3, working in color and extened
resolutions. Expensive : about 3000 F (don't know what it makes in $).

>characters when logging into my isp with ConNect. Is that normal?

I have recently been playing with Serial 2 on the TT, which uses the
SCC chip just as in the Falc.

I, too, have found that 115k2 can give intermittent data errors. It
often seems to depend on what application is using the port.

I have just turned the spped down to 57k6 and will see how this works
over the next few days.

> I realize my modem can only go 33,600, so a higher setting
>wouldn't do much good, BUT, if I wanted to network to my PC using
>a null modem, I'd like to go as fast as possible...so again.
>What is the fastest Baud rate a stock Falcon can do?

Yes. That's the speed down the telecom wires. There's not a lot you
can do about that.

However, if your modem operates with data compression (most likely)
then it makes sense to have the computer->modem speed faster than the
modem->phone line. The usual ratios achieved with data compression are
between 2 and 3 so, in theory, your DTE rate should be between 67,200
and 100,800 in order to keep up. The nearest practical rates are 57k6
and 115k2.

Because a lot will depend on the modem (or the serial port on a null
modem connection) the best you can do is to suck it and see. As I say,
I am coming to believe that my set up will tolerate 57k6 without
errors.

I found some time ago that some PCs simply won't read twisted disks. The
only solution is to reformat the disks.

If you have NeoDesk, you can actually copy (with format) a disk to itself.
Just make sure you set the default formatting type to "None" (neither Fast
11 nor Twister) first.

Cross-posted to: comp.sys.atari.st,demon.ip.support.atari

POPwatch the POP3 mail tool for STiK is now at version 2.10 and is
available
from my web site - http://www.the-gap.demon.co.uk/

This version features an awful lot of changes from v1.00 and v2.00 such
as:

Ability to attach sound samples to specific POPwatch events.

Much improved stability under AES4.1 and MiNT.

Auto checking now also works under STiNG and GlueSTiK.

Various other bug fixes and enhancements.
This version is still FREEWARE too.

Please try it, and please, please, let me know what you think of it!!

Regards, Gary

Or I live in another world or you are using another tipe of internet!!!
Progressive JPEG? or do you mean PNG (Portable Network Graphics)?. PNG
is full supported by CAB via a module (look in IBP - a.k.a. CNAM - for
it)!!!!.

> >It is not just Prog JPGs that it has difficulty with. Large JPG files
> >(200K+) are ignored too. This is not acceptable as more and more
> large and

I don't think of so large Jpeg files. If it will be the norm, we will
need modems of 500,000 bauds only to have decent speeds. Anyway, I don't
have any problems loading ofline Jpegs of half meg with my cab 2.0 demo.
Alex Clauss chage this in the new version?.

> >
> >It also needs a built-in mailer and newsgroup reader aka Netscape.

Keep CAB as it!!!. It's a pain sometimes to manage the latest versions
of Netscape for its integration. Keep programs separate!!!!

> >single floppy machine (STf) try getting it to run external modules

bjr@Edison.EbiCom.Net (Brian Roland) said:-

>I'm wondering what the fastest reliable setting for modem2 on a Falcon
>is.

It depends of the screen resolution... In 640*480*2 57600 bps is very reliable, 115200 not really. In 640*480*256 57600 bps is no more really reliable, 115200 is unusable. It depends also of the Falcon, I know some with different error rate. And also of the system used, I have much more error with MiNT than with plain TOS. The worst is with MultiTOS (MiNT + AES 4.1)... if only someone could explain me how AES increases serial error rate... And once someone said you have no more problems with Magic. It depends also if you move the mouse or not.

>The higher setting gets a lot of garbage characters when logging into my

Garbage chars? Strange, as here I can see serial errors as lost characters. Do you use HSmodem?

>I realize my modem can only go 33,600, so a higher setting wouldn't do
>much good

False, a higher setting is necessary.

Bye! Bruno.

Iggy Drougge <optimus@canit.se> wrote:
%I have a question regarding the ST's screen resolutions and scan
%rates.
%I have an Amiga 1438S multisync (or bisync) monitor, which kan handle
%both the usual 15 KHz RGB signal and 31 KHz VGA signals. Would this be
%able to dispplay bth ST Low, Medium and High resolutions, providing a
%suitable adapter is used?
%What are the horizontal and vertical frequencies of ST High?

I seem to recall that ST-High is 35.7 KHz. It is higher than the expected
31.25 KHz because in addition to resolution being doubled, the refresh rate
increases from 60 Hz to 70 Hz.

> something close to that). The higher setting gets a lot of garbage
> characters when logging into my isp with ConNect. Is that normal?

Seems you're not using any port fix program, like HSMODEM. With HSMODEM you
should be able to go up to 115 kbps reliably. The port itself works up to
230 kbps, but the port needs to be polled to exploit that, which is not done
by CoNnect/HSMODEM.

> I realize my modem can only go 33,600, so a higher setting
> wouldn't do much good, BUT, if I wanted to network to my PC using

It would, as the modem would almost certainly support compression algorithms,
like V42.bis, so you should use 57600 bps at least anyway.

Cheers Peter

> as a multi-tasking environment?

Yes, a PPP software is part of the CAB 2.5 package.

You'll need a preemtive multitasking OS for the PPP software. That means
you'll need MagiC (Atari, PC or Mac), N.AES and Mint, MultiTOS. Probably
Geneva with(!) Mint will also work.

Out of the ether, the following was mentioned by Sysop@fortress.org.uk...:

S> Not possible paul, Each cdrom is infact a seperate device with it's
S> own scsi
Kev,

Paul's CDROM uses one SCSI ID with multiple LUN's to identify each actual
disk, so in reality it only uses one actual SCSI ID.

Rather his problem is that Extendos places each disk in its own
logical drive, rather than allowing him to access each disk as a
folder on one logical drive.

He's using all drives upto and including Z!

S> you do this. The same way that you can't partition two hard
S> drives and have the space all on the 'c' drive.
You can under NT (but that's another story! ;-)

Ciao!

Unfortunately you can only connect a Zip to the ST if it's SCSI and
you have a SCSI to ATARI-DMA converter like the ones from ICD, and others.

Good luck!

Robert Goodwin wrote:

> I've seen a couple SCSI drives have wrong information about the drive.

Note that the information about heads, cylinders and sectors per track
provided by a SCSI drive have nothing to do with the actual drive
geometry. Todays drives have variable sector sizes and the geometry
simply gives a hint for programs that require geometry information. The
capacity of SCSI drives is provided by the SCSI command READ CAPACITY.
Determining the drive capacity in another way is wrong.

> info again... :)

No, you're absolutely right. Some (but not all) IDE drives are damaged
when they are formatted. For example, they get considerably slower after
formatting because information on the servo tracks is destroyed and not
recreated with formatting.
Of course such a behaviour has to be seen as a firmware bug. But it
seems as if some IDE drive vendors are not interested in fixing this.
With SCSI drives there is no such problem.

Ah, thanx Michael for the very kind compliment. :-) I hope you
mentioned how much work I did while there... ;-))

It is for the Atari section and what I was doing for the Atari
community that made the job that much more enjoyable.

Unfortunately, I think that Atari users are in a minority when it
comes to policy making etc. The 'excuse' I think that will be made -
as was always the case by some of the elders at the university - will
be that the PC is the main machine used in Education - the market that
HENSA exists for. The Mac is secondary to that and all other machines
come below these. The Archimedes might be a slight champion because
the systems manager of micros.hensa is an archimedes fan. The Amiga
and Atari are prejudicely known as Games machines with no serious
software support.

I was always up against a constant battle with trying to keep the
Atari section going - even though I knew lots of people at University
that had and used Ataris daily for their work...

Oh well, I'd like to see what the outcome of the comments are...

With the Afterburner040 you can have 14MB ST-RAM and 64MB Fast-RAM.
You might be able to have 128MB with the newer boards but it's not
confirmed.

> I can't wait to get my hands on an AB040, but it's gonna be a while before

From: Alan Swanson <emdu02@holyrood.ed.ac.uk>
Message-ID: <33D61225.1E06@holyrood.ed.ac.uk>
Source record: 119306

Hi, I'm running Magic 5.03 (soon to be 5.11) on my STE and everything is running very nicely. However when testing it seems that the blitter is turned off. Is there anyway to switch it on? I can't see anything in the Magxdesk anywhere nor in the magx.inf file.

Any suggestions?

I'm also having difficulty understanding how to change the icons for Magxdesk. The instructions in the manual are not exactly comprehensive. Basically how do I assign a new icon to, say *.wav or *.avr (I think this might be better in 5.11?).

Thanks.

ALaN.

: as a multi-tasking environment?

According to the post from Alexander, Geneva will work but only if you
have it running with MiNT. The PPP module apparently requires preemptive
multi-tasking, not cooperative multi-tasking.

When my copy comes (remember, I'm at the tail end of the pipeline for
this, living in the US), I plan to test it all out, but will probably
stick with STiK or STING. STiK works very solidly for me; I'm very happy
with it. I will switch to STiNG when it comes out with PPP, unless STiK
comes out with it first.

Magnus Kollberg (emwoll@emw.ericsson.se) wrote:
: Steve Scott <buskers@melbourne.dialix.com.au> writes:
:
: > appreciate any parting words from users of Afterburner040 / Nemesis
:
: Well I have got a Afterburner040 and I just love it. It does what I
: want it to and it gives me the speed I want as well. If you are after
: the fastest accelerator available for the Falcon there is only one.
: Okey it's a bit expensive but for me it was worth it...

I considered the Afterburner, but shied away from the price and got the Nemesis instead. I'm very happy with it as well. Everything runs fine, now 150% of original speed, which is at least that bit necessary. I used to run 16 color mode mostly because I found window redraws at 256 too slow. Now 256 is easily as fast as 16 color was. And I now have True Color VGA, even without Videlity (which I plan to buy as soon as it is shipped out here). One thing to note, higher resolutions require more RAM. I finally am feeling pinched by my 4 megs. Running NVDI, Geneva, Neodesk, STiK, and CAB at 256 colors only leaves about 1.2 megs free, and at True Color I have only about 600K (I think I had MiNT running too when I did these test, but the ratio is the important thing). Lots of JPEGS wont display anymore unless I kill NeoDesk (or MiNT) or something.

Nemesis also improves some other things: the DMA (for Hard Drives, etc.) is often flakey on Falcons and should now be rock solid (I don't use this so cannot test). Also, the fan has been moved from the front of the keyboard, where it blows hot air onto the desk and eventually out at the user, to the top rear, where it can actually vent better and vents away from the user (very nice during our hot summers).

In addition to its higher cost, the Afterburner would have cost me the price of a new case. On the other hand, while I got a 150% speed increase, for six times what I paid (approximate cost of Afterburner and Mark X case) I could have gotten about a six times speed increase if I had gone that way.

But you can't lose, because these things work smoothly together (so Titan says). I can get the Afterburner later and end up with a total of nearly a nine times speed improvement. Similarly, Magnus can get the Nemesis later and add half again more throughput to his bird.

I originally got on the net using a 1MB 1040ST with 2 floppys and NO
hard drive and I wasn't dissapointed, although I turned the images off.
Even with the hard drive now I still turn the images off - its just a
lot faster and I don't care about the images anyway. Most people have
basic systems that are fine to get on the net. They can upgrade RAM
later.

The socket is soldered onto the PCB. I hope the PCB itself is not
damaged.

Yes, you could easily swap the parts. Use some sort of desoldering
tool (braid or sucker) as there are many pins to clear before you can
take it out.

You may not need to raid the other machines. These PCB plugs are quite
easy to find - in the UK you can get them at Maplin's.

(http://www.sunlink.net/~quantum/)

In case you haven't visited, Atari-Internet is a new web page in the
United States devoted to Atari Internet programs, specializing mainly
in STiK and STiNG. The goal is to keep *the most* up-to-date page for
Internet software anywhere.
To better serve you, here's a list of the software it currently
holds:

o STiK v1.12 o AntMail v0.79
o STiNG v1.04 o Newsie 0.79
o Telnet v2.01 o CheckMail 1.10
o FracIrc 1.10 o Atari-Irc v0.73 +sounds
o A-Ftp 1.2b o Finger v1.3
o Forcast 0.40 o Cab v1.5 (freeware)
o Cab v2.0 (demo) o Cab OVL v1.25 +DSP Jpeg Ovl
o PopWatch v2.1 o Cab OVL for MintNet 1.81
o WebSpace 1.70f o + More!

We also have news and links about the brand new Cab 2.5 from ASH. So
for the most current list of Atari Internet software on the Net, go right
to the source: The Atari-Internet.

http://www.sunlink.net/~quantum/index.html

P.S.> To see just how often we're updated, hit history.html at the same
address.

HOW do you achieve that without replacing the processor?
I know you can get more memory with rebuilds like PAK.
But you get COMPATIBILITY problems.
I know I don't have that option
>
>S> Then some is used for ACC:s, HS-modem alternative desktop and MiNT.

If modern software means using a lot of memory, then we all have to
throw away our ST:s.
(Or throwing away expensive hardware tied software.)

:
: > appreciate any parting words from users of Afterburner040 / Nemesis /
:
: Well I have got a Afterburner040 and I just love it. It does what I want
: it to and it gives me the speed I want as well. If you are after the
: fastest accelerator available for the Falcon there is only one. Okey it's
: a bit expensive but for me it was worth it...

I considered the Afterburner, but shied away from the price and got the Nemesis instead. I'm very happy with it as well. Everything runs fine, now 150% of original speed, which is at least that bit necessary. I used to run 16 color mode mostly because I found window redraws at 256 too slow. Now 256 is easily as fast as 16 color was. And I now have True Color VGA, even without Videlity (which I plan to buy as soon as it is shipped out here). One thing to note, higher resolutions require more RAM. I finally am feeling pinched by my 4 megs. Running NVDI, Geneva, Neodesk, STiK, and CAB at 256 colors only leaves about 1.2 megs free, and at True Color I have only about 600K (I think I had MiNT running too when I did these test, but the ratio is the important thing). Lots of JPEGS wont display anymore unless I kill NeoDesk (or MiNT) or something.

Nemesis also improves some other things: the DMA (for Hard Drives, etc.) is often flakey on Falcons and should now be rock solid (I don't use this so cannot test). Also, the fan has been moved from the front of the keyboard, where it blows hot air onto the desk and eventually out at the user, to the top rear, where it can actually vent better and vents away from the user (very nice during our hot summers).

In addition to its higher cost, the Afterburner would have cost me the price of a new case as well. On the other hand, while I got a 150% speed increase, for six times what I paid (approximate cost of Afterburner and Mark X case) I could have gotten about a six times speed increase if I had gone that way.

But you can't lose, because these things work smoothly together (so Titan says). I can get the Afterburner later and end up with a total of nearly a nine times speed improvement. Similarly, Magnus can get the Nemesis later and add half again more throughput to his bird.

I recall having read about some faulty GAL in many machines, that would
cause this sort of error. Have you checked for this in the HSMODEM docs ?

Hmmm, seems I've been talking to a different sort of people ? They used to
be ecstatic when it came to nice pics, bored with plain text. I guess also
there must be a reason many web publishers nowadays build their whole page
by using only graphics (which I dislike very much, try to view such a page
using Lynx, for instance).

This claim is of course bullshit, as you pointed out it depends on the
data, and I have yet to encounter the sort of data that will be compressed
to only 25 % of original size. All the data you deal with normally will get
compressed by factor 2 at most, let alone zipped or lharced archives which
of course won't be compressed even a single percent.

> serial port would be at least 4x faster than your modem's speed. For a
> 14k4 modem then means 57.6K, for a 28.8K modem this means 115.2K. If you
> have a 33.6K modem you will have to make do with 115.2K.

It is more realistic to do the calculation with a factor of 2, which means
hooking up a 28.8 kbps modem to a 57600 kbps serial line is virtually no
loss in terms of speed, and I still won't call it stupid to do the same with
a 33.6 kbps modem (but sure in that case 115 kbps would be desirable ;-)).

Damn,

I have an IPC MCD-1020 7 CD Rom Library that I bought from MacMall for
$149.00 new about a year ago. It sits next to my Falcon daisy chained
to my Archive DAT tape streamer and my HP Sure Store waiting for the day
that it could be utilized fully.

I would love to have a program for the Falcon that utilizes the JagPad
and allows the user to play CD-Audio music allowing them to select DSP
sound effects and allow them to have a light synth similar to the
Jaguar. Perhaps it can come on as a Screen Saver too. I hate flipping
CDs and CD Roms. That's why I got the MCD-1020.

Hi,

Here's some Atari ST stuff that I'm not using
anymore. Those are my asking prices. I'm open to offers.
Buyer pays shipping. E-Mail me or call me at
216-729-0761 evenings EST. I am also open to trade offers.
E-mail me your list.

HARDWARE

Atari Mega 1 Computer. This was not released in the U.S.
Same as a Mega 2 or Mega 4 execpt it has 1 Meg of RAM.
German TOS 1.2, German Keyboard. Has U.S. 110v power supply
installed. With German manual and mouse. $100.00

Atari SC1224 Color Monitor. Unit is in perfect working order.
Comes with power cable. $65.00

Spectre GCR by Gadgets by Small. This is the Apple Macintosh emulator
for the Atari ST/STe/TT/Falcon computers. Includes cartridge, disks,
box, and an extra disk of misc ST utils. $65.00

Supra 2400 baud external modem. No power supply. $4.00

Fast Fax by Michtron. This is the original fax hardware/software
for the Atari computers. Works with ST 520 to Falcon. This is a
special Michtron 9600 Send/Receive Fax Modem with software. The
software is very efficient, powerfull, and simple. Send, receive,
view, log, and print, faxes. has drivers for popular printers and the
SLM804/SLM605. Use a spare 520 or 1040 as a stand alone fax machine.
Comes with special fax modem, diskettes, and manual. $45.00

GAMES

Imperium Game manual and registration card from Electronic Arts.
I no longer have the disks or box but for someone who needs
the docs here you go. $1.00

Conquest of Camelot by Sierra. Complete with box, docs, and disks $10.00

Gold Rush by Sierra. Complete with box, docs, and disks $10.00

S.D.I. by Mindscape. Complete with box, docs, and disks. $10.00

Plan 9 From Outer Space by Gremlin. Complete with box,
docs, and disks. $15.00

MISC SOFTWARE

New Pagestream 2.2 SE by Softlogic. The classic DTP for the
Atari platform. This is the newest release for the Atari.
Obviously comes with box, docs, and diskettes. Also comes
with the older pre SE 3 inch thick Hard case binder set of
complete documentation, not the watered down SE stuff. $35.00

DEGAS by Batteries Included. The original Graphics Design
program for the ST. Includes Book and disk. $10.00

REAL BASIC by CCL. A full featured BASIC language. Nice
features include an inline Assembler and demo programs.
Capable of MENUS and MIDI programmming. Includes manual
and disk. $10.00

ST Control by Trio Engineering. A BASIC like language that
is closer to using normal language to program. Example
"Draw picture with Neochrome" Includes box and diskette
no manual. $5.00

ULTRASCRIPT by Imagen. Full Postscript emulator for the Atari
ST. Works awesome with a SLM804 and other dot, ink jet, and
laser printers including the popular Epson and HP series.
Comes with 27 typefaces plus an upgrade font set including
35 more typefaces! Wordperfect for the ST has postscript
support. With Ultrascript you can get perfect scalable font
printouts and create Postscript files. $35.00

BOOKS $5.00 each unless noted

Compute's Technical Reference Guide to Atari ST TOS Vol 3.
Includes fully commented C and machine language examples. $5.00
Thunder! The Writers Assistant manual. $3.00

MAGAZINES

I have a large selection of mostly 80's and early 90's Video Game and
Computer Magazines, Books, and Newsletters for various systems.
Please E-mail me for a current listing.

Thanks...I was hoping I could use it and Imagecopy together to convert large progressive JPEGs to another format. That combo works well, but is limited by what fits in my 768x480 GEM window.

Hmmm...maybe I could use a large virtual screen.....

Wifes expecting and am trying to make some room for our
first child, (loosing my computer room), so clearing out some of my
Atari computer stuff...

Prices firm, but will consider all reasonable offers
Conbinations perfered.

Terms: Money order or personnel checks after being held till clearing.
Shipping charges additional.

Questions/offers E-mail to mike.harvey@worldnet.att.net
or call evenings PST to (619) 575-1358
Shipping from: San Diego CA
- -

Atari TT 2 megs ST ram/ 4 megs TT ram
400+ meg HD (Upgraded HD on Atari Warehouse clearance TT.)
$300.00

Cannon IX-12 with Navarone adaptor for ST
Grayscale sheetfed scanner
Works Great with Atari Laser as a copier also
Can include the scanner driver for ST Fax if needed.
$80.00 (Note: this is very heavy, shipping will be expensive)

Golden Image hand scanner with Migraph Touchup
$35.00

Future GTS-100X 3.5 inch double sided floppy drive for a ST/Mega
Much better built then Atari's SF-314
$30.00

Chinon 1X SCSI CD-ROM drive mech (internal type/no cases)
I purchased a whole dealers lot of these and need
to sell off a few. Works with Extendos as confirmed by the
programmer. With 1 caddy, $9.00 each (4 available)

Calamus SL
Purchased used, but I desided I just don't have
the time to learn this powerful program and will stick
with Pagestream. $50.00

>info again... :)

You may be thinking of low-level formatting, which isn't suitable for
IDE drives, and many are automatically protected from low-level
formatting.
A usual formatting is however required, so that the drive gets a file
system.

No, I don't. And this exactly is the reason why I don't support
formatting IDE drives with my software. You can never know all the types
(especially upcoming drives) that are affected. So I chose not to have a
format option for IDE drives at all in order to be absolutely sure no
user can damage his drive by using my software.

I removed the monitor connector (in good condition) when I installed my ST
into a tower case.

It can be done, but you HAVE to be very good at soldering work.

You are going to be removing two connectors, & installing one into the
other ST, there is a possibility that you might break circuit traces.

It might be better to get a new connector (Maplin in the UK, Best
Electronics in the USA) & try to cut as much of the damaged connector off
before you de-solder the pins.

A job for an experienced person.

: >it)!!!!.
: There is something called Progressive JPEG, though I don't know what
: it offers over the usual JPEG. Was it non-lossy compression?

I may be wrong..but my understanding is this:
Progressive JPEG format is similar to interlaced gif. This means
a program that supports it can display the graphic as it uncompresses it,
and you get a fade in kind of affect, where a normal jpged won't be
displayed untill it is full decompressed. It also might be that
Progressive JPEG supports the ability to pack several images into the
same file...like gif...which can lead to animated jpegs with the right
software and fast enough hard-ware.
```

Yes. The main advantage is, that Programms van start decompression and display
of the picture while it is downloaded.

: It also might be that
: Progressive JPEG supports the ability to pack several images into the

No. this kind of JPEG is called Motion JPG. It is similar to MPEG with the
advantage that every frame is accessable directly. MPEG can produces smaller
and faster files with the same quality.

```
b > : There is something called Progressive JPEG, though I don't
b > know what : it offers over the usual JPEG. Was it non-lossy
b > compression?

It sends the image as a series of (very) lossy images, so that one
can get an idea of what the image looks like after the first batch,
and each successive batch adds more detail.

There are two varieties: "spectral selection progressive encoding"
and "successive approximation progressive encoding." One
progressivley adds more terms to the DCT (discrete cosine
transform), the other adds bits to every term.

There are actually 29 different formats supported by the JPEG
standard. They are all based on the DCT, which acts over the entire
image at once. One must perform an inverse DCT to get the image
back (which is what uses up all the RAM - particularly if you store
the intermediate products at FPU precision).

I have a Mega STe 2 (stock CPU, 2Mb, TOS 1.2) for sale for $125 +
shipping. Cosmetically, it's in very good shape (no yellowing). The only
oddity is that the keyboard cable is a replacement, not the original Atari
one.

Actually, I wish they supported Geneva directly, instead of the Geneva MiNT combination, so I'm a bit peeved myself.

Since it has been demonstrated that a solid TCP/IP stack can work, even on a single TOS system, I wonder why this particular product requires a pre-emptive multitasking system.

Now, I have not tested this product, so I speak not from experience but simply based on information I've read in this newsgroup. But as it came from the author of CAB, I suspect it is pretty accurate.

By the way, has anybody heard any progress reports on the other TCP/IP solutions that have been in the works? I'm thinking specifically of WEN Suite (release 1.70K seems to still be the latest version of this, but I heard from one of the programmers that 2.0 was almost ready, and that was many weeks ago, but he doesn't answer my mail now), and Termite TCP (Oregon Research still list June as the release date for this product for the Atari on their web page, although I heard in this newsgroup that that date would be delayed because of illness, no new date has been offered).

Well then, you might want to update AFTP to 1.3b, and update WEN Suite to 1.70k.

Its a large list of software and hard to keep track of what the latest version numbers are. I've been trying to maintain a similar page at the Yolo Atari Club web site (http://virtual-markets.net/vme/yac/).

If you mean the CD-ROM AtariMiNT then you can ordered it from
Delta labs media
Osterfelderstrasse 16
42103 Wuppertal
Germany
Tel: 0202 3702317
Fax: 0202 3702319
email: deltalabs@usa.net
http://www.deltalabs.com

The CD-ROM is available for 59,-DM (+p&p normally 15,-DM). You must
pay in advance. AFAIK they accept EU-cheques.
According to the advertisement the CD-ROM contains everything you
need to use MiNT including MiNTnet and lots of GNU-applications for a
total of 330 mb.

Hope this helps

..and there's my point! I have not wished to upgrade my ST purely for www
browsing as it can't compete with a full-blown Pentium setup now, and hardly
worth the investment.

I do have 4Mb but the lack of a HD should not be a problem for displaying
large JPGs - I don't think TOS allows disk swaps!!

Yeah, I also could try Magic (I have copies of both 5.3 and NVDI 4) but do
not see the point without a HD. And if so, I should really get the HDD flopp
chip and boosted serial chip and... I'm still only stuck with the SM124
or Low res monitor output..!

I will however, try reconfiguring my memory and see if that helps...

....just tried it. Sorry, same problem...

Falcon TOS (TOS 4.x) mainly includes the Falcons hardware features into the
OS, this means better graphics, better sound, DSP support, etc...

Multitasking can be acheived with replacement OS like MiNT and MultiTOS or
MagiC.

I don't use Magic, but someone said me once the interrupt routines are
better designed than in TOS, and you have much less serial problems with
it.

OTOH as some protocols can correct errors, it's always possible you
have huge serial (or modem) errors without seeing them at all... just with
slower transfer. I know that, I once had the experience! I misconfigured
my modem (line level in data mode too high) and had massive error rate...
but they were totally hidden by V42 protocol, I was just having a really
slow data rate, something like 50 CPS instead of the usual 3200 CPS. It
took me the day to find the error. Of course V42 is for modem and not
serial, but PPP or IP (or even zmodem) protocols have also error
correction.

BTW, you must use HSmodem with Magic? I thought the Magic routines
didn't need it?

Bye! Bruno.

Do you mean to convert the image by screen snapshooting?
That's a really bad idea, unless you have a *real* sufficient
TrueColor (>= 24 bit) resolution. Falcon-"TC" mode, for example,
is *not* real TrueColor, it's only HighColor (15/16 Bit)!

And if you only wanted a 'regular' JPEG output, your best bet is
to use the 'jpegtran' utility. Any other solution (using a standard
graphics program with p-JPEG support even in real TC mode!) would
require to recompress the JPEG file, thus introducing additional data
loss!!
'jpegtran' avoids this extra decompress/recompress cycle by performing
its operations on the coded image (DCT coefficient) data!
As said, 'jpegtran' is part of the free software distribution from
the Independent JPEG Group (current version 6a required - 5 or below
don't have it!). It runs without problem on my Falcon.
If you were a registered 1stGuide user, you could ask me to send you
the compiled binary. It's a command-line program (JPEGTRAN.TTP) and
relatively easy to use.

For the next official IJG release I will care to provide public Atari
binaries, because I'm now responsible for this port.

Maybe that there will soon be a new official release from IJG.
Tom Lane, organizer Independent JPEG Group, planned to prepare a
major update according to recent JPEG standard developments (i.e.
a new standard file format called SPIFF with enhanced capabilities).
But just currently Tom has decided to incorporate my lossless image
transformation features into the source base and possibly make it
available as an intermediate 6b or so release, because more and
more people ask for the features :-).

You can look at my initial source code under
http://www.esc.de/homes/guivol/jpegtran/jpegtran.c
which can be used simply by replacing the 'jpegtran.c' file from
the original distribution and then recompiling.
However, currently Tom and I work on a 'proper' incorporation into
the code base.
We are almost done, there are only some minor points to fix yet...

BTW, you can also use my online JPEG-LAB at
http://www.reporter.de/jpeg-lab.html
It can read p-JPEG files and will return a 'regular' JPEG anyway at
the moment, thus it will do your conversion appropriately :-).

Regards,
Guido

1000. Looking for 600dpi 36" wide printing company (USA)

Greetings....

In town here in Florida there are companies that will print your TIF, GIF and such at 300dpi, 36" wide and how ever long you want. They do it with some kind of HP printer. I'm looking for someone that can do the same kind of work at 600 dpi. Anybody know who can do this for me?

Source record: 119371

I'm trying out a new ISP. It is a Windows NT server. They use
an HTML proxy. CAB now works better than ever. I have yet to
find a domain I can not go to. News and mail work fine as well.
I am having problems with FTP. It is not specific to Newsie or
AFTP as they both report domain resolve error, cannot resolve.
The ISP told me that I need to use their gateway.
How do I configure STiK with the gateway number so Newsie and
other apps will recognize it?

Thanks,
Mike

If you wan't me to read any response from you, do not respond here, Direct all responses in E-Mail to: bensmith@teleport.com

I've added more Items to my Catalogs, such as several large boxes full of Atari ST Software. All of them Complete in Boxes with Documentation. Some are still UNOPENED and SHRINKWRAPPED. As well as an Atari Laser Printer. For the Classic Atari 8 Bit Line Added Hardware was a U.S. Doubler Disk Drive and Lots of 8 Bit Disk SoftWare for $5 each.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of Shadow Software. Older Technology made with a lesser chance of Planned Obsolescence. Built like Tanks. The Shadow tells me each one worked before they were taken off their Computers. Each one, $25, as is. Model numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may find something you've been looking for. Something you might want. Even Something you may of Forgot! At BSC's Web Site you can View, Capture & even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or Feel free to Request catalogs through E-Mail. Really, it's no inconvenience. All I ask is that you specify Atari 8 Bit, Atari ST or both. Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I will get back to you after the weekend. Please let me know if I can't attach files to your E-Mail. Please Direct any and all Replies Through E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer Platform. Also from The Shadow of Shadow Software (my Boss) a File called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP.

This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. The Atari LAN port will run at the exact same speeds as the Mac LocalTalk port.
The real question is what protocol will you run over this port... I suppose
the best solution would be to run PPP, but I'd guess that LocalTalk would be
better on the Mac side. Which would require a LocalTalk driver and AppleTalk
stack on the Atari side.

Generally the Mac comes with PostScript printing support, period. If you have
GhostScript on the Atari, and a driver for the Atari Laser printer, you can
probably spool Mac files to it.

>
> They are certanly not. There is a card out now that gives your ST, STE
> 32MB RAM !

Are you sure here ? I find this highly unlikely. The ST's or STE's CPU
is a 68000 which can't handle more than 16 MB without bank switching (it's
basically got only 24 address lines), and there is no provisions for bank
switching inside TOS. So sure you can cram 32 MB into an ST, but you won't
be able to use more than half of it.

In a way, the original author is right. The ST and STE is limited to 4 MB
of DMA- and Video-accessible RAM total. Any other byte you put in is alter-
nate RAM, which is usable only with MagiC, MiNT, or TOS versions 2.x or more
recent.

Cheers Peter

PS.: The term 'usable' here of course refers to the ability to exploit
the RAM with common software. Sure you can write your own code that
bank switches the 32 MB, or uses more than 4 MB with TOS 1.x, but
common software will be useless in this respect.

mb@tos.pl.net (Mario Becroft) writes:

> Also, can the port act as an input, and how would I cause it to act in
> this way?

Yes, yes, yes ;-) The port is bidirectional, but only has 8 data lines (fed by the sound chip PSG port B), Strobe (PSG port A bit 5) and Busy (MFP general purpose register bit 0, also timer A input).

Unless you're VERY time critical, I'd suggest to access the port via XBios calls. Giaccess() (Gi is for General Instruments, who made the sound chips in many machines) lets you read or write port B (register 15), while Ongibit() and Offgibit() lets you turn on and off individual bits of port A (only bit 5 is interesting here). Using Giaccess() you can also read register 7, manipulate bit 7, and write register 7 back, to control the data direction of the port. Mind you at system boot TOS sets it to output, possibly causing a short circuit with badly designed hardware. Find the Busy bit at bit 0 of register 0 of the MFP, the location being $fffffa01, for polling. For using interupts or the timer I suggest you grab a datasheet on the MFP 68901, as it's capabilities are immense. For interupts, XBios Mfpint() helps only a bit.

Cheers Peter

From: mgrove9@owens.ridgecrest.ca.us
Message-ID: <5r9prtiop2@ash.ridgecrest.ca.us>
Source record: 119239

I posted this earlier through another ISP, but when logging on to this server it dosen't apeare to have showed up.

I am testing a new provider. They use an NT server. Proxy is used for HTML, which is a little slower than the Unix based ISP I have been using, but CAB now can resolve almost any site. Kind of nice. News and mail work fine to, but the admin says they use a gateway for FTP. It is the same domain number as the nameserver, but all the FTP apps I tried cannot resolve the DNS outside my local area. What can I add in the STiK config file so apps like Newsie and AFTP can recognize the gateway?

```
ALLOCMEM = 300000
SERIALPORT = Modem 2
CDVALID = TRUE
DIALFILE = dial.scr
TTL = 64
PING_TTL = 255
MTU = 256
#MTU = 1500

I think they told you nonsense. If a drive can be formatted at all, you
should be able to format it with any piece of software that supports
formatting IDE drives. It is documented how an IDE drive has to be
formatted and this is the same for all IDE drives.

The term "low level formatting" is something made up by DOS users in
order not to confuse formatting of a hard disk drive with using the DOS
"format" command. For non-PC platforms there is no such term.
If we are talking about formatting hard disk drives it's what the
SCSI/IDE specifications mean about this topic, i.e. sending a SCSI
FORMAT DRIVE command or an IDE FORMAT TRACK command to the drive.

> A usual formatting is however required, so that the drive gets a file
> system.

That's what the DOS format command combined with fdisk does and what is
called partitioning on the Atari.

1020. bulletin: change in MIST directions

Newsgroup: comp.sys.atari.st
Date: 1997-07-25 00:00:00 UTC
From: Al Andalus <erasmus@spam.is.a.trademark.com>
Message-ID: <Pine.GSO.3.96.970725064228.1025D-100000@iglou2>
Source record: 119244
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st,comp.sys.atari.st.tech

Word has arrived that Post Road is closed just south of the
show site for repair of a railroad crossing. All those who are
coming to the MIST show from the west, south, or southeast are
advised to take I-465 to exit 46, US-40 (Washington Street), and
go east on US-40 to Post Road. The show site is located south
of the intersection of Washington Street and Post Road.

Much software can display ordinary JPEGs step by step, I wonder in
which way Progressive JPEGs can help this process.
I wonder how large these anim-JPEG files would be, I suspect they
don't use delta files or anything like that, so it'd be a clumsy
animation format, like GIF.

Contrary to all the flaming I've got re my comments about CAB2 not delivering *all* the goods, I am proficient enough to be able to advise you here!!

I have a 4Mb STf single floppy (720 DSDD) that I never intended to use for www activities. Curiosity however encouraged me to try and this is what I have got setup.

*A floppy disk extended format to 83Kb containing:

Stik 1.08
NVDI 2.5 for fast screen draws
Font Switch for my preferred screen font
Hard Drivin 7/MFP - to maximise throughput (max 19,200)
MDISK 6.9 reset-proof RAM disk for the cache
CAB 1.5 and one for 2.0

I employ the Ram disk as the cache folder for CAB and use either 1 or 2MB for it.

Stik unfortunately, has to boot/run off of the root directory/drive which is A: for floppies only. So won't run from the RAM.

This setup is secure as much as can be. The only gripe is that not all sites employ simplistic HTML coding and some graphic 'maps' are not displayed by CAB and thus making entry into the site impossible and/or bombs.

I also have a similar disk on which, instaed of CAB I have AtarIRC, Telnet and, similarly, one for Newsie/POPWATCH.

I have had no success with MG-FTP at all.

For IRC I swap files to /dcc send and receive to the Ram disk and these go transparently in the background.

Hope this helps! Floppy users can have internet access without a HDD!!!

Mark

RAL> hard drive and will it work on my Falcon?Should I format it?And will
RAL> my ICD hard drive utulities work? Any information about the
RAL> compatability of this unit would be greatly appreciated.

I can't speak for that particular drive, but I just recently installed a
Toshiba 1080 meg drive in my Falcon and it works great. Installation was a
simple swap and then partitioning the drive (you don't format IDE drives).

It's not only much bigger than the Conner that came with my Falcon, but it is
MUCH faster, too. It really flies. A great $200 investment.

>PING_TTL = 255
>MTU = 1500
>RCV_WND = 4500

RCV_WND sould be 2 or 3 times MTU. MTU is given by your ISP
Ask for SLIP MTU, it's usually different than PPP MTU.

note: MSS is gone since STiK 1.11

>UP_RESPONSE = 2
>USERNAME = ######

*** Hostanme is the domain of your ISP ***

>HOSTNAME = ridgecrest.ca.us
>FULLNAME = Michael Grove

1041. Pacifist + SDD + knowledge - Help! missing term in equation

Newsgroup: comp.sys.atari.st
Date: 1997-07-25 00:00:00 UTC
From: las@cbgbcs.cb.lucent.com
Message-ID: <5rb086$lgk@nntpa.cb.lucent.com>
Source record: 119265

In my case, the missing term is knowledge. I have PaCifiST, I have licensed the SciTech Display Doctor 5.3a. My sys has an STB Lightspeed ET4000W32p VLB card with 2 MB RAM. SDD recognizes my hardware and reports itself as enabled and working normally and that the linear frame buffer is enabled. It seems to work reaonably well with Executor, Nesticle, & GCyst, for example.

HOWEVER, I appear to have a least two problems, one PaCific related, the other probably not. Pacifist first: I thought I would be able to use color at higher res than 640x200, but I have not been able to, thusfar. Sure, I can select a higher res, say 640x400, in line mode, and I can see the mode during the memory test, but when the desktop comes up configured for ST medium res, it is the latter to which the display reverts. When configured for low res, the display stays at 640x400 and the desktop appears in a 320x200 block in the upper-left quadrant. It's been a long, long time since I used my Atari 520ST, but I never had occasion to use anything but its box-stock settings, so I'm afraid I never really knew what to do to use a higher res. Please help, if you can.

The other, non-PaCifiST thing is I can't seem to set up the refresh rate, centering, sizing, etc... for my monitor using the Win 95 utility. I just get torn useless screens which I can't seem to adjust using the keyboard controls. If I don't use the STB setup utility to set the timing, I can only get these nasty interlaced displays at the higher resolutions. I've tried reading the help and it's either not there, or I missed something. Maybe something helpful will come when my permanent license arrives in the mail (they sent me a temporary license via email after I registered). Anybody know anything helpful?

Regards,
Larry

1043. bad floppy?

Newsgroup: comp.sys.atari.st
Date: 1997-07-26 00:00:00 UTC
From: David Baisley <david@columbia.edu>
Message-ID: <01bc9a0a$fda487a0$0100a8c0@hal9000>
Source record: 119181

I received an Atari Mega STE and the harddrive was not booting.
Upon opening the case I found that the controller was lose and I reseated
it and
presto the hardrive worked.

What did the above have to do with a bad floppy? Well upon replacing the
case I put a screw through the floppy cable. (Yeah I know real brilliant.)
Well I replaced the cable with a pc one and it didn't work. Then I tried
replacing the
drive with a pc high density one and the new cable. (I didn't think this
would work but
what the heck right.) This didn't work either. I have seen some info on how
to convert pc drives to low density atari drives and also read that a Mega
STE might have had a high density drive in it.

To make a long story short (too late!) I need some help figure out what is
wrong or at least some tips on where to go now (maybe even some technical
diagrams for atari mega ste with jumpers etc. and yes I searche dthe web to
no avail).

Here is the behavior of the drive.
1) If I leave a disk on boot up it fails to boot and says error with disk
2) If I boot off of harddrive and try to read disk it says
error with disk or no
disk in drive
3) If I try to format a disk it seems to go through the format process
little bar moves all the way across the screen but on
verifying format
it gives error with disk or no disk in drive.

The above happend with bad cable, with good cable and old drive, with good
cable and new drive and even with bad cable which I repaired by reattaching
little ribbon cable wires (ugh that was no fun).

Any info (pinning, how to use pc floppy with easy to follow directions)
would be much appreciated. Thanks in advance for any responses.

David Baisley

What happened to Fugizone..I thought that was a staunch ATARI page..
Now its got POMPEY PIRATES banners and links.. offers Illegal Software
for download straight from Fugizone and proclaims that no one really
cares about software piracy on the ST..

Has the site been nobled.. I cant understand it ?.

Cheers !ynoT (ATARI Programmer)

1045. ST magazine giveaway

Newsgroup: comp.sys.atari.st
Date: 1997-07-26 00:00:00 UTC
From: glennj@cs.umd.edu
Message-ID: <5rdqj5$h2@mimsy.cs.umd.edu>
Source record: 119183

I have a few years' worth of old ST magazines to give away to anyone who
has any use for them. Otherwise they're going in the dumpster.

Current Notes:
88: Nov, Dec; 89: Jun, Jul/Aug, Sep, Oct, Nov; 90: Jan/Feb, May, Jul/Aug, Nov
91: Mar, May, Jun, Sep

ST World (American newsprint magazine):
89: Aug, Oct, Nov, Dec; 90: Ja, Feb, Mar, May, Jun, Jul, Aug, Nov, Dec/Jan

STart:
89: Jul, Nov; 90: Feb, Mar, Jun, Jul, Aug, Nov, Dec; 91: Jan, Feb/Mar

STLog:
89: Jun, Jul, Oct

AtariUser:
91: May, Jun, Aug, Sep, Oct, Nov

Additional:
Atari Interface 9/89, 7/91, 3/92; ST Informer 4/90;
Atari Advantage 4/92, 6-7/92; ST Connection 12/91, 1/92, 2/92;
Atari Explorer 1-2/91, 3-4/91; Puget Sound Atari News 12/89;
Atari Classics 12/92; ST Format 3/91; ST World 1/90; ST User 5/91

Available for pickup in Columbia MD or College Park MD, or you pay shipping
(about 25 lbs from ZIP 21046).

Hi Gilles,
I believe you'll have to do one of the CPU-clock fixes (a very well known
problem).
You'll find descriptions of them in the troubleshooting section of my
homepage.

Best regards,
Claes

Where can I get the registered version of CAB 2.5 in th U.S.???

1048. STiK Dialing Script

Newsgroup: comp.sys.atari.st
Date: 1997-07-26 00:00:00 UTC
From: Dennis McGuire <mcguired@moose.erie.net>
Message-ID: <Pine.LNX.3.95.970726191155.21156C-100000@moose.erie.net>
Source record: 119186

Our friendly neighborhood ISP has added terminal servers to
support additional phone lines. You need to type in "BBS" to get past the
terminal server to your shell account. Obviously, this doesn't work when
my STiK dialing script is written to access the shell account directly.
Is there any way to do conditional branching using the STiK dialer?

Please don't suggest that I find another ISP. The other local
ISP's don't even support SLIP or shell accounts!

> SHN (Svenska Hemdatornytt), but were there ever any Swedish Atari
> magazines whch weren't part of other mags?

Hi Iggy,
To my knowledge there has been only one commercial swedish Atari magazine and it was called Atarivarlden (the Atari world). From the start it was the club magazine of 1ST club, but when Atari started to close down several countries' local offices, the 1ST club's funding became too small and some of the members tried to run the magazine as a commercial one. I don't know how many issues they published before they went bankrupt, but I don't believe there were many of them.

For the moment there is no commercial magazine, but SAK's (Swedish Atari Club) magazine, AtariMagasinet, that's distributed to all the members is a very good magazine (where I among many others write articles).
There is also a swedish supplement to Atari Computing, as there previously was to AtariWorld (naturally I've written articles for those too ;).

Best regards,
Claes

Marcel Veltmaat <marcelv@stack.nl> wrote:
: Hello fellow Falcon owner,

: Pherhaps anyone can point me to a place where I can find more effects for my
: Falcon. I've been using all sorts of programs for the Falcon but none have
: any hall effects. And I'm desperatly in need of hall and reverb right now.

: Thnx

There are a number of programs that allow this - Musicom 1 and 2, D2D
(came with the first Falcons), Audio Fun Machine...my recommendation is for
you to check out any Atari FTP site that has Falcon software on it, and you
will find many programs that should meet your needs.

Exactly, although it uses just one scsi id it uses a lun number per device.
This means that they have to be different drives letters.

> You can under NT (but that's another story! ;-)

Yes well NT is another story indeed!.

Regards,
Kevin. (Sysop@fortress.org.uk)

I have an offer for $125 for my Atari 1040STE complete system. ALong with software. See my previous post "FS- Ontario,Canada 1040STE complete

I will be accepting an offer on Sunday July 26 unless there is someone else out there who would like to top this offer. Just so that I'm giving everyone a chance on this 'don't miss out on this' deal! You won't be sorry for buying this as there is so much software going along with it you won't believe it. There are games galore from Monkey Island, to Leisure Suit Larry, No More Lemmings, Shootem games, puzzle games, word processors, Mug Shot, image editors, Telnet and communication software and BBS software too. This machine once hosted a local BBS here in Southwestern Ontario.

Act quick! Don't let this baby get away from you!!

Highest offer is $125. Do I have any
other offers? Please let me know by Sunday before I close the current deal
I am holding!

Remember trades and cash welcome!

See me list below!

Complete
1040STE system for sale.

Includes:

Colour stereo monitor

Small Hard Drive

Mouse

1040ste

14.4 USR modem

Midi Connectors

all connection cables

Various software including:Word
Processors, BBS, games (Leisure Suite) Monkey Island, racing, puzzels,
and more!, virus, and anything else you'd want.

Complete unit is in great condition
and everything in working condition.

Serious inquiries please contact
me directly thru e-mail at:

impulse@rogers.wave.ca

I live in South Western Ontario.

Best offer accepted.. money or trade.

I am looking for:

1 or 2 gig HD

Scanner (Colour flat bed)

Laser Printer

**** Only those of appropriate
inquiries or offers will be contacted ****

Thanks

RE: FS-Ontario,CANADA 1040STE COMPLETE

Highest bidder is $125. I will be accepting this on Sunday unless I have any higher takers?

Don't miss out on this great system. Has many games and apps that you just won't believe.
Everything from Monkey's Island, Leisuire Suit Larry, NO More Lemmings, Mug SHot, word processors, telnet, ftp, BBS software (for running your own!), demo's and help files too. Too many to list.
See my previous post for more info
Make an offer now, kick yourself later for not taking a chance on this system. It could be yours!

Thanks for the letters about the other note I posted in HTML and text, so sorry. I'm new to Newsgroups.

Hope to hear from you soon. Remember trade and/or money accepted!

1070. Re: Hardware details of parallel port?

Newsgroup: comp.sys.atari.st
Date: 1997-07-26 00:00:00 UTC
From: mb@tos.pl.net
Message-ID: <6ITOC7F@tos.pl.net>
Source record: 119267
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Well, sorry about all these followups to my own post, but it seems I have at last found the answer to the problem.

The Atari Compendium, under the MFP section in the memory map has the following entry:
"MFP-ST General Purpose Pins (Parallel port data register on Atari machines)."

I thought this was referring to the parallel port where a printer would normally be connected, but evidently it refers to something else.

As it turns out, the parallel port is controlled via the sound chip, and with the help of Atari ST Internals I am now able to read, write and change the direction of the parallel port.

The only thing that I still haven't worked out is how to control the strobe line. Even though I set the appropriate bit in the sound chip port A register, the strobe line is always turned on.

Hopefully someone has found this to be of interest...

Hello,
I recently Bought Cubase Audio For My Falcon, The only Problem is that I can't run it on my Falcon, Every time I try to I get 11 bombs on the screen. I know it isn't my Key because I tried The package on my STe and it worked! I know it isn't the software the is corrupted because I have the original version 1.0, the original version 1.1 and the update from the net (Got it from the Steinberg FTP site). It only leaves me with one option... My Falcon is defective. I have TOS 4.4 and 4MB of RAM. Does anybody know what is going on? BTW: I don't have the C.A.C. but I have the F.D.I. Is there a Hardware fix that I have to do? Can anyone help me?

(I never Experienced a DSP or audio problem before, ether it was with Quincy or Digital Home Studio, Everything was in working order.)

> maximum for the Falcon is still 14 megs.

Pre-STE machines would theoretically allow you to have up to 15 megs 640k or simply put "15 and 5/8th megs of RAM".

This "strange" amount is due to the design of the ST memory map - the address of the cartridge port is at $00FA0000 [the aforementioned fifteen and five-eighths megs]). TOS ROMs, and various hardware chips appear after the cartridge port in the ST memory map, and before the 16 meg physical address limit of the 68000.

With the STE, the TOS ROMs moved from adress $00FC0000 [fifteen and three-quarter megs] to address $00E00000 [14 megs], where it stays to this day

However, you face a much lower memory limit on an ST/STE. The Atari MMU chip only has 22 address lines, which limits it to only addressing four megs of RAM. To address higher than this you would need a new MMU (and, quite likely, new DMA, Shifter, blitter etc)

The Mega STE can (I think) take more than four megs of RAM.

The TT can take up to ten megs of ST RAM, and, depending on whose memory board you buy, hundreds of megs of TT RAM. The board I bought for my TT can take up to 128 megs of TT RAM, although I only have 16 megs in it at present. I've heard of one that can take up to 256 megs.

The Falcon can take sixteen megs of RAM, but will only address up to fourteen megs of RAM (System ROMs and hardware take up the space from fourteen megs to sixteen megs). No TT RAM is addressable by the Falcon. Third party upgrades may allow this, but in it's native unaltered state, the Falcon cannot.

--

Any email sent to my address will bounce, however I can now be contacted via an intermediary : gem at tos pl net. I would like to apologise to the genuine respondents that this may inconvenience.

Quote For The Month:

(From an infomercial currently playing on New Zealand Television)

"What do our customers tell us about using the Pure Water Distiller?"
"... [The Water] is so easy to drink, compared to other water"

Yeah, I agree. Whenever I want to drink normal water, I have to consult a _really_big_ instruction manual - and even then, it takes me half an hour before I can start to drink, because there aren't any pictures showing me how. But with the Pure Water Distiller, they include a simple one-page leaflet - WITH PICTURES!! - that show me how to drink water...

>support big drives, zips, etc. should i forget it and buy HD driver? thanks, Micah.

You given the right answer :-) Forget AHDI..
It' works, that's correct. But it is slow and can't support
a ZIP with all his features. All ID's must be in a 'line' like ID0, ID1, ID2
If you have a 'hole' in that line, ahdi can't found devices after the hole..
Forget it ;-) The best way is HDDRiver.

First i take HuSHI for all, but the last is the best..
(AND !! so i have a Driver with SUPPORT)

From what I've seen, this is normal. The higher screen modes
don't seem to be of any use because PaCifiST still only uses the
same number of pixels as the particular ST screen res in use.

Hi Barry!

Thanks for this reply to brankrob@st-el.si - haven't heard from him yet.
If he is reading this, a demo version is available for download from
atari/files97 as SCOOTER.ZIP, and also from bulleting boards. Or on a disk
from me, if he asks, at nominal cost. The demo is fully functional apart
from saving and having only a selection of components from the full
library. I am told it is more powerful than anything else on the Atari and
most other platforms, and runs on all Atari emulators AFAIK.

From: Dan Haynes <haynesdSPAMBLOCK@ibm.net>
Message-ID: <01bc9ab1$59ef5fc0$e4f32581@impasse>
Source record: 119131

Okay, I'm just about ready to succumb... so somebody gimme a push! :-)

I've been programming embedded systems and PCs for living for a long time... and once upon a time I owned a 520ST. I did not keep up with what went on in the Atari world after that. I've always got an interest in toys though, so I'm looking for a fun one - but I don't know enough about the last systems released by Atari. If anyone is able to fill me in or point me in the right direction I'd appreciate it.

What I'd like to find is one of the 68xxx based Atari systems with a SCSI interface, lots of RAM and a hard drive. Either monochrome or color display is okay, but I want to use an SVGA type monitor on it. I also would like something with a coax or tp Ethernet interface.

The real clincher is, I want the developers documentation for the system as well. I had the developers package for the 520, and I intend to program the bare metal, so complete and accurate low level documentation is essential. I need to be able to bring the system up from reset using my own EPROMs

So, how 'bout some feedback? Do any of the systems lend themselves well to opening up the case and running with ROM emulators installed? Are full specs/hardware details for the TT and Falcon systems available anywhere? Were there any versions that had sockets or FLASH that would be easier to work with? I'm assuming the last systems were surface mount boards, is that correct? What were the last through hole designs?

Anywhoo, if you've got 'em, talk to me! :-)

Thanks,

Dan Haynes

Hi All

The next Meeting will be in The Queens pub Next to the Interchange in the Bradford city centre, on sunday 3rd of August at 1pm until 3pm.

You could call this the WRAG summer P*ssup.

If this goes well we may have an XMAS P*ssup as well.

Topics for discusion are the feasability, of forming our own PD Libary,

All are wellcome, and also due to Brian (who kindly opened his home for our meetings moving) we also need to find a new place to hold our meetings so bring along any ideas as to where we can hold future meetings and still have plenty of room for people to bring there computers if they wish.

1093. Looking for an art program...

Newsgroup: comp.sys.atari.st
Date: 1997-07-27 00:00:00 UTC
From: quantum@sunlink.net
Message-ID: <5rgn76$1ov$1@mars.sunlink.net>
Source record: 119140

Hi! I'm looking for a decent art program for the Falcon030. I need
to do some basic graphics for a web page, so GIF or any format that
GemView can convert to GIF is necessary. Also, I'm a poor college
student, so I don't have a lot (read, none) of money, therefore shareware
or even freeware is great. If you have any favorites, I'd love to hear
them! Please email them to me at the address this letter is from,
quantum@sunlink.net.

Thanks in advance for any help! I appreciate it,
George

** ST Software For Sale **
** All disks and doc are original. No copies or pirated software! **

Games

Battlehawks 1942 by lucasarts. Biplane flight sim/fighting. w/Manual. $7

Wonderland (Alice in Wonderland adventure game) - w/Box, Manual, and
Maps. Works in monochrome too. Impressive game, perfect condition. $10

Prince of Persia - The classic game, hard to find for the ST. w/Box and
manual. $7

Life & Death - classic surgery simulator. w/Manual, box, & rubber gloves(!) $10

Leader Board - excellent golf simulator. w/Manual and piracy key. $7

Shufflepuck Cafe by Broderbund. Play airhockey against aliens. Great
graphics and sound effects. - w/Box and Manual. $7

Flipit and Magnose: Water Carriers from Mars - Unique platform game, has
two-player mode. Disk only (no manual) $5

Hostage Rescue Mission - w/Manual. $7

Fascination -- Adult adventure game. w/manual. 18+ please. $10

Fair Dinkum Puzzle Pack -- Word Search Creator and Crossword Creator II.
w/Manuals for both. $9

FLOOD by Bullfrog/EA. w/Box and Manual. Great Game! $7

Populous. w/Box, manual, and list of cheat codes. $7

Typhoon Thompson by Broderbund. w/Manual. $6

Stir Crazy featuring BoBo from Infogrames. w/Manual. $6

Top Gun. w/Manual. $4

Silicon Dreams and Jewel of Darkness -- adventure games. w/Manuals. $7

ST Comics -- very rare collection of interactive comic books created
entirely on ST computers. 16 disks. $10

Graphics

MultiViewer Graphica (MVG) by Dr. Bob. w/Box, manuals. $8

Productivity

Metapyschology Primer #1 by clear thinking software. Manual. $5

STalker 3 by gribnif. Excellent modem program. w/Manuals. $10

STeno by gribnif. Text editor, works great with STalker & NeoDesk. w/Manual. $10

WordPerfect (11/1 release). No docs, but I do have the keyboard layout
template and extra printer drivers provided by WP Corp tech support. $7

GramSlam 3 by Wintertree Software - grammar and style checker. w/Manual. $9

SoundLab from dmj software. Registered version with manual and bonus disk
of sound samples. $6

Flash II by Missionware Software. Workhorse modem program. w/Manual. $6

STraight Fax 2.1. Premiere fax program for the ST. w/Manual. $10

The Cryptographer by Fair Dinkum. w/manual & reg card. $7

Utilities

CodeKeys by CodeHead. Macro program and more. w/Manual. $6

HotWire by CodeHead. w/Manual. $6

CodeHead Utilities. w/Manual. $6

Diamond Edge by Oregon Research - Hard Drive recovery, repair,
diagnostics, optimization. w/ Manual. $8

Diamond Back II by Oregon Research. w/Manual. $8

Programming

Power C by MIX Softare. (This is for MS-DOS, not ST). w/Manual. $5.

Free Stuff!

Ask for a free item with each item you purchase. (Buy one, get one)
My choice, but available items include: STart disks, TOS disk, VKiller
2.2 (registered), TimeLink/ST, and more.

TERMS OF SALE

Buyer pays postage and COD charges (if you want for COD shipping) from
California.
Credit cards/e-money accepted via web page payment system, enquire for details.

I'll consider Macintosh hardware/software in trade. (No pirated programs!)

Questions, comments, alternative offers? E-mail me.

>is correct on the window bar!

I thought this too: but have found out that CacheEd is itself evacuating
the files. When you find an interesting file with it, like 00000123.htm,
length 12345, try this:
Get the File Selector, select FIND, type *0123.* and Return, then Return
when it is found (in subdirectory eg S/); do ^I (or click INFO) and click
READ-ONLY and Return.
Now, in CacheEd, click View: lo and behold! there it is! exactly as shown.

So why does CacheEd nullify/evacuate files? Anyone know?

Charles.

1099. Newbie questions re: machine prices

Newsgroup: comp.sys.atari.st
Date: 1997-07-27 00:00:00 UTC
From: df663@cleveland.Freenet.Edu
Message-ID: <5regmi$4po@alexander.INS.CWRU.Edu>
Source record: 119209

Could someone please provide me some guidance.

I have two opportunities to get Atari machines (my very first!).

One: a 1040 w/ color monitor and a couple of music (sequencing)
programs....$225.00.

Two: a Mega 4 ST w/ BW monitor, 25 Mhz accelerator, two hard
drives...$350.00.

Please... what do you think????

Eric.

> WWW: http://acp5.chemie.uni-kl.de/seimet/index.html

Well, Uwe, nonsense is right. I have a Fujitsu 810meg IDE 2.5 installed in my Falcon now. I formatted it with AHDI!!! This was a bit tricky, but the Fujitsu is an excellent HD. I was able to do this by doing the Texas-Two-Step.

I had to jump the two outside pins first for AHDI to recognized the drive was there and attemping a unsuccessful format. Then after removing the jumper the next formatting attempt did work OK. It does take about 25min for it to complete all the formatting and partions (4 in my case). Why this works I'll leave the answers to you, but it does work...

Note: The Fujitsu is so quiet you can't tell it's formatting, but it is.

Howdy !ynoT,

I just checked'em out. Well, I see what you saying. Unfortunately, it seems some PC users with emulators don't respect the intellectual property rights of JTS. Surely, Atari Corp. wasn't an icon of virtue, but this doesn't give people the right to walk all over everyone concerned. JTS receives about $14,000,000 a year in royalties which help to support their efforts. I think we all should hope that JTS succeeds. They make great HD's and the future of Atari developers who pay for these rights are being infringed upon. I hope that some of those who *think* Atari is dead don't get they're wish...

Regards,

Charles

I suppose it depends what you want to use the machine for but, really, there is no contest - the $350 Mega is a far better deal. You are getting 3Mb, 2HD, faster machine, better keyboard all for the difference of $125. Colour mons. and ST 124s go for around the same price second-hand so there's no difference there.

If you are into games you will need to get a colour mon for the Mega.

If you are into "serious" stuff (DTP, music, database etc.) you will need to supplement the 1040 with HD and b/w mon.

Go on! Offer the guy $300 for the Mega set up :-)

George,
It probably isn't unless he emulated an IBM computer
with Falcon Speed. Someone probably could write
software for the Atari to hook up to AOL but it
probably is not something that will happen.
Your friend may do better to use an ISP with
a Stik connection or look into the new PPP Kit
from ASH to use with CAB, Ant Mail, and Newsie.
Hope this helps.

Source record: 119220

Okay, a few weeks ago I posted a message to the effect that whenever I high-
lighted (single-clicked) a desktop Icon (whether it be a hard drive Icon or
some app. that I had dragged to the desktop) and pressed the <space> key,
that it promptly disappeared. Well, I'm happy to report that I found the
culprit-it was a corrupted NEWDESK.INF file. I know about the 4096 byte
size limit, and had kept it under that, but when I loaded it up into Edith,
I found repeated links, dead links, etc, etc,... so I deleted it, rebooted,
saved a fresh NEWDESK.INF file, and redid my installed apps, and the Icon
associations... Been fine ever since...! ;^D

True...I also am a little peeved at the way FIJIZONE are proclaiming
POMPEY PIRATES to be the saviours?.. they seem (no ARE) saying that
such software pirates are great and always have been and are helping
ATARI ?...
I know at least three long standing UK public domain libraries who
are trying to stay afloat by selling Commercial games that are
LEGAL..and bought in good faith from ATARI users who also bought them
originaly and legaly, what chance have they of earning an honest
living while pages like Fujizone are activly supporting software
piracy?

>$14,000,000 a year in royalties which help to support their efforts. I think
>we all should hope that JTS succeeds. They make great HD's and the future of

>that some of those who *think* Atari is dead don't get they're wish...

Yes its a little sad that they are actualy giving the TOS roms for
download with PaCifiST...the pacifist release does not come with such
roms. so FUJIZONE have added the roms to the download package..:(

I ahve PaCifiST installed.. and manage with not one single pirated
game.. but then again I dont have anby games on the ST either :)

Last I checked with its author, ASH's PPP-Connect is NOT
a STiK clone. It is a totally new stack with a different
API and therefore will not work with AntMail or Newsie.

It does work with CAB, because PPP-Connect comes with its
own CAB.OVL to match the stack. ASH has authors working on
plug-in modules that will provide Mail/News/FTP/Telnet to
CAB via PPP-Connect, but it won't be STiK compatible.

Some provider chanche that own system to a newer basis.
Somebody will lost slip or some older terminal emulation.
Also the user must found a new way to get a nice access.

>I know that development is (has been?) underway for STiK, supporting PPP,
>but it's been a long time since that was first talked about. I know that
>STiNG has some sort of PPP support, but it's not fully developed either, is
>it?

Yep, that time for development was a bit too long.
I like to get ppp in the same way as i was get it for my mac.
That's the a modern and a fast protocol.

>What about the PPP dialler from Application Systems Heidelberg (ASH)? Is
>this something which can be bought right now, or is it "promiseware" as
>well?
>In case I can get it now, how much does it cost, and more importantly -has
>anyone tried it out yet? Experiences?

No experiments.
That's really a nice pice of software!
I get it few days ago and i'm suprised!!
After 5 min. i have a COMPLETE setup incl. all parameter how was i need
to get a nice access to rhein-main.de, but all with not one eye into the manual!

The point is: You must have a MtaskingOS like MagiC or also..
That's a 'must' ! Otherways ppp-connect will not work.
With CAB 2.5 come a new CAB_OVL, that only work with ppp-connect!
Do not overwrite your old CAB_OVL, save it befor, you have to
use the old release for STiK or STinG.

>I'm using an STe with 4 Mbytes RAM, TOS 2.06/MagiC 4/NVDI 4/Thing
>-540MB SCSI harddisk via ICD's "The Link II",
>-a USR "Sporster" 14.4K modem as well as the "RSVE" high speed modem

That sounds nice for ppp-connect :-)
Ask ASH how you can get it!

Regards, Robert

Nostrodamus phrophesised this from trax@collegeleboeuf.qc.ca to All...

Hi Stephen!

t> I want to install High Density (1.44 meg) drives in both my Ataris
t> (4meg STE and Mega 4). I have enough information to handle the
t> hardware mods, but I need people to send me EXACT information
t> regarding which Drives they've used successfully and the dip-switch
t> and/or jumper assignments they've used on these drives.

Look at Hallvard Tangeraas' web site, there is a file there that tells you
how to use a Sony 1.44Mb drive, as a 720Kb.

He's working on the remaining info to go "the whole hog" to 1.44Mb, which
basically requires a signal fed to pin 2 of the Shugart bus to tell it that
there is an HDD disk present.

c> saw demo prg. a few years ago and it was excellent.
c>
c> My father has it, the version 2 in monochrom. Seems to be well, but
c> I didn't used it myself. I can ask him more precise questions and his
c> opinion, the next time I go back home.

Available in the UK for the past month or so is Scooter, a very capable PCB
CAD program featuring all kinds of options and drivers for plotters and a
wide variety of printers and image formats.

It works on any Atari with a minimum 1Mb RAM and at least ST-High resolution;
it works on graphics cards and layers are coloured on suitable systems. AND
it's in English! (g)

It's about 50UKP, email xlator@cix.compulink.co.uk for further details.

This has been a public service message! (g)

R>
S>> As far as I know ST, STE and MEGA STE:s are limited to 4MB total.
R>
R> You can get up to 15MB in a ST ...

I have an 8Mb SIMM in my ST, however the MMU clip system that's popular for adding extra RAM interfers with the rear of the board. That means that you need to add an IC socket for a spacer, which then means that the keyboard won't go back (my ST is in a Tower case, no problem).

Also you need TOS2.06 ROMs OR MagiC 5.11 or better for the extra memory to be recognised, earlier versions of MagiC are suitable except that floppy disk access is bugged (fixed in 5.11).

HTH.

1119. FS: Atari 1040 STf computer: $45 + shipping

Newsgroup: comp.sys.atari.st
Date: 1997-07-27 00:00:00 UTC
From: Bill Frandsen <bfrandse@rrnet.com>
Message-ID: <01bc9aae$076b70c0$99b70bce@pac-man>
Source record: 119229
Cross-posted to: comp.sys.atari.st,rec.games.video.marketplace

I have an Atari 1040 STf computer available for sale. The price
is $45 plus shipping costs.

The unit has been cleaned inside and out (no dust bunnies
or caked on dirt+grease on the keyboard). The unit turns on,
and since I don't have any system disks to test it with,
it will boot into the rom bios within 30 seconds or so.
Connecting a generic joystick to the mouse port and
repeatedly pressing in each of the four directions moves
the mouse as expected.

So, everything seems to work as it should---HOWEVER,
since I don't have any disks to test the floppy drive out
with, I cannot guarentee that it works, but the rest of
the system is tested an works fine.

Included is ONLY the bare keyboard/cpu console,
no additional cords (generic a/c line cord, video cord,
etc..) are included. I do have the instruction manual
for it however and will include that.

- Shipping via USPS priority mail or UPS ground to lower-48
U.S. states ONLY. (sorry, I cannot ship out of country)
- Buyer pays all shipping costs.
- Prepayment required in form of personal check or money order.
- Multiple references available upon request. I've been selling
extra videogame carts in rec.games.video.classic for over 2 years.

Thanks much. Please email with any questions.
bfrandse@rrnet.com

1120. FS: MEGA-ST 4, MEGAFILE 60, 4160 STE (Canada)

Source record: 119230

```
For Sale:
---------

* MEGA-ST 4 (TOS 1.04, 4 Mb)

* MEGAFILE 60

* 4160 STE (TOS 1.62, 4 Mb)

Offers within Canada / US only! Will sell to best offer, or trade
for either of the following:

Wanted:
-------

* MEGA-STE (TOS 2.06, 4Mb Ram, Internal SCSI HD)

* Stacy 4 (TOS 1.04, 4Mb Ram, Internal SCSI HD).

Internal hard disk size un-important, local prices on SCSI drives
are rather affordable.

-------

NOTE: nothing against our friendly neighbors from down south,
just Canadian banks causing troubles for cashing foreign
currency of any kind, including American.

However, if you're interrested in trading your MEGA-STE
or your Stacy, we can arrange something, as there is no
currency exchange involved.

More details and other selling/buying items on my homepage.

For those who cannot wait, there is Mintnet and GlueSTiK. IRC clients have problems initiating a DCC CHAT or DCC SEND under GlueSTiK, but otherwise, it is a *very* stable package. Plus, the CAB.OVL for Mintnet v1.81 is incredibly fast, because the addressing is done directly to Mintnet.

.. you must target your main application. WP, DTP, CAB, music all
deserve mono display because of the time you spend looking at fine
detail on the screen.

but want to do some games later. Can most games run on a
>monochrome ??

Unhappily, no! There are AUTOs which display colours as greyscale on a
b/w mon. but what's the point! Most games rely on colour.

You must get yourself a mono. even if it's just for the health of your
eyes! You could then look out for a second-hand colour mon. (around
40UKP) for occasional games use.

OR .... do you have a modulator in your m/c? A TV isn't so bad for
games.

OR ... do you have a nearby TV with SCART connection? This would be OK
as a games mon.

>require an online overlay?

It still uses an overlay. For the most part, I think this is the best way
to do things. The HTML standards and HTTP standards move on two separate
tracks, and as such, you ought to be able to update them independently anyway.
CAB is first and foremost an HTML browser, not an HTTP navigator. The overlay
is the HTTP navigator.

Of course, the integration between the two could still be improved...

Jpeg uses lossy-compression, that is that it losse some details for
convert larger areas with the same color and compress it better. The
better compression, the most details that the picture losses. If you
compress a picture too much, you will see it like a color reduction
convertion.

non-lossy compression is that it means. No details are lost. But if it
will be called Jpeg, it necesarily needs lossy-compresion.

>

> correction.

Nah, you mix up a lot of stuff here. True is V42 is for modem - modem communication, and does error correction. But neither PPP nor IP has any means for error correction. Both only have checksum facilities to detect faulty data, to be thrown away. Higher level protocols, like TCP ensure the missing data gets retransmitted, which is totally different from error correction, but achieves the same goal.

I do not know the Zmodem protocol very well, but I understand it does the same, i.e. retransmitting non-acknowledged data, instead of doing true error correction.

> BTW, you must use HSmodem with Magic? I thought the Magic routines
> didn't need it?

HSMODEM still improves them, as MagiC does not implement the generic structures for accessing ports that has been implemented by HSMODEM, and has been widely accepted meanwhile. I might be wrong with the newest versions of MagiC, but I don't think so.

> Thanks,

I cannot really tell about FastSerial, as I never used it extensively.
I'm sure however, HSMODEM is more comprehensive, and appears better supported
than FastSerial. Definitely HSMODEM is spread more widely than FastSerial.
And I never had any bad experience with HSMODEM. So I'd say it's the choice.

FastSerial has a CPX to replace Atari's outdated MODEM.CPX, which HSMODEM
hasn't got yet. I'm however writing such a replacement suitable for HSMODEM.

You should be able to locate HSMODEM on any major FTP server. Look out for the
file HSMODA07.LZH or .ZIP.

>> You can get up to 15MB in a ST ...
>
> HOW do you achieve that without replacing the processor?

Why should anybody replace the CPU for that ? 15MB is easily prossible
with a 68000.

I wonder when people will realize that builtin network interfaces are a
very bad way to go. Probably never. Don't they even realize that their
favourite PC based browser, be it Netscape or Internet Explorer, has no
builtin network interface either ?

I have a MIDI lab that uses four ataris--one Mega ST2, 2 STE's, and one STF. All machines except the STF use neodesk. Whenever I load Notator, the machine will "freeze" and must be re-booted unless I move the mouse around during the program load!

Any ideas or suggestions would be GREATLY appreciated!

Mike McGowan

Ah, I forgot about that one. I have an older version in my download section, named MENUIN-E.LZH. But I see v2.49 is available at an AtariNet BBS I call, so I'll check that out (I don't have Web access, ATM).

Thanks!

TM> really like LED Panel, but it doesn't work in true color.

Menuinfo is the best choice for several reasons - supports all colour depths,
virtual screens, graphics cards, Magic and reports anything you like from
free RAM to fuzzy time. Even displayable in a window.

It's available from:

http://members.aol.com/DirkHage/www/eng/menuinfo.htm

The archive is named always "MINF???.LZH", "???" is replaced by the version
number.

b> I wonder if anyone knows anything about Platon PCB CAD program. I've
b> saw demo prg. a few years ago and it was excellent.

This was a development from PCBoard Designer and used to be sold in the UK by Cambridge Business Software, but not any longer.

b> I couldn't afford full version then, and now I would like to know
b> more about latest version, like version number, price, capabilities
b> etc.

I don't think it's marketed any more (in the UK at least), but there are two other packages worth looking at, from what I've seen.

CLA_V3 by Craig Graham at Data Uncertain. Shareware at 30ukp within the UK or 45ukp outside. The full version is Available from Craig's Web site along with other interesting utilities at:

http://www.i-way.co.uk/~c_graham/

Scooter-PCB which has recently been translated and marketed in the UK by Peter West (xlator@cix.co.uk). This is a german commercial package priced at (the equivalent of) over 100ukp in its home country, but is available in English for 50ukp + P&P. It's reported to be very good - better than PCBoard Designer. An English demo version is also available.

Both are very modern pieces of software that take advantage of your system's capabilities.

e>
e> Hi, I'm running Magic 5.03 (soon to be 5.11) on my STE and everything
e> is running very nicely. However when testing it seems that the
e> blitter is turned off. Is there anyway to switch it on? I can't see
e> anything in the Magxdesk anywhere nor in the magx.inf file.

Magic/NVDI display routines are faster than using the Blitter. Don't worry
about it - be happy that it's off.

e> I'm also having difficulty understanding how to change the icons for
e> Magxdesk. The instructions in the manual are not exactly
e> comprehensive. Basically how do I assign a new icon to, say *.wav or
e> *.avr (I think this might be better in 5.11?).

Click on the .AVR file, go to Options/Assign Icon, drag an icon from the
background window onto the .AVR name on the right hand side and click ok.
This will save the icon assignment directly to MAGX.INF

1147. Help! Re: Atari STE/STFM HD.

Newsgroup: comp.sys.atari.st
Date: 1997-07-28 00:00:00 UTC
From: Mick <manze@mail.usyd.edu.au>
Message-ID: <01bc9b11$da322540$b7394e81@manze.ucc.su.OZ.AU>
Source record: 119151

To anybody who may know...
I'm posting this on behalf of a musician friend who owns an Atari STE/STFM (not sure which one exactly).
Anyway, one day the fan in the PSU died but he kept using the machine regardless. After a few weeks (or months), the next thing to stop functioning was the HD... Now he has to load his prg's (Cubase) from the floppy. Atari HD's are as rare as hen's teeth here (Sydney, Australia), so what I would like to know is this: What kind of HD does the STE/STFM use and/or is it possible to somehow connect a modern PC IDE HD to these particular Atari models? (Probably asking way to much for the latter I'm sure!).

Thankyou.

1148. FS: 520ST 2.5/SM124: $75!

Message-ID: <33DCEAAD.3C79@worldnet.att.net>
Source record: 119152

I have one of the earlier 520STs for sale, which has been upgraded to
2.5 mb. The upgrade was pretty large, so I didn't have the nerve to
screw the top back down, but it's on there nonetheless. It DOES have TOS
in ROM, not on disk anymore. Also inlcudes an external Indus GTX-100
disk drive, Atari Mouse, and Atari SM124 Mono Monitor, along with all
cables and power supplies.
These have been closet items for several years, and I'd like to get
$75 for the lot, buyer pays shipping (depends on where you live).

If interested, please e-mail me. Thanks!

Tim

If I recall, AOL requires that you use their idiot software. Tell your friend to find another provider. There are a -lot- of providers who provide more for less. Typical internet accounts here in North Texas are about $10 per month. This includes DOS/Mac software and web site space (usually 10 to 25 MB). If you ask around Atari users groups in your area, they'll point you to a provider who is friendly to non-DOS owners. They're also the ones that have a tech staff who knows a bit more.

Atarimagazin actually became a stand-alone magazine for a couple of issues,
but went bust pretty soon I think. SHN also started a lovely atari-only mag
named AtariSTen which lasted 7 issues - 1 in 88 and 6 in 89. I was very
saddened that the latter's demise as I enjoyed reading it a lot. Both these
publications died off simply because of lack of sales.

Brian Roland (bjr@Edison.EbiCom.Net) wrote:

Hello...it's me (Brian Roland) on my wife's university account...
Seems my ISP has decided not to pick this thread up at all...so I've
just now found that the thread is even alive! Oh well...

I've done some more experiments...
Yes, I use HSMODEM7...

I generally use Geneva in the 80 column 256 color mode.

I've it set up default, as it came in the archive, and have not used
"setter.ttp" to tweak anything, as I'm not really sure what all the
settings do, or even where to begin optomizing the settings.
In the Auto folder is DRIVIN.PRG followed by SCC.PRG. Both are early
in the booting sequence, before NVDI, Geneva, Neoload, etc...

So far, it seems that 57,600 is very reliable, althoe at times my
actual connect rate is only 26,400. I've yet to get a full 33,600
connection.

When setting baud to 115,200, I get blank spaces when logging into
the shell of my ISP. Sometimes lines are skipped when running something
like tin or lynx.

When running STik, 57,600 works well, at 115,200, dialer connect and
gets ISP fine, but it hangs when trying to use a STik program like AntMail
or CAB.

Mint-Net fairs much better...it seems to work okay with either baud, but
I fear that is due to some kind of error correction...who knows...as I
don't know how to monitor modem performance under mint-net. If it's a
help, I use the KGMD distribution with Geneva as the AES.

Might I come out better to order a Mac modem cable and use the LAN port
with the modem? It's a Sportster 33,600.

Thanks,
Brian

I am one of those.. I love to see the web in all its glory.. I love
to see the pictures.. the animations, the sounds.. in fact I just
upgraded to 33.6 for better access. :)

But a lot of ATARI ST users (and thats who we where talking about)
using CAB will turn the graphics off for easy access...

>there must be a reason many web publishers nowadays build their whole page
>by using only graphics (which I dislike very much, try to view such a page
>using Lynx, for instance).

Because they don't care.. they care about PC users and making there
page look nice for the future users..

MY web page is colourfull.. it is ATARI optimised and does not even
use a background gif.. yet it will work with CAB very easy and very
fast.....AND look very nice on a PC as well. thats because I want to
attract ATARI users to my page.....you either make your page for the
majority.. or you make it for a set audience.. mines for ATARI users..

People running ATARI Pages that fill it with frames and jpeg and lots
of sounds and java should be shot at dawn because they dont care about
ATARI users..and thats why a lot of atari ST users turn gfx off

BTW I am talking ATARI ST.....not Falcon as they shouldnt have a
problem... but then they are not the majority of ATARI users are they
<smile>

1158. Free Mega ST2, SC1224 Monitor, Software

Newsgroup: comp.sys.atari.st
Date: 1997-07-28 00:00:00 UTC
From: sunspot42x@hotmail.com
Message-ID: <33dc85f1.2509500@news.well.com>
Source record: 119162

I have a Mega ST2 in fairly good working order (the mini-phono plug sound hack I did to it is acting up), and a SC1224 with no sound and no working power switch (use a power strip) that I'd like to give to a good home. I've also got a ton of software, including Populous and the Promise Lands expansion disk, Dungeon Master & Chaos Strikes Back, Oids, SimCity, 1st Word, WordPerfect and Interlink. TOS 1.4 in ROM. Lots of PD diskettes. Free. You pay shipping.

I have an Epson Action Printer 3250 I could throw in. It kinda sorta works -- a new ribbon would probably help greatly!

To reply to this message, remove the "x" from my email ID.

Thanks,
DF

Joergen Bak (prunus@post3.tele.dk) wrote:
:
: It do not require a multitasking system to run, but on single TOS you will
: not be abel to use some of it's functions.

That's interesting, as it contradicts what had bee posted to this same thread earlier. Can you be more specific about what functions will not be useable under single-TOS (or, better, what functions _are_ available under the various OS's).

: You can find some pretty exact info on Alexander Clauss own homepage at
: http://www.student.informatik.th-darmstadt.de/~aclauss/

I've looked at the English version of Alexader Clauss' homepage, but it has no specific informationa bout the ASH dial-up stack. The ASH page has no information in English. So I must wait for somebody to post something useful in this newsgroup, or for System Solutions to release the English version of the product (which I assume they will be carrying, as they do many of ASH's other products).

: Don't know about a new WEN Suite, but work is being done on a new STiK with
: PPP. They promise it will be faster ?

Yes. This has been promised so long ago, with no report of progress, I no longer wait for it. If it appears some day, it will be a pleasant surprise. Actually, I'm starting to feel the same way about the other products I mentioned as well.

1164. CAB 2.x Progressive Display of Page

Newsgroup: comp.sys.atari.st
Date: 1997-07-28 00:00:00 UTC
From: szhays@boris.ucdavis.edu
Message-ID: <5rif6geld2@mark.ucdavis.edu>
Source record: 119168

CAB 1.5 did a reasonably good job of progressively displaying web pages, allowing the user to scroll around end click on links, even before the page had finished displaying. However, CAB 2.0 seems to have lost this ability. Although the pages are still being built up as elements are downloaded, no mouse clicks are read until the entire page is finished loading. This is extremely frustrating! Particularly considering this was a feature of an earlier version of the software. Why should a program devolve?

Has this feature been restored in version 2.5?

Hi!

I have trouble with Screenblaster III Outside with The MagiC environment,
MagiC does not show the resolution choose menu under boot-up.

I use Stoop and when i choose 256 col resolution, I only get 640x480
'course the color depth and resoultion menu does not appaer. I have a
N.AES licence too since may 1996 and never had this problem with it.

Any ideas?

..possible a mail to Overscan will solve my problem.

Sounds nice, except I just barely got my ImageCopy 4.0 last
Friday, which was shipped the week before to Computer Direct
expressly for myself and a few others who had put an order.

Given I purchased a brand new program, FaST Club should have
sent Computer Direct the very latest, instead of dumping 4.0
upon us foreign customers....

FaST Club better offer free upgrades to those who purchased
within the last 2 months.

Do you have an external SCSI drive? CAF requires one, although I don't
believe it will bomb without one..

Do you have the fdi initialization program in your auto folder? You
will
need that to get it running.

That's all I can think of..

Most games require colour. Most word processors will work in colour (med
res). Calamus DTP, Cubase & Notator MIDI sequencers, are a few of the
programs which will NOT work with colour. There is a mono emulator
(SEBRA), with which you can run mono on a colour monitor, but it's dicey.

>With CAB 2.5 come a new CAB_OVL, that only work with ppp-connect!

As mentionned above in the thread regarding PPP-connect,
Mintnet and GlueSTiK can provide all the PPP one needs.

The CAB.OVL for Mintnet v1.81 is also the fastest and most
stable around. Even though I am personally involved in the
STiK beta-testing crew, I also needed PPP _right now_, and
I solved it by installing Mintnet with GlueSTiK.

Work *is* being done on both STiK and STinG to provide PPP,
but since I myself cannot wait for all the bugs to be found
(only one local provider still has SLIP: the slowest, most
expansive and buggiest provider in this town!!!), so switch
to Mintnet was achieved with excellent results.

That program CAN must does not have to display the file
while it's downloading. The issue is that the encoding of such file is
quite different to straight JPEG and JPEGD usually lauches 2 bombs when
it encouters one ;-)

Wensuite supports both format but for the progressive one
JPEGD is useless ....

>As mentionned above in the thread regarding PPP-connect,
>Mintnet and GlueSTiK can provide all the PPP one needs.

I have a couple of questions, of you don't mind...

1) Do you still have to allocate an entire partition of your hard drive to Mint?
2) How compatible is it? Will it run my Falcon games and demos as wells as the apps/utils?
3) Do you have to be a rocket scientist to install and maintain it? :)

Also, if you don't mind, can you list each file a user would need to install Mint/MintNet and CAB for PPP...and the places (ftp only!) where we can get them... Thanks in advance...! :)

<snip>

Hallo Helmut,

Thanks for your and Martin-Racine's reply. The e-mail bounced because of the "NoSpam" in my address. Sorry about that. I didn't find it at the ftp sites as I thought it would be in the MiNT folders with v1.12. Thanks again.

I must say that I'm using MiNT1142 with MultiTOS and it works great on my setup 14meg Falcon/Nemesis/NVDI. This may be a waste of MiNT, but I can open windows with CAB/STiK/NEWSie/Editors/QED/MDisk all online while running that crazy lines.app with no problems. So far, I've been unable to crash/hang this setup :) I'm running MiNT with memory protection/VM disabled. I'm not sure how to run VM or if it's neccessary in my case.

Intially, when I got my Falcon, I tried running MultiTOS/MiNTv1.0, but it was SO S-L-O-W and *very* buggy. Not so now...

I guess you could call this a "poor man's" multitasker. Now if I could only get CAB/CAB.OVL-for-MiNTNet v1.81? (Howard Chu's) to run without using the pppkit or MiNTNet partitions I'd be happy. The problem is finding a SLIP dialer setup as all use ppp. Loading GlueStik isn't a problem, but I understand THAT isn't the answer. I'm waiting for the English CAB2.5 and STiKppp, then and ONLY then will I get a ppp account.

Still SLIPping in Seattle,

Charles

P.S. I still think Surfer's should put their wwwcache in a RamDisk if possible. While switching from CAB1.5/CAB2.0 I created a set of folders 30 or more deep that was undeletable. If this happened on your HD, it would be a mess to correct. Possibly, needing a re-partioning. Same for unzipping/lzh unknown files that may be corrupted also.

Your DEF.ALL file could have become corrupted - mine did and I got a
large number of bombs.

Try moving DEF.ALL somewhere else on your drive and running CAF again.

THE ATARI ST QUICK FAQ
v1.4 - June 2nd 1997

In order to save bandwidth and avoid comp.sys.atari.st newcomers asking the same questions over and over again, here is a quick list of the most Frequently Asked Questions (FAQ) and, hopefully, useful answers.

http://www.geocities.com/MotorCity/2090/quickfaq.htm (USA) HTML version

or

ftp://ftp.sn.no/user/hallvart/atari/info/quickfaq.txt (Norway) ASCII version

If you don't have web or ftp access, send me an e-mail at the following address, and I will be happy to send the FAQ to you:

bales@garonne.stortek.com

This announcement is manually posted once every week.

Nick

Yes Gary,

get the just released 3.6b3 which is available in both English
and German on Oliver Scheel's own page. Joe Connor hasn't yet
updated his page with this one.

Similarly, 1ST-Guide was updated recently in June, but Joe is
still distributing the version from last January. I guess since
Atari Computing, things have been fairly hektik for him. *grin*

I've tried VM with MiNT114 a few days before, because I've got the idea
of using the free 24 MB partition for swapping (same as Linux). The disc
driver had to be informed to use the partition for GEMDOS and a GEMDOS
filesystem had to be build. Otherwise the swap space enabler (dosswap)
doesnt' enable successfully. But the system deadlocked on intensive use
of swap-space. I haven't tried MiNT1142 yet.

You could also use qed 3.97 english version. It's a very nice editor
which also supports OLGA and the so called kurzels.
It also offers a lot of features which Everest doesn't have.
I can't remember me where I've found my copy but you can probably find
it at the Belgian ftp site
193.190.205.13 archive/atari/incoming/editors/
You can also try 'sofa.dartnet.co.uk pub/atari/interactive'
I site contains lots of translated programs

Hope this help

Yes - use QED. It supports basic macros, proportional fonts, OLGA,
and lots more, and... IT'S FREEWARE!

He?
But you're not sure, ask uwe himself :)

If you use ahdi before, you can take hddriver without any problem.
All falcons first are use ahdi sice first factory test..
I'm sure that 98% of all germans how was use a falcon in this moment have kick out
ahdi after two weeks. (Most in the moment of connecting one or more external scsi devices)
:)

I can't remember me for one person how was lost data after replace ahdi.
Sure, if you made some bad experiments, you lost your data.
Same way as with ahdi. Watch the manual. ;-)

Before i get hddriver, i use hushi, ahdi or chbd only as test.
That was only a test phase. I replace any driver by an other two times in a week..

It's simple to replace ahdi with hddriver or any other ahdi compatible driver.
No trouble, anytime, but watch out if you have an old icd or any other
'homebrewed' device driver.

The best way for all:

Make a BackUp before, Make a BackUp before, Make a BackUp.. :) (Tree times) ;)

Regards, Robert

Ok...Here is the deal. I recently bought an Atari Mega ST computer from a friend who threw in all of his Atari books and software which I do not need. I have over 100 disks with various applications and games on them.

I have not tried out any of them. I assume they all work but do not know for sure. I would like to sell the whole lot in one shot in an "as is deal." If anybody is interested in making me any reasonable offer (plus the shipping) on them...they are yours.

Thanks!

Hi there,

this is an announcement of a new *Hall of Fame*, which will be maintained by Alan Strang. Its subject will be the classic *Stunt Car Racer* from Geoff Crammond and it will be open to players of the *Amiga* version as well as for the those who play it on the *Atari ST*. If you are interested in this Hall of Fame and want to know more about it, mail Alan (aws@thenet.co.uk) and drop him a note as he doesn't follow this newsgroup. You may also have a look at his webpage (http://www.thenet.co.uk/~aws/).

(I will forward any mails to Alan that reach me concerning this subject)

Be well,

: allowing the user to scroll around end click on links, even before the
: page had finished displaying. However, CAB 2.0 seems to have lost this
: ability.

I got my answer through e-mail, but thought others might like to hear,
this problem is easily solved by using the newest version of the CAB.OVL,
which is now up to 1.26 actually 1.2618, or something like that).

Yes, there is a new CAB OVL out there. And this one makes a number of
improvements. Another complaint I posted here some time ago was an
inability to visit some sites (e.g. www.hotmail.com). This has been
improved, as I was able to visit hotmail (for what its worth). I'll have
to try the search engines next and see if I can get to the second page of
a search (e.g. www.altavista.digital.com).

Another thing I notice is the display line is now even more loquacious,
telling me of all sort of timeouts that probably I had been induring all
along without knowing. Now, I wonder if I can use this information to
fine tune my STiK configuration to reduce these timeouts, or if these are
just a sympton of Internet traffic and are beyond my control.

> It depends also if you move the mouse or not.
>

On my Falcon (HSMODEM, Power-Up, Blow-Up Hard 1) I found the max
sustainable with ~800x600 4 colour screen was 57,600BPS.
(115,200 was just beyond reach with the odd dropped character).

Since I had the Afterburner fitted I have not yet gone to enlarged
screen, but I can use 115,200 in 640x480 x 256 colour mode.
[It's just as well as I have just flashed my Courier modem to the X2
standard, so I needed that speed.]
(That is with Nemesis turned off)

This OVL is not actually publicly available yet!! It is still in beta test
phase. I can just see the flood of postings now saying where can I get hold
of this version. :(Simple answer is you can't. Yet.
Unless Dan has released it, which I'm pretty sure he hasn't yet.

>Yes, there is a new CAB OVL out there. And this one makes a number of

See the above comment. It *isn't* out there. Yet.

>improvements. Another complaint I posted here some time ago was an

The latest beta works very well on my system with search engines.

I'm sorry but this URL no longer works. :(

It hasn't worked for a couple of months now. Which is why I still have
version 2.4.

Please can you tell us the proper URL for your pages please Petr.

BTW, does 2.6 fix the VA_START bugs under MagiC?

I agree totally on this point. Once Dan has got a really stable OVL ready, I
think this should be the next thing to look at.
Interlaced GIFs certainly. And maybe progressive JPEGS although they are
probably much harder! Interlaced GIFs are much more common.

Source record: 119087

Hi there!
I'm about to test a C-lab Combiner (4-way slot expansion) with the Falcon, but there is a small problem.
I guess I need a program that switches between the different key-slots. Cubase Audio searches all the slots and stops where it finds the CAF key, but neither ZeroX or AudioMaster work in other slots than the pass-through slot (slot1).
Prevoiusly I've owned a Steinberg Midex+ and I remembered there was an ACC that switched between key slots when the programs didn't scan themselves, so I suspect that a similar program is available for the Combiner. Yes - I did try the Midex program but it didn't work...
Please help me by mailing the program that I need asap to me or direct me to an ftp site where I can find it.

Thank you in advance for your help.
Best regards,
Claes

Well, Flinny put it on his page, so I assumed that meant it _was_
released, as his page is the de facto standard. I also put it up in the
US on the Yolo Atari Club ftp site. Hopefully that will prevent a flood
of posts asking where to get hold of it ;-)

1218. TT030 & Mega STe for sale

Newsgroup: comp.sys.atari.st
Date: 1997-07-30 00:00:00 UTC
From: Rudy Sennema <rsennema@execulink.com>
Message-ID: <01bc9cae$e0df3ba0$b7a1d8cf@rudy>
Source record: 119092

Hi All,

I hope this is the right place to post a for sale? I see other's here.
I have a TT030 with TOS 3.06 for sale with:

o ET4000 card & NVDI for ET4000 (SpeedoGDOS)
o SpeedoGDOS 5 (I like NVDI better though)
o CaTTamaran board - 48 MHz
o 2 meg ST and 8 meg TT ram (GE soft TT ram board)
o 245 meg Maxtor hard drive (Internal)
o Golden Image Hand Scanner, Interface and TouchUp software
o Calamus 1.09n
o Outline Art 3.0
o Geneva & NeoDesk 4
o LDW Power
o Atari Works-No Manual, No original disks
o STraight FAX!
o Cardfile 4, STalker and STeno
o Extendos
o Genus font editor
o Diamond Back 3 and Diamond Edge 3
o ICD Pro Utilities
o Kobold File Copier
o Image Copy 4
o External 1.44 Floppy (also 1.44 meg built-in)
o Xboot 3
o Flash II ver 3.02
o EVERYTHING CodeHead ever wrote
- Almost NONE of it likes Video Card though...
-works OK in standard ST modes though....
o 1st Word Plus (TT version)
o Calligrapher Gold
o MegaPaint II professional
o EasyDraw
o Everything is still installed on the hard drive and ready to go
o GFA Basic, Turbo C, Mark Williams C and a bunch of
Atari programming books and stuff.
o a HERD of mice's and joysticks and games
o All have original disks and manuals.

I'll let it ALL go for $1,200 Canadian. It is a VERY reasonable deal.
That's only about $900 US.
Buyer pays shipping.

I also have a 4meg Mega STe with 1.44 Floppy, 1.44 Meg External floppy, TOS 2.06, the 1.44 meg Ajax chip upgrade, the internal Hard Drive kit/interface (no hard drive out though), 14" FLAT mono ATARI monitor (the GOOD one), two 12" Colour monitors and a Monitor Master. It would also include an ICD Link, ICD utilities and an ICD AdSCSI Plus board and ToadFile case (no hard drives) plus an extra set of TOS 2.05 ROMS.

I want $500 Canadian (about $350 US) for the Mega STe complete. Take both TT and
Mega STe for $1,500 Canadian (about 1,200-1,300 US.)
If you think I'm being unreasonable, make an offer.....

I also have the following programs that I am thinking of keeping. I could be
persuaded though:
o Avant Vektor and Convector Professional
o Papyrus Gold (version 3 I think)
o Calamus SL

I am in London, Ontario, Canada. Please reply in e-mail.

Thanks for your interest,
Rudy Sennema

>

Of course, in my suggestion the limitations you talk about were implicit. But TOS 2.06, for example runs on all ST/STEs. I'm not sure if TOS 1.0 will run on an STE however.

Basically
1.00, 1.02, 1.04 should run on any ST, STF, STFM, MegaST (maybe STE too, but without accessing the STE hardware)
1.06, 1.62 should run on any STE
2.05, 2.06 should run on all the above, plus Mega STE

A TOS loader program could be very useful, for example, for STE users who have TOS 2.06 roms and would like to load the old TOS 1.62 for some games.

Another use could be to change TOS nationality, or TOS versions for beta testing. I can see many uses for a multi-purpose TOS loader program.

>MagiC has to do a complex job: detecting on which hardware it runs and then

>worked with the Falcon-hardware.
>

Detecting hardware is not difficult. Many programs do it already. Then you just have to check that the TOS you want to load is compatible with the hardware you're running on. Relocating TOS to a different address shouldn't be too hard either.

As I've already said, I'm not a programmer, but I'm quite sure a program like this is a lot easier to do than a web browser, a PPP connection program or a DOOM clone.

If Pacifist can do this, then why can't a real Atari machine ?

Very nice program. I love the flexibility, and yes, it does work very good in
true color.

However, am I missing something, or is there no way to "shut if off" without
actually deselecting the appropriate buttons? It would be nice if there was
some type of easy toggle.

Thanks for the tip!

Don't use 1stGuide. Yes, I do think Joe is kept rather busy with Atari
Computing. He's busy arranging reviews for XURL (next issue) and POPwatch
(issue 7). :-))

Yes, MTU through the new server is 1524.

>is all detailed there.

Yes, the new ovl works much better. I did read the docs, and setup the
CFG file as above. The HTML is a proxy and the ftp is a
proxy, but on different gateways (nameservers). The problem is that
only one nameserver (gateway) is recognized in the STiK config file
(as far as I can tell).Putting the second (ftp) proxy in the ftp proxy
address isn't recognized, only the nameserver. So I can have one working
or the other, but not both.

> monochrome ??

Have a look at the ST FAQ (Freq. Asked Questions) - if you have a web browser try http://home.sn.no/~hallvart/pages/atari.html & follow the links, if you have FTP try ftp://ftp.sn.no/user/hallvart/atari/info/

This also tells you where to find PD games & applications.

If you don't have HTTP or FTP then email me & I'll send you copies.

As a quick answer: Most games do NOT work in monochrome. If you're planning to do lots of word proc'ing etc then a stable monochrome monitor is best - a compromise being a multi-sync type, of which you'll find details in the FAQs.

Subject: CAB.OVL v1.2618 wins the Prize!
X-Newsreader: NEWSie Version 0.79 (Falcon)

Well, what can I say? The new CAB.OVL seems to have solved the 69 byte ACCEPT-ENCODING Error that has been a problem for me for many months. I posted a message that if anyone could solve the problem for CAB/STiK users (me) I would buy them dinner for two at a Steak House.

I assume this is Dan Ackerman's OVL. If so, please let me know where to send the check, as you certainly deserve it! It's not perfect, but it's good enough to win the prize. It works well with CAB v1.5/2.0a on my Falcon. Anyway, I'm happy to see that this problem has been solved for Surfer's such as myself.

Regards,

Charles

I have a nice bigscreen TV...any advice on getting my Falcon to work
playing games on it? Must don't 'cuz of a frequency difference I guess
(European games, maybe?) - in any case the picture is flipping by. These
are the same games that work on my SC1224 or my SVGA monitor. Dynabusters
is the main one I'm thinking of.
Is there any alternative device to get TV output (SVideo? RGB seperator?)
or perhaps a software patch to match frequency?
thanx,
phil

Hi Martin-Eric

This is starting to become a drag :(

There is no sign of a new Everest on the URL below. Which is indeed Oliver Schmidt's page. His pages contain absolutely bugger all!! A picture of him, 2 lines of text telling you that Everest is a text editor.
No downloads section at all :(It's been sometime since I've since such a poor web site with *zero* content!!

I wouldn't mind and would go off and get QED, but I registered Everest at 15UKP or whatever ages ago. I would have thought some sort of support might be forthcoming? Even if it's just an email telling me there is a new version and where to get it :(
I registered it through Joe Connor. Maybe I ought to email him and ask him.

Gary

Has anyone got this TTF font (from http://www.bitstream.com/) working?

I wanted to use it with Papyrus and NVDI4.11R3, but when NVDI scanned
the font it reported what I take to be a checksum error:
font damaged: (head: c12e6465 != 53466f78)

It may be a memory problem? The uncompressed font is >13mB in size -
though as my Ab040 has 16mB of fast ram I would have hoped that NVDI had
enough memory to handle it.

[Incidentally, anyone getting the font from the bitstream site - you
should only need the original 'western' font. They are all supposed to
contain the same characters, but the asian versions have some subtle
internal id change as otherwise Windows95 doesn't pick up the desired
asian font.]

There is no risk of losing data. Simply install the driver as the
instruction says. There is not much to say about it. You only need to
use the "Install HDDRIVER" option.

I wonder if anyone knows of any astrology progs for the Atari. I've had a good trawl around, but can find absolutely nothing on any ftp site!

I already know about Astro22, Astrolog and Andy Osborne's Astrology. I'd particularly like to know more about an astrology/biorythm prog called Life Programme which I think was a commercial German programme published in 1987 and then translated in Dutch (and then partly into English). The demo I have is version 6.4.

Any possible leads would be welcome.

Andrew Harvey

This URL is correct. But there can by some problems with the name of
html file. I will look at it.

But I think that some WWW browsers works well (lynx, netscape).

> BTW, does 2.6 fix the VA_START bugs under MagiC?

I have changed something in VA_START routine. Can you tell me about this
bug something more?

1242. help with CAB

Newsgroup: comp.sys.atari.st
Date: 1997-07-30 00:00:00 UTC
From: ws96ag@badger.ac.brocku.ca
Message-ID: <5roauc$if5@butler.ac.BrockU.CA>
Source record: 119116

Hi, I was wondering if someone could help me. I am using CAB 1.5 & STinG
to get a slip connection through my University. Recently they have
introduced being able to register through the Internet for my courses.

I tried accessing the site, which by the way is:
http://clearpatha1.ccs.brocku.ca/http/docs/cgi_lib/brock/birt.html

Unfortunately, when I use CAB 1.5 (or my lynx browser via a local
FREENET)
to submit a form (my ID number and PIN) I get the same response back:

INVALID/EXPIRED WBIRT FORM.

(Wbirt by the way stands for WEB Brock Info. & Registration by telephone.)

Is it possible that the university's software LOOKS for Netscape or
Microsoft Explorer??? I've tried both on MACS or PC's and it works.

Is CAB 2.0 any different with its form submission routines????
Can anyone help?

1243. Q: formatting HD-partition: which software?

Newsgroup: comp.sys.atari.st
Date: 1997-07-30 00:00:00 UTC
From: marcl@solair1.inter.NL.net
Message-ID: <5rni01$sel@solair1.inter.NL.net>
Source record: 119117

During heavy testing of the new CAB-version, one of my Syquest removable
44m-harddisk partitions crashed. I need to reformat the partition, because
the boot-parameter-block (BPB) is ruined. The HDX-formatting prg. of Atari
is not usable, as it wil reformat the complete harddisk, instead of only
one partition.
Which sofware will let me reformat only one partition of my
HD? Thanks for info.

Marc.

Modem For Sale:

Diamond SupraFaxModem 33.6- modem is brand new from the factory. It was sent to me directly from Diamond Multimedia/Supra via warranty replacement for my old 28.8 SupraFaxModem.(I couldn't wait for the replacement to arrive so I bought another modem and no longer need this one)
This external modem will work with any Atari or Pee Cee computer. It has an LED display, unique for a modem, which gives you a digital readout of the modem status. It is still in the factory sealed package and comes with a 5 year warranty, warranty card included. This modem is upgradable with software, Flash ROM. Includes Supra modem cable, manuals, power supply and box. Sells for $169+ in local PC store, asking $100 + shipping. US & Canada only. Pay by check/M.O. or COD.

>>Of course, the integration between the two could still be improved...

>It definitely could.

I of course agree 100%. I've discussed with Alex a couple ideas for
improvement. As for progressive rendering, I can get that today, using
MiNT and MinixFS. It's a pretty twisted approach, but it works. With my
cache directory set to a Minix filesystem, I create a named pipe instead
of a regular file for the item currently being retrieved. Then I tell
CAB that the file is already available. In the meantime, the OVL reads
the data from the network, writes it to both a file and the named pipe.
When CAB opens the "file", it instead gets the pipe, and so reads the
network data progressively. When the item is completely retrieved, the
OVL unlinks the pipe and renames the actual file into place, so it is
properly preserved in the cache. This trick allows large text and html
documents to be rendered in real time. I don't see any gain with images
since they have to be dithered before displaying on my monochrome screen.

Features I'd like to see:
A formal interface for progressive retrieval.

A function that retrieves a list of URLs. This would allow the
OVL to begin downloading all of the images on a page all at once,
or to use a single connection (using HTTP 1.1) to obtain a bunch
of images, etc. And of course, the results of this should be
progressive as well.

A flag to indicate whether the URL to retrieve was manually
entered, or was referenced from a previous URL. This would allow
the OVL to use the HTTP Referer: header.

Unfortunately the progressive interface probably is not going to come any
time soon.

Good for you. Yeah, I run that lines.app to chew up idle cycles too. It's
a good way to tell if you're waiting because the network is slow, or because
the CPU is busy...

>I guess you could call this a "poor man's" multitasker. Now if I could
>only get CAB/CAB.OVL-for-MiNTNet v1.81? (Howard Chu's) to run without
>using the pppkit or MiNTNet partitions I'd be happy. The problem is find-

>but I understand THAT isn't the answer. I'm waiting for the English CAB2.5
>and STiKppp, then and ONLY then will I get a ppp account.

I don't understand what you're talking about here. MiNTnet works with a
variety of network drivers, and has nothing to do with partitions. In
particular, a single serial IP driver supports both SLIP and PPP. I have
used both in the past, although I only use PPP now. Also, the OVL-for-MiNTnet
is exactly that - it won't work with any other network stack. One advantage
of using a socket-based interface is that network software for Unix systems
ports over without any effort. I am currently testing a new version of the
OVL which includes Secure Sockets Layer support (using Eric Young's SSLeay 0.8
code base), among other things. This OVL allows me to connect to secure
web servers, do secure credit card transactions, etc... It will be a long
time before anyone ports an SSL implementation to STiK, I think. For me, it
just took a couple hours to unpack the Unix source code, review the config
and Makefiles, and build. The socket interface also allows you to arbitrarily
connect other programs to the network as well, using regular I/O redirection.
This is what makes it so easy to support gzip decompression on the fly - the
OVL just spawns your gzip binary to handle the actual decompression.

>P.S. I still think Surfer's should put their wwwcache in a RamDisk if

> for unzipping/lzh unknown files that may be corrupted also.

I went that route initially, but I decided it was a waste of RAM. Also,
on an ST with only 4 MB of RAM, I wouldn't use a RAMdisk at all. Maybe a
couple hundred K for disk cache, but not dedicated RAMdisk.

I got that program, it's released by BIO Systems, Hansjakobstr. 122. 8000 Munchen 82.
It is the old adress, from around 1990 when I got it, don't know about
the new postkode etc.
I got the old phone number and a fax number.
Tel: 089/431 33 26
Fax: 089/431 35 00
They are proberly still there. They made this program availabel on ATARI ST, Amiga
and for the PC.

According to my former girlfriend it was very god at making a kind of startabels.

The ST version is easely translated from German to any other language. I did it
from German to Danish. Just make sure you make a exact copy of the system disk,
or it will only run as a demo.

cheers

Hi All,

I am not very good at remembering things I have
to do and I depend on my 'Lotus Organiser' on
my PC at work to prevent me from forgetting my
daily tasks.

I was wondering if there was anything similar
for the Atari. I need an organiser program
that has at least a diary and 'to-do' functions
and perhaps an alarm function etc.

So does such a thing exist?

Thanks,

Ben Hills.

1256. CAB 2 with OVL 1.26

Newsgroup: comp.sys.atari.st
Date: 1997-07-31 00:00:00 UTC
From: szhays@boris.ucdavis.edu
Message-ID: <5rqljt$c70$2@mark.ucdavis.edu>
Source record: 118986

I now have my commercial copy of CAB 2 and have installed the new CAB OVL (version 1.2618), and I have to say, I'm pretty happy with the whole thing. Like a kid with a new toy, I've been doing my best to break the combination, and haven't had too much success ;-)

Pages once again are browsable as they load. So, although _images_ still don't load progressively, the pages themselves do!

I haven't had a chance to try it on the site Gary Priest had trouble with: http://www.stud.fee.vutbr.cz/~xsumbe00 but hitting that site with Netscape I had trouble because the site's server seemed to be unhappy that my browser was configured for a different character set than its pages had been created for. I did eventually get into the site, but I suspect this might be the cause of the trouble Gary was having.

As was pointed out earlier though, this new OVL seems to have solved the problem where graphics from certain servers refused to transmit. So, e.g. http://www.wizztronics.com now works fine.

Also, using search engines now allows the display of second and etc. pages.

However, a bug I noticed (and had noticed it with the earlier OVL as well, but hadn't gotten around to mentioning it in this newsgroup) is that when using the "Back" button from, for example, the third page of an Alta Vista search, takes you all the way back to the first Alta Vista page (the one you entered your search words into) rather than back to the previous "list of ten." This seems to be the case for _all_ pages that were the result of a CGI form query. Going "back" always takes you all the way back to the CGI form page. I assume the problem is another of those "left hand not knowing what the right hand is doing" things where CAB and the OVL are not cooperating to pass the stored form data along with the stored URL.

One thing that frustrates me in CAB is how slow updates to form contents can be. It gets to the point that, typing into large fields, I can easily get ahead of CAB and chracters will get dropped (this on a Nemesized Falcon). Also, as long as CAB is drawing its own scoll bars, why not make them a bunch thinner, like half as thick as they are. On a page full of frames an inordinate amount of screen space ends up going to scroll bars.

I have had no problems with any of the OVLs. I have NEVER had proxy
turned on so I strongly suspect that this might be the reason.

I'm interrested in getting copies of the TT030 scematics
and field servicing manuals, or any other docs related to
to TT hardware.

While the manuals are still available from B & C, $50 US
comes out too darn expansive for a Canadian.

Since I know several user groups have copies of various
Atari schematics, surely someone within North America can
arrange for me to have at least xeroxes of those?

Atari themselves don't have anything left. Looks like the
legacy is truely gone....

You mean to tell me Atari EVER had schematics - with all the floating changes they made on their strangely fine machines, I know of no one that ever new about all of the 'fixes' that were made from motherboard to motherboard !

There are comments to this message.

TITLE: Another one
I have a 4 meg Atari STe with a 127Mb hard drive and I have been using Protext 4.3 for some time. I upgraded to Protext 6 a few months ago with no problems, however the other day the file selector went wrong. It works OK to load a file after start-up but if I then "Save As" using the file selector the program crashes. The selector shows part of the path in the top line and a garbled version of the path but not the file name in the file selector "Name" box, then it locks up and a few moments later the screen turns into an allover pattern. I use Harlekin II and Teradesk so this first happened with the Harlekin file selector. I have tried rebooting with no accessories at all and without Teradesk - the garbage still appears with the Atari file selector but at least it doesn't crash. It doesn't happen in other programs such as Timeworks or the Harlekin Editor though. I have tried using a different copy of the Protext program but it still happens.

Shortly before it went wrong I had created a new sub-file in Protext by using the "Make New Directory" item in the menu line but whether that caused it I don't know. Have you any ideas how to put it right?

Incidentally, I use Superboot and even when I disable Harlekin on boot-up the Harlekin wording appears on the first screen, why is that? And yes, I've tried Protext without Superboot too, no difference!

Regards, Derryck

g>
g> Pre-STE machines would theoretically allow you to have up to 15 megs
g> 640k or simply put "15 and 5/8th megs of RAM".

Interesting message, thanks very much.

My STFM has a MagnumST card (with an 8Mb PS/2 SIMM) and it works very well,
however you need either TOS2.06 ROMs to plug into it and/or MagiC to allow
the extra memory to be recognised - versions of MagiC below 5.11 have a
problem with floppy disk access when used with this board.

The board has its own MMU chip onboard, that plus a couple of logic chips
seem to be all that's required to endow the ST with the additional memory
-you can add up to 14Mb plus 2*512Kb blocks with a 4Mb ST and a 16Mb SIMM.

Speak to 'ya later!

Actually, they did. I have friends in Sweden who have schematics
for nearly every Atari motherboard revisions (including some STF
boards that supposedly never existed). The schematics have been
produced, only some minor revisions were not distributed.

FYI, my friends got theirs through former Atari Sweden employees.

Well, it doesn't work with CAB2 and OVL1.2618 :(
I can't try it with Internet Explorer until I'm back at work next week.

Anyone else managed to get this URL to work? Or is it just me?

>> BTW, does 2.6 fix the VA_START bugs under MagiC?
>
>I have changed something in VA_START routine. Can you tell me about this
>bug something more?

Sorry. I thought someone from the stik beta testers had registered NEDPlayer
and reported this bug. They told me that you were going to get in touch.
Basically, NED Player crashes if called repeatedly via VA_START. ie. If I
call NED Player from POPwatch2.1. After about 6 or 7 calls it crashes!
This is under MagiC5.11.

1283. Sonolite demo prob. solved!

Newsgroup: comp.sys.atari.st
Date: 1997-07-31 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <870340052_OASIS_@pcc-uky.campus.mci.net>
Source record: 119013

Okay, I've been exchanging E-mails with Tat of Avena, and we (well, he did mostly!) finally worked out why their Sonolite (Sonoluminescence) demo would not work on my Falcon... Its incompatible with ICD's Pro hard drive utils. From Tats' suggestion, I copied the 2 necessary files (SNL.LNK and SNL.PRG) to floppy, then booted up, holding down <alt> to bypass everything...it did work fine then...! Great demo, BTW... All I can say is "Thanks, Tat!" for being very helpful with this problem...Nice to see that...! ;^D

1284. Browser Wars

Newsgroup: comp.sys.atari.st
Date: 1997-07-31 00:00:00 UTC
From: szhays@boris.ucdavis.edu
Message-ID: <5rqjhi$c70$1@mark.ucdavis.edu>
Source record: 119014

For those who felt left out of the browser wars that are occuring on the PC, apparently we have our own little skirmish brewing right here on our own small platform.

WEN Suite has now been officially released (I got some e-mail from oxo today) at version 2.01e, and can be ordered from:

oxo systems
3-5, rue des Varennes
F- 89160 LEZINNES
Phone: 00 33 - (0)3 86 75 60 30
E-mail: oxo@imaginet.fr

Only the French language version is available, although an English version should be done in a few days.

Now that the copy of CAB 2.0a I bought has arrived, as soon as I get my copy of WEN Suite I'll run a little comparison (if I can get WEN Suite to work, I couldn't get the 1.70K version to connect to the Internet, it had very impressive speed offline compared to CAB offline, although HTML support wasn't as strong this is one area I hear it has been improved in).

CAB 2.5 has its own TCP/IP stack that suports PPP, as does WEN Suite. CAB also supports STiK and STiNG, I don't know if WEN Suite does or not (hopefully it will, this was implied in early screenshots of the program, but was not the case of the demo version 1.45 and 1.70), the message I got did not go into detail on that.

Please do not construe this message as an endorsement of any particular product. I plan to own both browsers. I'm just happy to see some choice in the Internet arena and hope that both ASH and Oxo eventually feel that their efforts have been suitable rewarded.

I have upgraded to a TT so have the following Atari ST kit for sale.

Please add postage/carriage.

Microvitec CUB (1431MS) RGB monitor. Set up for analogue video with added external Brightness control. ST cable. Hardly used but small scratch on screen. 40UKP

ICD AdSCSI Plus host adapter. Cable, manual, s/w. 20UKP

Mono/colour monitor switch box. 5UKP

STM "Brick" power supply. 20UKP

The following are best taken together as a basis for a serious ST configuration.

****

Farnell Power Supply 20UKP

STM, TOS 1.4, 4Mb RAM. 38k4 Serial and Overscan modifcations (both switched). Mouse. 100UKP

NEC 720Kb floppy disc and cable. 10UKP

SM124 mono monitor. Fitted with more highly rated components and adjusted to larger display. 40UKP

Metal case containing host adapter and ST277N HD. DMA cable. Space for 2 5.25in. SCSI devices. I think the HD is u/s as it will not go "Ready" hence 20UKP

E-mail or ring 0161-428-6761

****

Sorry to hear this.

As far as I know, NO s/w will allow partial reformatting. In SCSI
terms it's a "global" operation.

You MAY be able to retrieve a usable partition if you try to "zero" or
"initialise" that partition only. The ICD software allows this
(ICDFMT) - you can just "Write partiton Info Only" or you can use the
Utils to clear and Initialise.

If you wan't me to read any response from you, do not respond here,
Direct all responses in E-Mail to: bensmith@teleport.com

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

I've added more Items to my Catalogs, such as several large boxes full
of Atari ST Software. All of them Complete in Boxes with Documentation.
Some are still UNOPENED and SHRINKWRAPPED. As well as an Atari SLM 124
Mono Monitor with a Built in Monitor stand and an Atari Laser Printer.
For the Classic Atari 8 Bit Line Added Hardware was a U.S. Doubler Disk
Drive plus a modified 800xl with a built in Translator on a switch that
will run older Software without a Translator Disk Plus Lots more new
8 Bit Disk SoftWare for $5 each.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of
Shadow Software. Older Technology made with a lesser chance of Planned
Obsolescence. Built like Tanks. The Shadow tells me each one worked
before they were taken off their Computers. Each one, $25, as is. Model
numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for
Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST
HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may
find something you've been looking for. Something you might want. Even
Something you may of Forgot! At BSC's Web Site you can View, Capture &
even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request
Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why
not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or
Feel free to Request catalogs through E-Mail. Really, it's no inconven-
ience. All I ask is that you specify Atari 8 Bit, Atari ST or both.
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I
will get back to you after the weekend. Please let me know if I can't
attach files to your E-Mail. Please Direct any and all Replies Through
E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in
Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC
Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow
Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer
Platform. Also from The Shadow of Shadow Software (my Boss) a File

called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

Hi There

Most of the problem withe the forms is the ovl file for cab. Some
versions work properly some dont. With Cab 2 get the latest ver which
just came out this works perfectly.

1295. Re: Bitstream Cyberbit Unicode font

Newsgroup: comp.sys.atari.st
Date: 1997-07-31 00:00:00 UTC
From: Howard Carson <lrhc@interlog.com>
Message-ID: <01bc9d57$d0c7c580$ceec22cf@user>
Source record: 119126

The CyberBit font from Bitstream is a Unicode font. Whatever software you're using to load it on the Atari cannot possibly support Unicode language mapping. that's why you're ending up with a lot of garbage.

Unicode applications such as Calamus publisher v2 for WinNT 4 (this version of Calamus is now in beta), other NT applications such as Word 97, Internet Explorer, the next version of Netscape and a very long list of other applications, are all now Unicode based. They are able to match any language space in a Unicode font (which may contain dozens of different alphabets mapped into Unicode standardized spaces), format the language using an appropriate IME (Input Method Editor), or, like Calamus v2, use their own rendering engine to write to the screen/printer/file, as necessary.

Atari software doesn't understand Unicode font mapping, or any of the glyphs embedded in any of the Unicode fonts.

You can use Diamond Edge (commercial) or Knife ST I think.
I think KnifeST was included on a reader disk along time ago
and it may be freeware now. I'm not sure though. I guess
there are others as well

From: DCroker@fortress.org.uk
Message-ID: <629_DCroker@fortress.org.uk>
Source record: 118882

Nostrodamus phrophesised this from david@columbia.edu to All...

Hi David!

d> Any info (pinning, how to use pc floppy with easy to follow
d> directions) would be much appreciated. Thanks in advance for any
d> responses.

I don't know the STe, but the ST has what looks like a ribbon cable that
would be easy enough to replace, rather than repair.

It could be that you've fried the drive controller tho', have you a drive
that you could plug into the driver B socket on the back and see if that w

Hallvard has a file on his web site that might be of interest to you,

Message-ID: <199708011129.a35531@kr.maus.de>
Source record: 118883

Hi Harry, hi Michael,

HS>I was very surprised to find that the CPU mc> benchmark was under
HS>100% (about 70 something).
The maximum processor-speed requires the following:

both caches turn on
no accessories an tsr-progs booted
european rgb-monitor or tv-set (because of 50 Hz)
screen res: 320x200x16 or 640x200x4

Hi Peter,

PR>and there is no provisions for bank switching inside TOS. So sure you
PR>can cram 32 MB into an ST, but you won't be able to use more than half
PR>of it.
Righty right :)

In opposite to the situation on falcons, where the fx-cards drivers realize
bankswitchen with the help of the 68030 pmmu, there's no chance for
bankswitching on sts.

PR>> They are certanly not. There is a card out now that gives your ST,
PR>> STE 32MB RAM !
There might be a misunderstanding, because the PAC030/FRAC-combination offers
these amounts of memory - but it's tt-ram accessed by the PACs 68030 processor.

cu,

MArk

1307. MagiC 5.11 questions

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <5c0_9707312154@ronly.org>
Source record: 118932

I have some questions about MagiC 5.11. Any input will be appreciated.

o What happened to the v5 manual? It came with a v4 manual and no update docs (except for a short readme, talking about VFAT). Not very professional.

o Is there any way to autoboot a program in parallel, such as Semper? I know about #_AUT, but that's not what I want.

o Is there a function, such as on the Mac, for cleaning up the desktop and neatly aligning all the icons?

o MagiC apparently boots in ST-Med. Is there any way to change that? I don't mean the desktop, but for the AUTO folder loading/display.

o I only have one parition set up so far for long filenames. Sometimes the file selector uses short names on that partition and sometimes it uses long names on my other partitions. Is this a known bug? Will it go away if I go to long filenames on all partitions?

o Any way to save the sort mode (e.g. Type) in the file selector?

o Is there a freeware/shareware solution for adding/changing icons? I know about Interface and it's a great program, but I can't afford it right now.

o Is there a boot manager which directly supports the MAGX.INF file the way Stoop supports NEWDESK.INF? That is, change the screen size and colors of a single file instead of keeping a separate file for each resolution?

o Does SAM not work with MagiC or is it just me? I get the startup sound, but nothing beyond that.

o And finally, what is <frei> in the application manager and why are all those extenders assigned to it? Can I delete, say, the *.CP? extenders and reassign them to Cops?

* LED v1.51 * For a good time call 702/736-2282!

1308. Mysterious ST Prototype

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970801062700.CAA16376@ladder01.news.aol.com>
Source record: 118933

Hi,

Several weeks ago on a trip out to California I stumbled across a true find. Its a case for some sort of prototype of an Atari ST, the case is described as follows:

A Mega ST type case, except twice as wide which sits ontop of a dark grey (Atari Portfolio grey) pedestal with an RJ-11 jack in the front and a power button next to it. There are no marks, no writting or labels, nothing. This sucker is HUGE.

Did anyone ever see a case like this at any Atari show or in any Atari press release. As yet, this is an unknown to me and I wish to know what it is so I can catalog it.

I appreciate any and all help.

Curt

1309. Giving away Atari Computing!

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <870402026_OASIS_@pcc-uky.campus.mci.net>
Source record: 118934

Okay, a short while ago, Rich T. of Atari Computing posted a message about needing a few more subscibers... Well, I've been thinking about that, and I'm going to try to help. First of all, I'm sending my subscription in on Monday. 2nd, I'm going to use my BBS (see Sig below) to help. I'm going to pick one Atari caller at random each month, and give them a -free-- 3 month subscription to Atari Computing. What does it take to qualify? I don't want anyone to run up a long distance phone bill, so it will only take 1 phone call a month-even if you just logon, take a quick look around and logoff. I'm also challenging all the other Atari Sysops to equal this offer...! :)

The first winner will be announced at the end of August, and the end of each month thereafter... Long live the Atari spirit...! :)

: >As mentionned above in the thread regarding PPP-connect,
: >Mintnet and GlueSTiK can provide all the PPP one needs.

: I have a couple of questions, of you don't mind...

: 1) Do you still have to allocate an entire partition of your hard drive to
: Mint?

No. MiNT itself is only about 200K in size, although by the time you add MiNTNet this may grow a little.

Some people think that MiNT requires a whole hard disc partition to itself, because a full UNIX style installation does really require a better filesystem than the usual GEMDOS filesystem - which usually requires changing over a whole partition.

If you only want to use MiNT for connecting to the internet, and don't want all the more advanced features, then you don't need a complete UNIX style system.

: 2) How compatible is it? Will it run my Falcon games and demos as wells as
: the apps/utils?

You should not have any problems, since MiNT is (AFAIK) fully compatible with TOS. Of course you may have problems if the software you use is "illegal" in any way (I delete such software from my disc) but I have never had a problem.

: 3) Do you have to be a rocket scientist to install and maintain it? :)

If you want a full UNIX system then naturally you will have to understand UNIX to be able to maintain it (not that this is very difficult once you understand a few basics). If you only want a basic system to access the internet without any advanced features, it is quite straight-forward.

: Also, if you don't mind, can you list each file a user would need to install
: Mint/MintNet and CAB for PPP...and the places (ftp only!) where we can get
: them... Thanks in advance...! :)

For a full UNIX system you should probably use the excellent KGMD distribution (with KEMD - the English version).

For a most basic system that just has the essentials for accessing the internet via PPP, you could try the PPP-Kit distribution.

>but i am quite good with the soldering-iron so please help me get my
>HD (SCSI) connected to my computer. Peter

Most host adapters use their own custom chips, Peter, this is why they
are not usually considered as DIY projects. I have never seen a
diagram using off-the-shelf components.

Yes. The cost of new h/a's is frightening. Are you sure you cannot
survive with a second-hand one? These apear from time to time as
people upgrade from ST to Falcon or TT (which have integral SCSI) -
they then find they have a h/a spare as they can connect directly to
their existing SCSI devices.

I had a couple for sale only yesterday but I believe they are spoken
for now.

1315. FS: Atari games/books + Gameboy/Lynx carts

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: cronos@worldaccess.nl
Message-ID: <N.080197.133600.03@wxs1-14.worldaccess.nl>
Source record: 118940

This is the July 1st version of the list of Atari stuff that I have
for sale.

ALL THE TITLES BELOW ARE ORIGINALS, PRE-PROD COPIES, OR EVALUATION
COPIES (so you might not be able to upgrade all utilities).
NONE OF THESE TITLES ARE PIRATE COPIES!

FIRST CATEGORY: GAMES FOR ST, WITHOUT MANUAL, WITHOUT BOX

Games with + are excellent games that I've played for hours and hours...

+Airball
Airball Construction Kit
Arena (2 disks, Psygnosis)
Backlash (Paul Woakes, Novagen)
+Barbarian (2 disks, Psygnosis)
Black Lamp (Firebird)
+Blood Money (2 disks, Psygnosis, bloody excellent game)
Brattacas (Psygnosis, classic hi/med res game)
Deep Space (2 disks, Psygnosis)
Extensor 3.3 (Tron-like game, monochrome only, by Golden Games, ancient)
+Formula One Grand Prix (excellent game, 3 disks, includes manual that you need
for the copy protection - passwords)
+Goldrunner II (boot/game disk plus data disk, by Microdeal, 2 disks in total)
+Goldrunner II Pete Lyon data disk
Goldrunner II some other guy official data disk
Jambala, the Seven Gates of (Thalion, DS disk version)
Jupiter Probe (legendary Steve Bak shoot-em-'up with Rob Hubbard Music)
The Killing Game Show (Psygnosis, 2 disks)
+Leatherneck (Microdeal shoot-em-up, really cool, you have to disconnect
printer to
get it to work, does not work on Falcon, alas)
Monster Business (platform game, Eclipse design)
+Obliterator (2 disks, Psygnosis)
+Prehistoric Tale (Thalion game, coded by The Lost Boys, platform thing)
+Return to Genesis (the first true horizontal smooth scrolling shoot-em-up by
Steve Bak, excellent graphics, great game)
+Revenge of the Mutant Camels, registered version for 1 Mb ST
Shaolin, Chambers of (Thalion, Martial arts game, 2 disks)
+International Soccer (Microdeal, I think it's the best soccer game ever on the
ST)
Spaceport (like Fort Apocalypse on the C-64, great concept, dodgily programmed)
ST Karate (great graphics, old karate game by Paradox)
Stone Age (really nice puzzle game by Eclipse, excellent graphics, DOUBLE

FORMAT, WORKS ON ST AS WELL AS AMIGA)
STrikey (Pacman clone by STRIKE-a-LIGHT, ancient)
Teramis, Leavin' (vertical scroller, shooting about spaceship, Thalion game)
Terrorpods (2 disks, graphically impressive, Psygnosis)
Warp (nice Thalion shoot-em-up, graphics by ES of TEX)

COSTS: Remember, no manuals and packaging. All I'll be sending you is the disks. I am selling all this stuff at 2.5 British pounds per disk. Refer to the end of this text for more details. This includes postage and packaging.

SECOND CATEGORY: UTILITIES

These are sold without manuals either, unless specified. All original stuff, no pirate stuff.

1st Word Plus, 3.20 TT (2 disks) *
Crypt It (old Tommy Software encryption thing)
Degas Elite (Batteries Included) *
Ed Hak (editor) *
FastCopy Pro 1.2 * (works on Falcon)
G.I.S.T. the Sound Tool
Desktop Butler James *
Imagecopy 2 * (2 disks)
Imagecopy 3 ** (3 disks)
Mortimer (desk thing by Omikron)
Mortimer Plus * (see above)
Mouse Tricks 2 *
Positive Image ** (2 disks, version 1.0, manual available)
Protext 5 ** (4 disks, and I also have the manual)
Spectrum 512 * (512 colour drawing program, regular ST only)
Turbo ST (screen speeder, ST only)
Universal Item Selector III
View II * (by DMJ software, good stuff)
Warp 9 ** (3 disks, version 3.81, best for ST)
Xboot 3.10 *

COSTS: The regular ones cost 2.5 English pounds per disk. Titles with one * cost 5 English pounds. Titles with two ** cost 10 English pounds extra. If you want the manual sent, that will count as one normal disk (2.5 pounds). The Do note: Protext/Le Redacteur manuals are big whoppers of things, so those will cost 5 pounds extra instead of 2.5.

Examples:

Protext costs (4 disks plus double extra = 4 * 2.5 + 10) 20 English pounds without manual. With manual, it costs 25.

Imagecopy 3 costs (3 normal disks plus double extra = 3 * 2.5 + 10) 17.5 English pounds.

Fastcopy Pro 1.2 costs (1 disk plus extra = 2.5 plus 5) 7.5 pounds.

THIRD CATEGORY: DEMOS.

This is basically a collection of demos that I have. The price varies per demo, and is given for each title. The price specified is in British pounds, so if you want to make another currency of it, check the "additional payment details", below. All demos are ST only!
!! These demos can only be fill-up orders, or orders if you have ordered more than 10 British pounds worth of the first and second category !!

BIG Demo (with handwritten label by ES of TEX, ST only): 2
Amiga Demo (ST only): 1
California Beach Girls (fantastic monochrome slide show of girls by the Denise Team. Classic old demo, requires DS disk drive, monochrome only!): 1
Thalion Sound Demo (a copy-protected rare Thalion sound demo, done in 1988, with Mad Max music. Never officially released. You can't put this in a PD library because it's copy-protected!): 2
FNIL (large DS disk drive demo by TNT crew): 1
TCB New Year's Demo: 1
Union Demo: 1
Cuddly Demos: With hand-written stuff by Nic of TCB: 2
Whattaheck Demo: With hand-written stuff by NIC of TCB: 2
Decade Demo by Inner Circle: With hand-written stuff by Griff of Inner Circle, final version of 12 sep 1990, STE compatible: 2
Syntax Terror Demo (megademo by Delta Force, compiled, made, finished and copies at the ST NEWS International Christmas Coding Convention in 1990, signed by New Mode, Slime and Chaos Inc. of DF!!): 7.5 *****
European Demos: (megademo of Overlanders, 2 disks, also finished and copied at the STNICCC in 1990, signed by all members of Overlanders): 7.5 *****
Dark Side of the Spoon (by ULM, megademo, with custom ULM label): 1
Lightning Demo (by pendragons, with handwritten label by pendragons): 1
Punish Your Machine (two disk demo, excellent, by Delta Force): 4
Ultimate Muzak Demo (by PHF), volumes I through V, five disks, only sold as a set, all with hand-written labels by Grazey of PHF: All five for 6
Ooh Crikey Wot a Scorcher (TLB megademo, excellent, signed by all members of TLB plus other participants such as Oxygene, Tyrem, Fury, Hawkmoon and Tanis of
TCB!): 7.5 *****
Ventura Demo (2 disks, I think it's by ST Connextion, with hand-written labels by them): 3
Reality is a Lie: 1
Black and White: Rare Polish megademo, with hand-written stuff and pix by them on label: 1.
Colorz: By Haemaroids, hand-written label by them: 1.
Froggies over the Fence: Three disk "last of the true megademos", released september 1993, with custom Overlanders "Froggies over the Fence" graphic labels": 8 for all three disks.
Bedlam demo by Chaos: 1
Never + Forever Demo by STEW, GfA Basic megademo: 1
The Beginning of the Ending demo by Flexichron: Handwritten label by Offbase of Flexichron: 1.

The demos with ***** are kindof special to me, and I am not very keen on selling them because they're signed by old friends and all. So the prices are "STARTING BIDS", meaning that you can bid on them. The person who makes the highest offer gets them.

FOURTH CATEGORY: MISCELLANEOUS

ATARI ST CARTRIDGES

And then there's the "Multiface II" and "Ultimate Ripper" cartridges. I also have those. They're ST-only, NO FALCON COMPATIBILITY. I haven't got the manuals anymore either. If you're interested, email me with an offer.

LYNX CARTRIDGES

The following Lynx games are available for 5 British pounds each:

(No manuals and boxes)

Ninja Gaiden
Rampage

I am willing to swap any of those for Battlewheel.

GAMEBOY CARTRIDGES

(No manuals and boxes)

The following Nintendo Gameboy games are available for 5 British pounds each:

Bubble Bobble (difficult to play, a real challenge)
Dragon's Lair (beautiful graphics, difficult to play)
Hyper Lode Runner (the classic game)

I am willing to swap any of these for that old tennis-game that was released for the Gameboy in 1989 or 1990.

BOOKS

Books in German:

Atari ST/STE/TT Profibuch (Sybex) THE programming bible, in mint condition. Asking price 25 Dutch guilders or 25 German marks.

Das Buch Zum Atari Falcon 030 (Data Becker). Asking price 10 Dutch guilders or 10 German marks.

Das Grosse ST Viren Schutzpakket (Data Becker) Originally with disk, but I haven't got that anymore. Asking price 10 Dutch guilders or 10 German marks.

GfA Basic (book by Frank Ostrowski, including disk). 10 Dutch guilders or 10 German marks.

GfA Handbuch TOS & GEM (GfA Systemtechnik). 10 Dutch guilders or 10 German marks.

Atari ST Floppy und Hard disk (excellent book, Data Becker, hardcover). 20 Dutch guilders or 20 German marks.

Das Grosse GfA Basic Buch (Data Becker, hard cover). 15 Dutch guilders or 15 German marks.

Scheibenkleister II (by Claus Brod, THE mass storage media bible, with disk). 20 Dutch guilders or 20 German marks.

Book in Dutch:

Programmeren van Basic naar C (Data Becker). 10 Dutch guilders.

If you're interested, please email me with an offer (please also mention the country where you live, so I can estimate the postage costs). ALL BOOK PRICES MENTIONED HERE ARE WITHOUT POSTAGE!!

- READ THE BITS BELOW!! READ THE BITS BELOW!! ----------

ADDITIONAL PAYMENT DETAILS:

I would like people in Europe to pay in British pounds or German marks (German marks = British pounds multiplied by three). People from the Netherlands can pay in Dutch guilders (British pounds multiplied by three). I have to request people outside Europe have to pay in American dollars (British pounds multiplied by 2). No cheques, just cash or International Money Orders from the post office.
I don't like to receive any coins, so if you order for 7.5 or 12.5 pounds (or whatever other currency) then please pick another title and make sure the total amount is divisible by 5 (INT(x/5)=x/5). If you pay with Dutch guilders or German marks, make sure the amount is divisible by 10. If you pay in dollars, simply round off the amount to the next whole dollar and use US$ 1 bills.

GUARENTEE

I can't give any guarentees. Some of the games are old, and some of them have been sitting in my disk boxes for quite a while. All ST-specific titles have not been played since 1993 or so. I am not out to rip anyone off. I have been doing "ST NEWS" and have been doing (and will be doing) "Ultimate Virus Killer" for quite some time and I hope people know that I can be trusted.

WANT SOME?

Email your order and WAIT FOR CONFIRMATION (DON'T SEND ANY MONEY YET). The quickest mailer gets the first right on a given title. I'll mail back to confirm and then you can send off the dosh. I will despatch the disks by return mail.

1317. Summertime Atari Auction

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: cvendel@aol.com
Message-ID: <19970801053000.BAA13500@ladder01.news.aol.com>
Source record: 118942

Welcome to the Summertime Atari Auction

Rules:

1. Please don't participate if you wont pay for bids you win
2. Winners are responsible for shipping charges
3. Bids will start with minimum amounts and go up in $1.00 increments min.
4. I reserve the right to pull an item at anytime for a buyout or trade
5. Auction goes into Going Once/Twice/Sold on August 15th.
6. Respond with EMAILs only, I will not check the newsgroups for
responses.
7. Winners should send Money Orders or Checks. NO CASH please.
8. Respond to: cvendel@aol.com

Atari 2600 Items:

Atari Dodge' Em SEALED in a rare all WHITE box with black lettering
Minimum Bid: $5.00

3 Atari Walt Disney: The Sorcerers Apprentice Cartridges Only
Excellent condition, Blue/Yellow labels with Full Color Image of Mickey in
Wizards robe.
Minimum Bid each: $5.00

2 Atari Seasame Street Packages:

Cookie Monster Munch SEALED in original box/plastic
Big Birds Egg Catch SEALED in original box/plastic
Atari Kids Controller SEALER in original box

Each package is sold as a set and will not be broken up.

Package #1
Minimum Bid: $20

Package #2
Minimum Bid: $20

!!!!!!!!!!Atari Lab Loaner Cartridges!!!!!!!!!!!!

Yes, these are REAL lab loaners with actual Atari black/white loaner
labels on
them, these are no the fakes or copies you may have seen in the past.

Atari Joust 222
Minimum Bid: $20

Atari Cookie Monster Munch
Minimum Bid: $20

Atari Big Birds Egg Catch
Minimum Bid: $20

Atari Donalds Speed Boat Race
Minimum Bid: $20

Atari Memorabilia:

Millipede Hanging In-Store Mobile advertisement (sealed in original bag)
Minimum Bid: $10

Centipede T-Shirt (large) with Atari Store tag still on it.
Minimum Bid: $10

Atari Prism: This is a TRUE COLLECTORS PIECE
Glass prism with Atari floating in the center with an Atari custom IC chip
also
floating in the center. At the base of the prism looking down from the
top you can read "Atari... We brought the computer age home"
Minimum Bid: $25

Send all email to: cvendel@aol.com

Curt Vendel
Atari Vaporware & Rarities, Androbot TOPO and BOB Robot collector
Email: cvendel@aol.com
Web Site: http://members.aol.com/cvendel/vaporware.html

Sounds a nasty one, Derryck.

I would suspect that the file system has gone wrong at some time or other and that there may be some funny bits set in "file permissions" which are preventing normal file operations. This may explain why SBOOT can't rename the Harlekin file. If the Protext RSC file is corrupt it may also explain (indirectly) why it failed to be replaced when you re-installed bits of Protext.

Have a gander at the file attributes bits esp. the Harlekin file for a start.

1325. MagiC 5.11 questions

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <e05_9708011024@ronly.org>
Source record: 118950

More questions:

o Anyone have any success with AUTOMOUS.PRG (Mouse-Ka-Mania II)?

o Any way to configure WBDAEMON?

o If I create even one long filename, Diamond Edge 2.03 reports a "Corrupted Directory Entry" and shows me a folder that looks like a bunch of garbage. If I tell it to fix the problem, I lose my long filename and am left with the short filename that MagiC created. Is this an incompatibility with Diamond Edge, or is VFAT really corrupting partitions?

* LED v1.51 * For Atari support call The Rebel BBS @ 702/736-2822!

The German version *is* available from ASH. It works fine (see the forthcoming issue of the ATOS magazine if you understand a little German: http://wwwrzstud.rz.uni-karlsruhe.de/~uk48/ATOS/index.html), and it took me less than 10 minutes to configure it for connecting to my provider.

bye, Thomas

>
>Mike

The URL for B&C is: http://www.myatari.com
If you read my original post, you'll see that I am aware of B&C.

However, $50 US comes out pretty expensive by the time currency
exchange and shipping are covered for. Add to this the impossible
task of ordering from outside Canada without a VISA, since COD
cannot be performed accross the border.

Given that I *know* several user groups have copies, I *know*
someone out here in Canada must have them and be willing to
make copies. There several copy centers near colleges that
can batch copy books and turn them back as bound copies.

Given Atari doesn't stock them anymore, these fall under the
grey market practices. Law allows one to obtain service manuals
to perform their own servicing. Only in this case, the company
that made the product is no longer in business. It therefore
becomes the users' responsability to keep the vibe alive.

Hi Mario,

I somehow missed the response to my own reply.
Thanks for helping out! ;-)

About KGMD, if one has about 32 Mb of HD space, then installing
the whole package is a much better and cleaner way of doing it.

However, myself and others, I suspect, only want a quick stable
PPP stack and would rather avoid UNIX (altough UNIX familiarity
is a definite plus these days).

There is PPPkit 1.4 out there, but the documentation is somewhat
sketchy and the files are not always placed where FreeBSD expects
them by default, which sometimes creates conflicts with GEM.

I am presently assembling and documenting a PPPkit 2.0 using the
most up-to-date Mintnet patches, including the recent 115k2 baud
Mint 1.14-3 and PPPD, plus a soon-to-be-upgraded GlueSTiK and an
other version of ConNexion.

Currently, GlueSTiK and ConNexion are undergoing a major facelift
by their authors, so I will wait until those are released.

Please don't start flooding me with mail asking when. Watch this
newsgroup and my homepage's download site regularly for updates.

> but i am quite good with the soldering-iron so please help me get my
> HD (SCSI) connected to my computer. Peter

Well, it's not that simple..

The thing is that the ATARI ACSI connector is not a standard and you
can't find a
SCSI circuit that you can connect to it, you have to do just like ICD
and GE-Soft, design a circuit of your own.. Kind of tricky..

So, in the end it's much cheaper to buy one..

In Sweden, I think you can talk to Mr. Data in Stockholm or Malmoe, or
call Indigo in Denmark.
I think a "The Link" is not more then 700-800 Kr.

/Freddie

All you need is a disk monitor that provides for writing a new boot
sector. DISKUS allows this but it's only available in a German version
so it probably won't help you.
(http://acp5.chemie.uni-kl.de/seimet/diskus_english.html)
SED should also work.

You need to run the CONFIG.PRG which comes in the LED archive to
change the formats to what you want. It doesn't care what is in NVRAM.

The only thing which bugged me about LED was that, on the 12-hour
clock format, it showed midday+ as 00.xx rather than 12.xx.

The difficulty in replacement depends on what kind of hard drive it is.
If it is an external unit attached through a scsi controller, the drive
mechanism could probably be replaced for under $100(US). If it is
internal, it may still have a scsi controller and be easily replaceable.
Your problem will be if it is an MFM or RLL drive, which are not common
now. This would also mean that it does not have a scsi controller. If
you could get the model number off the drive, I could determine what
type of drive it is.

That's exactly what I had to do here, drop down to 57600 and it all
works perfectly.

No worries, glad to assist.

>o Is there any way to autoboot a program in parallel, such as Semper? I know
>about #_AUT, but that's not what I want.

You could always run semper in the c:\auto\apps directory, but this
would necesitate moving the config files. I think under MagXDesk (are
you using this or Thing) you could set up an alias to the \apps folder
butI'm not sure if this woudl work.

>o Is there a function, such as on the Mac, for cleaning up the desktop and
>neatly aligning all the icons?

I use Thing for this.

>o MagiC apparently boots in ST-Med. Is there any way to change that? I don't
>mean the desktop, but for the AUTO folder loading/display.

I use SToop (discontinued boot selector for the Falcon), boot in Mono
and then use MagiC to change to 16 colours.

>o I only have one parition set up so far for long filenames. Sometimes the
>file selector uses short names on that partition and sometimes it uses long
>names on my other partitions. Is this a known bug? Will it go away if I go to
>long filenames on all partitions?

No ideas there are (well with 5.03 at least) problems with the long
file names so I don't use them.

>o Any way to save the sort mode (e.g. Type) in the file selector?

Erm I use Freedom here, and with that you can.

>o Is there a boot manager which directly supports the MAGX.INF file the way
>Stoop supports NEWDESK.INF? That is, change the screen size and colors of a
>single file instead of keeping a separate file for each resolution?

Again I do not have this problem with Thing.

>o Does SAM not work with MagiC or is it just me? I get the startup sound, but
>nothing beyond that.

Same here, but it depends of what AUTO/ACC's you have in, works
great here ifI drop NVDI.

>o And finally, what is <frei> in the application manager and why are all those
>extenders assigned to it? Can I delete, say, the *.CP? extenders and reassign
>them to Cops?

No ideas here, again I use Thing which to me is the perfect desktop
with MagiC.

Hope the above has been of use.

By the way, NT only supports drive letters A thru Z.
It can use the Universal Naming Convention, so you can "add"
26 drives from another networked computer. It doesn't support
more than 26 devices on 1 computer.
Conclusion, in this casr an Atari is still superior to NT.
There is software on the market which enables a pc to go beyond
the drive limit of 26 (drive Z), they create Folders for a drive.
Such software costs you an arm and a leg. Around $4000 or so.
They'll say it is intended for networks and CD towers.
Yeah, but I'm just running a small bbs see...

>
> He's using all drives upto and including Z!

Well, we're running a bbs on our 260ST with 43 CDroms attached to it!
And still a 1 GB hard drive. Drive letters run from A thru Z, and
a thru z, and $, !, @ and other strange drive letters.
We use a special driver to accomplish this.
The CD towers are Pioneer DRM-604x's and 1 DRM-1804X.

Pretty cool, eh?

Bo.

POPwatch version 2.12 is now available from my web site (see .sig).

This version has a few small bug fixes, the biggest of which should
prevent large emails (over 32k) from sometimes being corrupted when
downloading them. ie. corrupt UUEs.

Regards, Gary

Ss> Does MetaDOS also behave this way, or would it solve Pauls problem. I
Ss> wonder if the fabled Magcic XFS would help him.

The driver we use is MetaDOS (to access more than 43 devices).
My brother had to patch MetaDOS a bit, to make it work in
conjunction with the Pioneer DRM-1804X.

What I don't like about it, is that booting the ST (and MetaDOS)
takes a while. It "scans" all available devices to "see" if there
is a media present (CD). So it changes and changes and changes,
until all 43 CDrom drives were checked.
Geez.

=====> SOFTWARE
- All titles include box and manuals unless otherwised specified

OSS Personal Pascal.............$ 21.00 (full manual included but no box)
Dr.T's Roland D-50 Editor/Libr..$ 35.00 (no box - it never had one)

Leisure Suit Larry 2............$ 16.00 (classic sleazy fun w/pixelated nudity)
Leisure Suit Larry 3............$ 15.00 (more sleazy fun w/pixelated nudity)
Universal Military Sim (UMS)....$ 11.00 (excellent war strategy game looks
best in mono/med resolution)

Other software available, email if interested:
DC Shower, MultiDesk Deluxe, Neodesk4, Lookit/Popit, X-Boot, Warp9, Datadiet2,
Dr.T's KCS L2, Datamanager, STalker 3, STeno, HighSpeed Pascal

=====> BOOKS
Intermediate and Advanced Atari ST Subjects by Ralph C. Turner......$9
"a book written in plain English that explains many of the difficult
procedures and concepts challenging the serious ST user"

Wired Magazines - spc ed + Oct95 (Jacques Villeneuve interview)...$1 for both

=====> HARDWARE
Epyx 500XJ joystick - minorly broken, probably fixable or usable for parts $2

CaTTamaran - accelerator for TT's makes them 48Mhz instead of 32Mhz, easy to
install in any newer revision TT (motherboard B and up; 80% of TT's
in existence). Previously installed in a pre-A revision TT, which
turns out doesn't work with the CaTTamaran. Comes with original
disks, manuals and extra documentation from Cybercube. Sold as is,
with no guarentee because I can't test it on my system first.......$50

Atari TT030 computer - Faster than a Falcon, perfect condition!
4MB ST RAM + 4MB TT RAM - for greatest flexibility and compatibility
135MB internal HD - excellent condition and just the right size
Atari TT VGA monitor - 14" color screen allows 256 colors (* see below)
Atari mouse
Includes all original manuals, software, disks, boxes(!)
Includes unlimited tech support via email from me, a 10 yrs experience ST user.
Includes any software listed above at only 1/4 the price listed.
All in excellent condition and guarenteed to work for 14 days.......$700
* The monitor has recently manifested a wobbly picture after hours of use,
a good tap on the side temporarily fixes the problem. My dealer says it
probably is a cold solder joint that needs to be tracked down. Otherwise
in perfect condition and perfectly serviceable. The package without the
monitor is $670.

All prices are suggested, feel free to make an offer, though I will give first priority to those offering my asking prices. If you are interested in any of the items, please reply to trevor@cyberspc.mb.ca. Questions are welcome. All prices are in US dollars. Buyer pays shipping. Shipping costs are non-negotiable. Volume discounts available. Also 4sale: CDs, comics, textbooks, PC sw, Atari hw/sw, drum kit, 92+ Honda factory CD player, golf self-improvement VHS video - email for info.

Hello again Don!,

Any old terminal emulator should be able to do this - you don't even
need fancy transfer protocols.

Why not have a look at DESKTERM and VANTERM. They are both bigger than
you need, really, but will take a file transfer job at 19k2 in their
stride.

Message-ID: <33E2B2F2.2D6C@worldnet.att.net>
Source record: 118977

Ok, folks, I have a rather ambitious project I'd like your help in completing. I have a MIDI lab that uses 6 PCs and 4 ataris. Four of the PCs run win95 and the other two uses windows for workgroups. All of the pcs are tied in to a local peer to peer net. I
would lke to tie the ataris into the net for the purpose of sharing standard midi files.

I have seen software on the net that will slave an atari to a pc (or vice versa), but
I am more interested in connecting all of the machines with net cards and ethernet, if
possible. Three of the ataris are STE's with 4 megs of ram, and the remaining machine is an STF with 2 megs.

So, where do I begin? Can I get net cards for the ST's. I think I have seen some kind of connection made via the midi ports, but that would tie up that port.

Help!
Thanks in advance

1354. Atari ST & 8 bit for sale

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: Scott Boesken <scottboesken@harborcom.net>
Message-ID: <33E26747.3568@harborcom.net>
Source record: 118979

Atari items for sale: For the ST family. 8 bit stuff at bottom of
list.

1. Actual Atari mouse with Atari logo on it.Two buttons and a DB9
connector Used.

2. Stereo Master for the ST & STE. by Microdeal. Has a cartridge port
input box,software and cable. Comes in like new condition in the box
with
all paper work and user manual copyright 1991. Real time digital sound
effects
and will interface with a external MIDI keyboard. Plays frequencies
from
3.0 to 28 Khz in ST mode and 6,12 and 25 Khz in STE mode.Pretty cool.
Like new.

3. PageStream V1.8 This a earlier version of PageStream. Comes
complete
with 2 floppy disks, a three ringed binder manual and a printed box to
hold
everything. This is one heck of a desktop pudlisher program. Good
condition.

4. Golden Image Deluxe Paint with animation. Comes with 3 disks and
manual.
The program does graphics, fonts, animation, printing and the whole
shabang.
Serious graphics program. Like new and alot of fun.

5. Zany Golf. 2 disk program. It's miniature golf on the Atari. What
a
hoot this game is. Very realistic action. Mouse driven with very good
graphics.
This program made me late for a wedding once.No,not my own, That is
another story.

6. A three volume set of Atari ST and megaST books by Ralph C.Turner
The books cover the basics to advanced levels of knowledge and use.
Very good books in very good condition.

8 bit stuff:
1. Atari 800 computer with BASIC XL catridge. It has 3- 16 meg
modules
and 1- 10 meg memory module. What do you need that much memory for?
2 cartridge slots, and my favorite, 4 (joystick) DB-9 ports. The Basic
XL

cartridge comes with manual. Computer comes with transfomer and printed computer cover. Ready to go, very good condition. Just add a television
and floppy drive. Which reminds me.

2. Atari 8-bit 1050 floppy drive. This 5.25 external (get it?) floppy drive
comes in the original box (which is rough) and ready to go. Very low hours
on the drive which is in excellent condition. My friends brought me up to
16- bit ST very quickly, hence the low hours on this drive.

Submit your offer, as sig members requested, to me e-mail only. I need to
get these items out of here and I would like them to be put to good use!
I am in Ohio U.S.A. for shipping concerns. My e-mail address again is
scottboesken@harborcom.net

Date: 1997-08-01 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <33b_9707311920@ronly.org>
Source record: 119028

Someone said they heard Kobold was up to v4.0. Anyone know if this is true,
and if that's an English version?

* LED v1.51 * For a good time call 702/736-2282!

B&C Computers carries complete schematics for the TT (as well as other models).
They have a web page now, but I lost the addres. The "Field Service Manuals"
cost $50.00 and are worth their weight in chips.

B&C is located in California, near the Bay area.

Mike

1362. MagiC 5.11

Newsgroup: comp.sys.atari.st
Date: 1997-08-01 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <5bf_9707312154@ronly.org>
Source record: 119030

Just received and installed MagiC 5.11 on my Falcon. Installation was remarkably smooth and without problem. I simply ran the install program, rebooted and was up and running, all within about 10 minutes. I've been slowly adding programs to my setup, and so far, just about everything is working. And even stuff that's not exactly working is not causing a crash. In fact, I've yet to see a crash, after about 8 hours of messing around <knock on wood>.

The speed, as advertised, is fantastic. When I first installed it, I ran it on a clean system, and even without NVDI, I was amazed at the speed. With NVDI, it simply flies! And it's not just the screen draws, but everything just _feels_ faster and smoother.

And this preemptive multitasking is fantastic. I'm typing this message in LED while receiving a 1 meg bundle at 31.2k via Semper, and the typing doesn't feel sluggish whatsover (unlike cooperative multitasking). But I am getting some CRC errors in Semper, so I may have to reduce my DTE rate from 115200 to 57600 and/or change my background priority rate. (Any suggestions?)

I have several questions, but will address those in the next message.

1363. HELP! How to install 2nd SCSI HD?

Newsgroup: comp.sys.atari.st
Date: 1997-08-02 00:00:00 UTC
From: sergej@midijam.kiev.ua
Message-ID: <H.ekBL.LcDDT_YNO9_@midijam.kiev.ua>
Source record: 118887

Does anybody know how to install 2nd SCSI HD on my ATARI Mega4 STe:

4Mb RAM/TOS 2.05/48Mb int. HD Seagate 1557N/30Mb ext. HD VORTEX with
Kyocera KC-30B (both formatted and used as ACSI-devices now).

I have yet unused new SCSI 540 Mb Seagate 5660N and I guess why does
not to install 2nd HD into place beyond VME-slot?
AFAIK, Mega's HD controller hardware support SCSI- devices as well
ACSI-?

I'll be very greatful for any information, advices or commentaries
about this problem.

1364. Auction: GOING PHASE: Ultima/Origin/Infocom games

Newsgroup: comp.sys.atari.st
Date: 1997-08-02 00:00:00 UTC
From: bilstein@mail.utexas.edu
Message-ID: <5ruai0$hs0$2@geraldo.cc.utexas.edu>
Source record: 118888
Cross-posted to: comp.sys.ibm.pc.games.marketplace,rec.games.computer.ultima-dragons,comp.sys.apple2.marketplace,comp.sys.atari.st,comp.sys.atari.8bit,comp.sys.cbm

The auction is now in the once-twice-sold phase!

Welcome to my Ultima/Origin/Infocom auction. I'm getting rid of the last of my classic computer software to make some money for Atari 2600 games and items. If you have any decent Atari 2600 stuff for trade, let me know about it!

Posting to non-marketplace groups will be infrequent, so please e-mail me to get on the update list.

Please read the rules at the bottom. You are accepting the rules by placing a bid.

==========
THE GAMES:
==========

Autoduel (Apple II) w/box, 5.25" disk, ref. card, map <sirthomas> $25
ONCE!

HitchHikers Guide to the Galaxy (Atari ST) w/box, button, <kwekasc1> $20
fluff, brochure, destruct orders, sunglasses, NO DISKS ONCE!

Leather Goddesses of Phobos (IBM PC) Complete <cylar> $20
ONCE!

Moebius (Apple II) w/box, two 5.25" disks, poster, ref card, <xyzzy> $10
Book of Lore ONCE!

Plundered Hearts (IBM PC) Complete <raistw> $24
ONCE!

Ultima IV (Apple II) w/box, two 5.25" disks, reference card, <deth> $17
Book of Mystic Wisdom, History of Britannia ONCE!

Ultima IV (Atari 400/800) w/box, two 5.25" disks, cloth map, <tommage> $21
The Way of the Avatar, Book of Mystic Wisdom, History of ONCE!
Britannia, Reference card.

Ultima IV (Apple II??) one 5.25" disk only, sides C & D <xyzzy> $3
ONCE!

Ultima V (Apple II) w/box, four 5.25" disks, 2 ref cards, <deth> $19
Book of Lore, Voyage Diary, catalog ONCE!

Ultima V (C64) w/box, four 5.25" disks, cloth map, Voyage <sessesses> $26
Diary, Book of Lore, player reference card, quick reference ONCE!
card, catalog

Ultima: Savage Empire (IBM PC) Complete <karl> $50
ONCE!

Wishbringer (Apple II) (shrinkwrapped - thin style gold box) <sreed2> $20
ONCE!

Wishbringer (C64) Complete <andrewv> $16
ONCE!

Zork II (Atari ST) Complete <zzyzx97> $16
ONCE!

RULEZ**********

1. Auction will last until July 31st, 10:00pm Central time. It will
then proceed to a once-twice-sold format, with the status changing
every 24 hours when no new bid is received.
2. Minimum bid raise is $1.
3. Conditional bids are accepted.
4. I will e-mail updates daily, as well as updating Newsgroups (some
more often than others).
5. International orders must pay with Money Order in US funds.
6. Payment must be in US funds, check or Money Order. I may hold a
check up to 10 days, a Money Order will get it shipped in 1-2 days
of receipt of payment.
7. If you would like to get on the update list without yet bidding,
just ask.
8. If you would like to be removed from the update list at any time,
just ask.
9. Buyer pays all shipping, to be determined at the end of the auction.
It will probably be $3 for the first two items, plus .75 per additional
item.
10. References provided on request.
11. If you would like to use an alias, please let me know.
12. I am not an expert on these items, so please ask if something is not clear.
No items are implied, if it isn't listed, it isn't there.
13. In the case of tie bids, the first bid received is accepted.

1366. Re: MagiC 5.11 questions

Newsgroup: comp.sys.atari.st
Date: 1997-08-02 00:00:00 UTC
From: leslieh@valis.worldgate.com
Message-ID: <5rul7l$3tr$1@scanner.worldgate.com>
Source record: 118890

Terry May <Terry.May@rebel.ronly.org> wrote:
: I have some questions about MagiC 5.11. Any input will be appreciated.

: o What happened to the v5 manual? It came with a v4 manual and no update docs
: (except for a short readme, talking about VFAT). Not very professional.

No clue, I'm still waiting for my upgrade from 5.03. :)

: o Is there any way to autoboot a program in parallel, such as Semper? I know
: about #_AUT, but that's not what I want.

I'm unsure, then, as to what you want.

: o Is there a function, such as on the Mac, for cleaning up the desktop and
: neatly aligning all the icons?

Not on my version (unless you're talking about screen garbage, in which
case, simply click on the menu bar away from any text, and select 'tidy up')

: o MagiC apparently boots in ST-Med. Is there any way to change that? I don't
: mean the desktop, but for the AUTO folder loading/display.

I don't think so. What computer are you using? This makes a difference.

: o I only have one parition set up so far for long filenames. Sometimes the
: file selector uses short names on that partition and sometimes it uses long
: names on my other partitions. Is this a known bug? Will it go away if I go to
: long filenames on all partitions?

I've never had that problem.

: o Any way to save the sort mode (e.g. Type) in the file selector?

No.

: o Is there a freeware/shareware solution for adding/changing icons? I know
: about Interface and it's a great program, but I can't afford it right now.

Simply place the icon file into the folder C:\GEMSYS\GEMDESK\RSC - then,
a) run APPLICAT.APP or b) select the icon you wish to change, and select
Assign Icon from the menu bar under Options.

: o Is there a boot manager which directly supports the MAGX.INF file the way
: Stoop supports NEWDESK.INF? That is, change the screen size and colors of a
: single file instead of keeping a separate file for each resolution?

XBoot allows you to set three file names, then select various files to
rename as those three file names.

: o Does SAM not work with MagiC or is it just me? I get the startup sound, but
: nothing beyond that.

Works for me.

: o And finally, what is <frei> in the application manager and why are all those
: extenders assigned to it? Can I delete, say, the *.CP? extenders and reassign
: them to Cops?

<frei> merely provides a place for the free (not assigned) icons. Feel
free to reassign the *.CP? extender to COPS.

Leslie

Terry May <Terry.May@rebel.ronly.org> wrote:
: More questions:

: o Anyone have any success with AUTOMOUS.PRG (Mouse-Ka-Mania II)?

Don't use it.

: o Any way to configure WBDAEMON?

Place it in your C:\GEMSYS\MAGIC\START folder. That's the only way to
configure it. (I don't recommend it though.)

: o If I create even one long filename, Diamond Edge 2.03 reports a "Corrupted
: Directory Entry" and shows me a folder that looks like a bunch of garbage. If
: I tell it to fix the problem, I lose my long filename and am left with the
: short filename that MagiC created. Is this an incompatibility with Diamond
: Edge, or is VFAT really corrupting partitions?

Incompatibility.

It is good to know that people are having success with CAB and the new OVL.

I've never had any success, either with CAB 1.5 or the demo of 2.), and with OVL 1.25 or the new 1.26. I can get a page or two (notably, my connection is to college, and I can get my own department's web page) but most other links or direct opening of a URL just bomb me back to the desktop. Does anyone have *any* idea of what might cause this? There could be an accessory or auto conflict, but apart from Teradesk, I don't think I've got anything unusual.

My usenet supplier seems to miss out quite a few messages, so please answr by e-mail to me as well as to the newsgroup.

Recently I have gotten a TT with a Nova card and it
is very impressive. A few problems, though.
First, Imagecopy does not seem to work with the Nova
card and it messes up the screen display so that
rebooting is necessary. I have tried changing
screen settings to no avail. Any suggestions?
Also, I have been searching for an imaghe processing
application. The best I have used so far is
Photoline. Does anyone know why Positive Image
is so sluggish on my machine? It draws out pictures
one box at a time. I do have six megs.
I would like something along the lines of Photodeluxe
on the Mac. DAS Picture seems okay but are there
filters outside there for it? Are there demos of
either True Image or Photo Studio? I would
like to give those a try. Thanks for any help.

Hi People :o)

I'm after some advice, please.

I'm seriously thinking about getting a scanner. It'd be mainly used for sticking piccies up on my Web site, so I'm not gonna be needing Hi-Res Truecolour, or anything :o)

Then, of course, there's also the matter of what software I'd need to use it on my (standard) Falcon.

Anyone got any suggestions about what type of scanner to get and how much I can expect to pay, please ?

Thanks,

See ya,

Paz.

>until all 43 CDrom drives were checked.
>Geez.
>
>Bo.

I think they all do that. My 2 Pioneer DRM-602X 6-packs do the same thing
with ExtenDos Pro... I've found that popping the cartridges out before
booting makes the process go much faster. It doesn't read each CD then.

If I leave them in, it takes awhile for 12 CDs-I can't imagine 43!!! :)

Here is the reason as to why the Everest Homepage and
several other pages will not show properly, as explained
by CAB's author:

--------Alexander Clauss wrote--------
Date: Sam, 2 Aug 97 15:45:29 +0200
From: aclauss <aclauss@rbg.informatik.th-darmstadt.de>

>http://haensel.math.uni-kiel.de/oschmidt/everest.html
>
>A friend who has both Netscape and Explorer assures me
>it can be viewed without any problem.
>
>Notice that Netscape's Mozzilla was used to generate this
>page. Could this be the cause of the problem?

The problem was a illegal character (ASCII 0) in the file.
CAB (the last beta) now scans the file for such characters
and replaces them with the space character before parsing
the file.

--
Alex
--------End of Quote---------

NOTE: this last beta Alex refers to was just sent to CAB
beta-testers and works as reported. Should be fixed
in the next CAB 2.5 commercial release as well.

Still, doesn't it cautions one about using those
commercial HTMLizers to create homepages? ;-)

The Mega has only an ACSI port, there is no direct SCSI support.

I guess your external HD is connected to ACSI using a host adapter of
some sort? You should be able to extend the SCSI bus which comes out
of this to connect up to 7 SCSI devices (of different IDs)

Do I understand your problem, Serge?

I have two Lantech LT101 networking cartridges that I would like to sell to the highest reasonable offer. I have tested these in a network between my Falcon and Mega and they worked fine. They claim to have a speed of 10 Mbit but they don't feel that fast. I will include the thin net cable needed, just tell me the length you need.

I have two very hard to find 8 bit items I would like to sell. The first item is an Atari 1400XL computer. This was going to be the upgrade/ replacement for the 800XL before Mr. T and family took over Atari. It has both built-in modem and voice. The case is the same as the 1200XL.

The second item I have is an 815 disk drive. This was to be the big brother floppy drive to the 810. It is a double drive, double density unit. Atari really hurt themselves by allowing their dealers to take deposits on this drive and then not being able to produce it. Very few of these made it out of the lab.

I will accept the highest reasonable offer for these items.

What you're seeing are not actual timeouts, but a display of the
timeout coountdown timer. It starts at either 120 or 60 seconds then
starts counting down and only reports an error if the timer gets all the
way down to zero. Personally, I'd rather it didn't display this unless
there were an actual error, but I can live with it. CAB.OVL 1.2618 seems
to be a nice improvement over previous versions!

Hi,

: o If I create even one long filename, Diamond Edge 2.03 reports a "Corrupted
: Directory Entry" and shows me a folder that looks like a bunch of garbage. If
: I tell it to fix the problem, I lose my long filename and am left with the
: short filename that MagiC created. Is this an incompatibility with Diamond
: Edge, or is VFAT really corrupting partitions?

Diamond Edge is not able to handle long filenames (VFAT).

All the best,
Daniel

I didn't have any better luck than you. If I remember right it cannot be used in a multitasking system. Anyway I thought I seen that in the docs. I can't use it on the Afterburner as it must load old GEM, and the A/B already does that.

Not inside :). The internal SCSI controller only handles one HD. The external connection requires the use of a ASCI to SCSI convertor. Check with ICD (makers of the Link). There is also a company in Europe that is making a similar unit, but I cannot remember their name.

This allows you to use COPS in singleTOS. It may have other functions, but
that is the one I know about. It gives you extended window functions that
aren't normally available.

I just did (again) and see nothing in there to change the format of the date or time. It's either on or off, nothing else.

RC> It doesn't care what is in NVRAM.

Well, all I know is it follows my NVRAM settings in singleTOS, but does it European style in MagiC, without changing a thing with the CONFIG program.

RC> The only thing which bugged me about LED was that, on the 12-hour

DB> That's exactly what I had to do here, drop down to 57600 and it all
DB> works perfectly.

Yeah, right after I left that message, I dropped down to 57600 and slightly increased my background priority, and all is fine now. I can do all kinds of stuff while Semper is downloading, even completely blocking Semper for several seconds, and no CRC errors. That's neat! :^)

I am, however, having another problem with Semper. If I have outbound mail, the first time it dials after a reboot, all is fine. However, after that, it doesn't even take the phone off hook, let alone dial. But, if I run something, so that Semper goes to the background, it then dials fine while in the backgroun. Weird. My Timeslice CPX is set at 5/1:20.

because THING doesn't find it's inf file. you have to specify in your
mint.cnf what desktop /shell you are using..

>
>Then I tried to exit "Thing" to get into the usual TOS 2.06 desktop, but
>that resulted in all filenames being shown in lower case and I couldn't run

of course, you need to have a minimum setup, just few lines (2 or 3 in
your mint.cnf and that's it, to make it realize what kind of files are
actually executable.

>Argh!!!! If this is what MiNT does to your system I'd rather wait for

There are 10 additional drive letters (at least under MetaDOS and SPIN!).
As the number of LUNs is limited to 8, there shouldn't be a problem.

>if the fabled Magcic XFS would help him.

Wrong question. It's not MetaDOS itself which controls this, it's the DOS driver. Technically the DOS driver could mount all LUNs as separate folders under one drive letter.

The two XFSs for MagiC work the same way - one device, one drive letter. What I could do with SPIN! is to allow to mount a file system on a folder in U:\ instead of a GEMDOS drive letter. But this might result in a big amount of changes, and none of the people who sent money to me mentioned that they have a CD juke box.

Is it possible that the archive was damaged when you downloaded it? I had
a problem with archives that decompressed normally but the data was
damaged. It was a problem with the .mime.types file on my server.

> Anyone had any luck running the 3.6 version? Does the German version work?

Works fine here.

1406. VGA and/or RGB Monitors with a 520 ST?

Newsgroup: comp.sys.atari.st
Date: 1997-08-03 00:00:00 UTC
From: "Douglas \"Lonely Planet Boy\" Shawhan" <lysdexia@evansville.NOSPAM.net>
Message-ID: <Pine.SOL.3.91.970803030416.6839B-100000@world.evansville.net>
Source record: 118784
Cross-posted to: comp.sys.atari.st.tech,comp.sys.atari.st

Hey all,

I was just given a 520ST and a 130XE. I was intending to run linux on the 520- until I read the FAQ.. Dang! No FPU.

As you can probably tell I am entirely new to the Atari. I have no monitor for either, but I do have a pc VGA (grayscale- capable of 720x500 under X on my linux box) and a really neat old Commodore 1084 video monitor. Can either one of these be used with my ST? I do not fear the soldering iron and feel like I could cobble up a cord if only I had the pinouts- Unless there is a more sinister contraindication?

Is there a FAQ for the ST series? I would like to give the old fellow some more ram, but I haven't looked inside to see if it will take a simm yet.

Just fiddling with it hooked up to a TV, I was impressed with the graphics- really surprising! The built-in midi is neat too.

If anyone would like my 130 they can have it for shipping. It appears to work great and has a printer and all attendant cables and power supplies, but no disk drive.

I too have formatted a few of the IDE drives I use. The subject began with an included warinig by Uwe specifically not to format an IDE drive, and went on to make the statement that, "this is the reason the option is not available wiht HD Driver". There is data that will be removed from some IDE drives if they are formatted. This data cannot be reinstalled with any existing Atari drivers. Weather the data is important under TOS is another matter. Anyway, I think that was the point they were trying to make. There have been rumors of IDE going bad after a format under TOS. I have never experienced this.

While I have never had problems using ICD Pro to format an IDE drive, HD Driver V6.0 finds it impossible to partition my large IDE drives, and for some reason will only read three of the four partitions I have made with SCSI Tool. Both of the drives in question were impossible to format or partition with HDX 504.
I have used HDX with several drives under 1gig without problem. So it is not to say it dosen't work, just not 100% of the time.
The first was a Maxtor 2gig and the second a Fujitsu 2.5gig.
So, my rule of thumb is, I always set up a drive with ICD Pro if is a large IDE drive. I keep the partitions just under 500 megs. After that, HD Driver V6.0 or HUSHI work fine as disk drivers.
ICD has released V 7.0 of ICD SCSI Pro. I am looking foward to this. I always enjoyed ICD Drivers, but when compatibility became an issue, I had to move on. No it looks like Jack is back:).

I am sure that some of this is contrae to expert opinion, but it sure works well for me. It's my machine and my data, and I will do with it as I please:).

Now if were talking SCSI, HD Driver is the way to go:).

Yes, figured it out, thanks. And I agree with you as well. This feature
is slightly useful as an indication of network traffic, but that can be
easily sensed and seen with the older messages as well, and all the
numbers are a bit distracting visually. But I'm so happy with the OVL's
other features that I'm happy Dan Akerman released this version of the OVL
early.

Does anyone else have this problem:

I run aftp13b.prg & stik 1.12 and it all seems fine. But when aftp13b
connects to the server it displays a blank FTP window. In other words you
can see the desktop instead of the filelist in the GEM FTP window.
Other than that little glitch, the atack crew should be commended for
their efforts.

Source record: 118797

Hi everyone,

The deadline for Atari Times 11 is 23rd August.

If you would like to write something for this or a future issue then please get in touch with me.

I'm in particular need of reviews and previews so if you're able to do some then please mail me at polonowski@zetnet.co.uk

In the meantime, why not visit the Atari Times web page at http://www.users.zetnet.co.uk/polonowski/atimes/ and take a look at what's on offer!

ATB,

Colin Polonowski, Croft Soft Software

Press release 3 August 1997
==========

ATARI COMPUTING MAGAZINE
==========
A 60 page printed magazine published, written and distributed

"By Enthusiasts for Enthusiasts"

Atari Computing will be a year old in September and with issue due to hit doormats around late August we look set to fulfill our aim to deliver six printed issues each year. Atari Computing magazine was launched during September 1996 at the Goodmans Atari shows in London and Birmingham and completely sold out on both days! Delighted by the response we reprinted Issue 1, and increased the print run for all subsequent issues. Issues 2 and 3 have also subsequently sold out.

Atari Computing is published by the Atari Computing Group (A|C|G).

Publisher: Mike Kerslake
Editor : Joe Connor
Art Editor : Darryl Godsmark
Advertising Sales : Mike Kerslake
Online Editor : Bob Paton

A|C|G Team : Mike Kerslake, Joe Connor, Brian Stanton, Al Goold, Andy Wilson, Sandy Thomson, Neil Martin, Denesh Bhabuta, Chris Good, Ian Braby, Martin Milner, Norman Bland.

THE HISTORY OF ATARI COMPUTING
==========
In 1996 Mike Kerslake, the publisher, with over fifteen years experience in the industry teamed up with Joe Connor, ex Reader Disk and PD/Shareware editor for Atari World, and a group of on line Atari enthusiasts to create this new printed bi-monthly Atari magazine. The aim from day one was to create a professional quality magazine "by enthusiasts for enthusiasts". Issue 5 was published in June, and currently back issues of numbers 4 and 5 are available. Issue 6 will be available from around the end of August.

So far Atari Computing has featured contributions from respected and well connected Atarians including: Frank Charlton (STF features editor), Graeme Rutt, Jon Ellis, Nial Grimes, Mark S Baines, Denesh Bhabuta, Carl L fgren, Harry Sideras and Kev Beardsworth (Atari World regulars), Colin Fisher-McAllum (42BBS/AtariPhile/FFF), Howard Carson

(Current Notes), Xav, Thomas Binder (ST Computer), Al Goold and Ed McGlone (STAG), Roy Goring and Chris Good (WAG), Richard Spowart and Chris Holland (Maggie), Steve Llewellyn (Calamus User), Jim Hornby (Wrinklies), Martin Milner (999 software), Colin Polonowski (Atari Times), Neil Martin, Mark Wherry, Andrew Harvey, David Stevenson, Bob Paton, Thomas Mains, Colin Munro, Doug Little (Black Scorpion Software)...
(Apologies to those we have missed out)

We've also signed deals with two of the leading disk based magazines, AtariPhile and Maggie, to publish regular sections within the magazine. If you've never seen a disk magazine before we think you'll be amazed to find out how much you've been missing!

BACKGROUND TO THE LAUNCH OF ATARI COMPUTING
==========
The closure of Atari World and ST Format during 1996 left the UK without an Atari specific newstand Atari magazine for the first time since 1987.

The men in grey suits expected us to move onto other platforms but hang on a minute, let's take stock of the situation...
- Atari machines can be purchased and repaired on a shoestring
- Atari machines can produce superb printed output
- Atari machines can surf the Internet and run BBSs
- Atari machines can form the nucleus of a digital music studio

New software of better quality than ever before is still being released! That doesn't sound like a dead platform! The Atari platform has been emulated by just about every other platform, we're owners of cult machines! Have you ever noticed ex-Atarians animatedly talking about the 'Good old days' it's a feel good factor missing from all the current machines.

We don't need a new platform but we do need information and a printed magazine is undoubtedly the best way to ensure we see in the millenium!

Apart from a darn good read the other thing most of us like is some new software to play with. The Reader Disk concept offers all readers the chance to get their hands on the hottest new software around along with exclusive versions not available anywhere else. We offer a Reader Disk to accompany each issue, buy it or not, the choice is yours! What we need is your support, it's going to be tough to keep going and it really up to *you*! Instead of wishing us luck, post us a cheque to order your copy today!

WHO ARE THE ATARI COMPUTING GROUP [A|C|G] ?
==========
The launch of Atari Computing was financed by the Atari Computing Group [A|C|G], based on CiX, and dedicated to supporting the Atari platform - We're delighted with the response from our readers and are

working hard to ensure future issues maintain and improve the same high standard!

Atari Computing is an enthusiasts' magazine compiled and distributed by Atari enthusiasts. We're not a publishing company so our efforts have to be directed towards getting the magazine out on time - we do not operate an Atari 'helpline' but are pleased to help wherever possible via the Q&A pages in the magazine.

ATARI COMPUTING ON THE WORLD WIDE WEB
====================================
Unfortunately our original online editor, Frank Charlton, has not been able to update our original web pages so we've put a new set of pages up on Zetnet due entirely to the hard work put in by Bob Paton. We're naturally delighted to have online presence again and hope you find these pages worth revisiting regularly. We're keen to know whether you find these pages useful and what you'd like to see online so please do take the time to send us some feedback...

You'll find the new pages on

http://www.users.zetnet.co.uk/ataricomputing/

ORDERING
========
As we're sure you'll appreciate publishing a magazine in a declining market was a very risky venture and our print run has had to remain conservative - we can't afford to maintain a stock of back issues for long, so we only print what we need.

We're not a newstand publication so don't bother looking in the shops. The Atari platform needs this magazine and we need your subscription so do yourself and us a favour, take out a subscription or order an evaluation copy today! If you decide to subscribe you will receive the first available issue, if we've sold out of an issue your subscription will start with the following issue.

SUBSCRIPTIONS
=============
Money back Guarantee!!!

Many of you (and most of us) lost money following the Atari World debacle, and we're determined not to make the same mistake. Atari Computing subscriptions are refundable at any time. Cancel your subscription in writing and we'll return any outstanding credit to you, minus a deduction to cover our costs.

We are continually receiving new subscriptions. As we only print "what we need" of each issue, this means that if we have run out of a particular issue, your subscription will start from the following issue. Remember Issues 1, 2 and 3 are now SOLD OUT. (all reader disks are still available though)

If you're outside the UK

- Make certain your payment is *in Sterling* drawn on a *UK* bank address
The following methods work:
+ International Bank draft/cheque in Sterling
+ Eurocheque made out in Sterling
+ International Post Office cheque payable in Sterling
+ Cash, Sterling, in a registered letter!

Submissions:

We're always on the lookout for talented new contributors so if you've
got an idea for an article please do get in touch.

Enquiries:

All enquiries about any matter concerning Atari Computing MUST be made in writing either via email or by snail mail, and sent to the following addresses. It would also be helpful if letters, subscription enquiries and editorial material were on seperate sheets within the same envelope. Ideally letters and and editorial should be on disk in ASCII format, or via e-mail or netmail if you have that facility. Unfortunately we cannot enter into personal correspondence on general Atari matters, or guarantee that your question or letter will be published due to the volume of mail we receive.

General enquiries should be sent to:

Atari Computing
"Rois Bheinn",
Overton Crescent,
Johnstone,
PA5 8JB
Scotland

Please enclose an SAE for reply. (IRC if enquiring from outside UK)
E-Mail:ataricomputing@cix.co.uk
Netmail: 90:100/315.0@nest.ftn

Subscription enquiries

Atari Computing Subscriptions
73 Bentinck Drive
TROON

E-Mail:ataricomputing@cix.co.uk
Netmail: 90:100/315.0@nest.ftn

Editorial only
(Review material and letters for inclusion in the magazine)

Atari Computing
Joe Connor
65 Mill Road
Colchester
CO4 5LJ
England

E-Mail:ataricomputing@cix.co.uk
Netmail: 90:100/315.0@nest.ftn
REMEMBER: It has more chance of being printed if it is received as either e-mail or on a disk!!

Subscription Payments:

These payments should still be made to the address published on

subscription forms, which are available via email or snailmail.

Receipting subscriptions:

Just like every other magazine, your payment being cashed is your receipt. We cannnot issue receipts by e-mail, SAE, postcard etc. because of the additional work this would place on the volunteer staff.

Issue gone missing? Faulty reader disk?

Write/email the office or leave a brief message on the answerphone on 01206 852602 and we'll sort out the problem as soon as possible. Please don't use this number for any other reason - we won't respond anyway so save your money and our time!

Advertisors:

Atari Computing carries adverts on behalf of the major Atari outlets. Please support them, and mention that you read their advert in Atari Computing. It helps them, it helps us, and it helps you.

yes, it's out there and real - just not in English yet :). There's
been a German user on FIDOnet's Atari conference who's been posting the
results of his playing with the CAB 2.5/PPP connection combo and he
says it works quite well! He also says that a number of German users on
Mausnet have been equally pleased with the new version.

You might want to check out Mille Babic's page and check out his
description of the new CAB 2.5 - he even describes the new modules that
go with it.

The word is that we may see an English version out in a month or
so, judging from what I've heard - and that probably isn't too far off,
seeing that the original CAB2 took a month from the original release in
Hanover in March to System Solutions' releasing the English version at
the UK Atari shows in April. Now that we've got at least one official
NA dealer for CAB 2 in Systems For Tomorrow (I think Computer Direct in
Canada also has it), I can't wait for the upgrade!

: On my falcon the only combination that works is with CAB.OVL 1.20
: Using another OVL I always get these runtime error 163

Do you use HSMODEM?
Might need to tweak it a little.

Another thing...
Anytime you swap overlays, it doesn't hurt to just wax the WWWCACHE clean from your desktop before launching CAB...just in case old cache data in there is confusing the new OVL.

Finally, if you're using a proxy server, try it without and see what happens. I saw an earlier post that said ditching the proxy for CAB worked for him.

Good luck,
Brian

Charles was also one-half of the Codeheads (the people who brought
us Warp9 , Lookit & Poppit, MIDI Spy and Hotwire). Unfortunately, he and his
partner have ceased all development of their titles, although for a
time they also allowed for some customer support of their titles
regarding advice. They certainly don't have very nice things to say
about Atari these days (apparently Atari didn't consider them "serious
enough" to be considered for a developer's Falcon, which is odd, since
many of their software packages fixed flaws in the operating system and
made the computers even more enjoyable to use!).

These days (from what I last heard) Charles mostly is concentrating
on his musical talents, including his on-going gig as guitarist in
singer Al Jarreau's live band (I kid you not!). I've met him, and he's
a pretty good guy, but with a bit of a temper.

I know Nima at Homa Systems House has available software for two
families of scanners - one is Hewlett-Packard's line. I think System
Solutions has drivers for the Epson scanners.

I also notice that the PARX drivers (for use with BitMapView 4 and
Positive Image 2) have a number of files which are described as being
for Mustek scanners. Can you really drive a Mustek from within these
two programs?

I'm also currently budgeting for a scanner around Christmas for my
Falcon, so any discussion on this thread would be greatly appreciated.

Yes.

>and software... For both ST and PC.

If you get the Ghostlink package there is a host program for the ST
and a slave for the PC.

When set up you get an icon (on the ST desktop) representing the PC HD
partition. You can do all the usual desktop file operations with it
(open, delete, copy, move).

I wish I could use my Visioneer PaperPort for Mac on my Falcon. It
connects through the Mac Serial Port. Perhaps a driver could be created
that would work with HS-Modem and STiNG. I use it with my SE/30. If I
could use some of the peripherals of the Mac on the Falcon, I would get
rid of the SE/30.

Not yet, but you never know ;_)

>Then, of course, there's also the matter of what software I'd need to use it on
>my (standard) Falcon.

Homa in Canada can provide a variety of software to drive a limited number
of flatbed scanners. Other than that, AFAIK, only System Solutions in the UK
can provide you with GT Look software for use with certain Epson scanners.

>Anyone got any suggestions about what type of scanner to get and how much I can
>expect to pay, please ?

There was a colour hand scanner for the Falcon produced some time ago. But
I don't know anyone that has one. It was about 400 quid new!

Currently I am trying to persuade one of the UK Atari vendors to start
supplying flatbed scanners, and we could obtain suitable software from Homa
or someone else. It's early days yet, but I'll post something here if
there's any result!

Hopefully, a suitable flatbed scanner could be obtained for under 200 quid,
with perhaps another 50 quid for software. That's my hope anyway!

Best regards
Mike Kerslake

I don't know if he's on the Internet, but I do know he stopped developing for the Atari a few years ago, so it's extremely unlikely you'll see an update. (FYI, he was also a partner in CodeHead.)

Both crash horribly for me - I've had to go back to 1.12 :-(I don't
have Teradesk, so it's not that. I'm interested that you can get some
pages - I've not even managed that. When I tried 1.26 the screen
filled with rubbish when it tried accessing a file... 1.25 just gave
error #600 (I think).

>available for the ST (which works with STiK)?
>I.e. "Telnet", "duFTP", "Newsie", "Finger", "Antmail" etc..

This sounds very unlikely to me! The fact that ASH are supplying yet another TCP/IP stack (we already have STiK, MiNTnet with GlueSTiK, ICE if you can count that, TERMITE if it ever turns up, and now PPP Connect), causes big problems!!

As far as I'm concerned, STiK is the standard Atari TCP/IP stack. It has all teh clients written for it (the ones you've listed, plus of course POPwatch and News Hound).

The rumour I heard was that there would not be any programming docs for Termite, and I'm guessing that the same would be true of ASH's product.

As almost all current TCP/IP clients (listed above) with the exception of CAB are shareware/freeware, if you buy/rely on one of the commercial stacks then you are indeed truly buggered. :(You will have to rely on buying the vendor's email, ftp, news etc. clients.

The good thing about STiK/STiNG is it's FREE. And almost more importantly, the docs on how to program it are FREE. Hence the abundance of FREE STiK clients.

I personally will always write STiK compatible clients (unless the other stacks issue FREELY programming specs). Even then I'd have to buy the stack to be able to test my programs with it. And I sure ain't going to buy every stack available.

AFAICS, the only reason other stacks are emerging is because of the lack of PPP support in STiK. If only the relevant people could get a PPP version of STiK/STiNG out to the general public then STiK *would* become the standard and *problem solved*. I like everyone else am tired of the *coming soon* approach :(

As I've posted elsewhere, Goodman's PD library in the UK has available a /TOSCHANGER/ disk with a loader program for TOS 1.0, 1.2, 1.4, 1.62, EOS 1.42 and KAOS 1.40, all of which are supplied on the disk. So is STOSFIX, ADDMEM, BOOTPARM, HDDELAY, DCSEA220, DCX220B and DIRSORT. Unfortunately to squeeze all of these in they had to use an 83-track format originally, which doesn't seem to have been copied to the release disks (and my drives couldn't read it if it was there in any case!), However, all that is missing is the end of the INSTRUCT.DOC file, and one can live with that...

Regards
Peter

Hi Roger!

No, I didn't - as I wasn't aware it was a spam-busting address. So it should have been brankrob@svet-el.si ? Anyway, I hope he read my message in this usenet topic - or doesn't he get that? If so, I'll re-send it to the corrected address after I hear from you.

r> I recommended Scooter to Branko and gave him your e-mail address. He
r> wrote back to say that he was not impressed with the demo of Scooter
r> he had seen and that Platon was released on 23 (!!! yes 23!!!)
r> floppies. One helluva system!

I wonder what was on all of them - extra component libraries? What kind of a system does it need to run it? One of the beauties of Scooter-PCB is that it can be run on a 1MB machine with just a floppy drive (2 will make things a little easier, a hard drive much faster, but it is usable in the basic config!). And any idea what Platon can do that Scooter-PCB can't?

For those who know sio2pc for the atari 8 bit, I just want to do the same with the ST : transfert the ST disk into disk-image in the PC and use the hard disk of the PC as if it is the HArd disk of the ST.
What do I need ?
Hardware... (just a null modem cable ?)
and software... For both ST and PC.

I am really new to the ST scene so please explain me...

THANKS A LOT FOR ANY HELP.

After 36+ Months of Intense Labor our Over Due Baby/Rev. 10 Best
Electronics All Atari Parts/Reference Catalog has Arrived.
This New Rev. 10 version Catalog/Atari Reference Manual is Over 4
Times the size of our last catalog (June 1991) and has Many
Interesting New Features! Just to Tickle your interest here are just
some of the Features: A Catalog Index!, Easy to find Item/Product
format, 55+ Best Technical/Repair Tips covering ST, 8 Bit and 2600 5200/7800
Atari Products, 90+ Best Informative Information Tips, Over 330+ Pictures of Atari
products (last catalog had 137 pictures), Over 2000+ New Atari part Numbers/Products,
Expanded Listing and Descriptions of 8 bit Software Titles, An Atari Memorabilia
Picture Museum and Complete Atari I/O Connector Specifications on just about
every Atari product made! As we start an Unprecedented 15th Year in the Atari
Computer Parts business, Our New fully Computerized Accounting
System has had all of the bugs worked out, so each customer will Now have a
Unique Customer Number for easy Item Inquiries, Order Processing, Invoicing also
we can efficiently Track our 4,000+ Line Item Inventory! The Unique Best
Catalog which is Now Shipped World Wide to Atari end users and Dealers alike, is
priced at $7.50 (Actual Cost to Produce only) (California residents must add
your local 7.25% (.54), 7.375% (.55), 7.50% (.56), 7.75% (.58), 8.25% (.62) or 8.50%
(.64) cents sales tax to the total and $3.00 U.S. Priority Mailing. So if you would
like to get a hold of a Hot off the press copy of our catalog, just
send a check to

Best Electronics,

1457. FS: Atari 1040 STf $42 *or* SC1224: $48

Newsgroup: comp.sys.atari.st
Date: 1997-08-03 00:00:00 UTC
From: Bill Frandsen <bfrandse@rrnet.com>
Message-ID: <01bc9fc7$f2c16480$62b70bce@pac-man>
Source record: 118929
Cross-posted to: comp.sys.atari.st,rec.games.video.marketplace

I have an Atari 1040 STf computer available for sale. The price
is $42 plus shipping costs.

The unit has been cleaned inside and out (no dust bunnies
or caked on dirt+grease on the keyboard). The unit turns on,
and since I don't have any system disks to test it with,
it will boot into the rom bios within 30 seconds or so.
Connecting a generic joystick to the mouse port and
repeatedly pressing in each of the four directions moves
the mouse as expected.

So, everything seems to work as it should---HOWEVER,
since I don't have any disks to test the floppy drive out
with, I cannot guarentee that it works, but the rest of
the system is tested an works fine.

Included is ONLY the bare keyboard/cpu console,
no additional cords (generic a/c line cord, video cord,
etc..) are included. I do have the instruction manual
for it however and will include that.

I also have for sale an Atari SC1224 color monitor for use
with the above computer, for $48 plus shipping costs.

The monitor has been cleaned on the outside, and spot
cleaned (removal of dust/etc..) on the inside. The tube is
in excellent condition, and when tested with above computer
looks good. Included is ONLY the monitor and the special
video cord to connect to the 1040 ST computer. The
generic A/C line cord is NOT included, which, like the
computer, can be purchased most anywhere for < $5.

Buy both together for only $85 plus shipping.

- Shipping via USPS priority/parcel mail or UPS ground to lower
48 U.S. states ONLY. (sorry, I cannot ship out of country)
[UPS ground only if there is no strike]
- Buyer pays all shipping costs.
- Prepayment required in form of personal check or money order.
- Multiple references available upon request. I've been selling
extra videogame carts in rec.games.video.classic for over 2 years.

Thanks much. Please email with any questions.
bfrandse@rrnet.com

If you have access to either a Mega-STE or TT, there are spare
serial ports which can be used with a proper driver to allow
PC mices to be used. Drivers can be found on most FTP sites.

Terry May (Terry.May@rebel.ronly.org) wrote:
: o What happened to the v5 manual? It came with a v4 manual and no update docs
: (except for a short readme, talking about VFAT). Not very professional.

The distributor is responsible for the English or French documentation. The amount and quality of the documentation differs from country to country.

: o Is there any way to autoboot a program in parallel, such as Semper? I know
: about #_AUT, but that's not what I want.

Either put all necessary files (prg and rsc and inf) to /gemsys/magic/start (or wherever your start folder is) or put their aliases there.

: o Is there a function, such as on the Mac, for cleaning up the desktop and
: neatly aligning all the icons?

You can define a desktop raster. There is no function to clean up existing icons.

: o MagiC apparently boots in ST-Med. Is there any way to change that? I don't
: mean the desktop, but for the AUTO folder loading/display.

This depends on your computer.

: o I only have one parition set up so far for long filenames. Sometimes the
: file selector uses short names on that partition and sometimes it uses long
: names on my other partitions. Is this a known bug? Will it go away if I go to
: long filenames on all partitions?

Some programs support long filenames, others not. The file selector knows this and shows either long or short filenames.

: o Any way to save the sort mode (e.g. Type) in the file selector?

Not yet, but I am working on this.

: o Is there a freeware/shareware solution for adding/changing icons? I know
: about Interface and it's a great program, but I can't afford it right now.

adding icons: Just put the RSC file into your RSC folder.
changing: I think, there are other RSC editors. Magxdesk uses standard RSC files.

: o Is there a boot manager which directly supports the MAGX.INF file the way
: Stoop supports NEWDESK.INF? That is, change the screen size and colors of a
: single file instead of keeping a separate file for each resolution?

Why? Magxdesk works independently from the actual resolution. All coordinates are automatically transformed.

: o Does SAM not work with MagiC or is it just me? I get the startup sound, but
: nothing beyond that.

I do not know this program.

: o And finally, what is <frei> in the application manager and why are all those
: extenders assigned to it? Can I delete, say, the *.CP? extenders and reassign
: them to Cops?

Yes.
"frei" is German for "free" and means, that a data file type is not assigned to
any application.

: >things every time.

MiNT is, if you like, a replacement for the TOS operating system. So is MagiC. Normally, you cannot have two operating systems running at the same time, yet this is what you are trying to do (to simplify things somewhat).

It is not a question of whether MiNT is "MagiC compatible". They are two different OSs (to put it simply) and of course they cannot both run at the same time, in the same way as you cannot run Linux and TOS at the same time or Windows and OS/2 at the same time etc.

(I have heard of someone using MiNT "under" MagiC, but I cannot comment on this since I don't have MagiC.)

: >So then I to boot without MagiC and it seemed to work better. After the

: >
: >After that things seem to be okay, but they're not. First of all my "Thing"
: >desktop's parameter's aren't loaded since all the icons are in different
: >places and none of my configurations are included.

Thing tries (like any sensible app should) to load its configuration from the user's home directory. It is likely that you inadvertantly set your home directory differently when you installed MiNT, and so Thing is not finding your configuration.

: >Then I tried to exit "Thing" to get into the usual TOS 2.06 desktop, but
: >that resulted in all filenames being shown in lower case and I couldn't run
: >any programs. The system obviously though any file was a text file or

: >Argh!!!! If this is what MiNT does to your system I'd rather wait for
: >STiNG, STiK to get PPP or buy the PPP dialler/CAB from Application Systems
: >Heidelberg (ASH).

I never observed this problem myself, but I have heard of it before.
Perhaps someone else can comment on it in more detail.

: >Anyone have more positive experiences than I just explained?

I use MiNT all the time and would never be without it now. You must
understand that MiNT is not simply PPP internet access software, MiNT is,
if you like, a new operating system for your computer. TOS software can
still run under MiNT while all the new features are still available. There
are many new features under MiNT, one of which is network support (with
the aid of MiNTNet). Others include loadable filesystems and device
drivers, support for more advanced filesystems (including long filenames,
hard and symbolic links etc.), preemptive multitasking, memory protection,
multiuser capability (similar to UNIX) and much more.

For me, these features are very useful and I would never do without
them now. MagiC does support some of the features of MiNT, but not all
(for example memory protection is not available, and there is currently
no equivalent of MiNTNet available).

: I didn't have any better luck than you. If I remember right it cannot be used
: in a multitasking system. Anyway I thought I seen that in the docs. I can't use
: it on the Afterburner as it must load old GEM, and the A/B already does that.

MiNT is a multitasking kernal, so it is somewhat illogical to say that it
"cannot be used in a multitasking system", since MiNT is a "multitasking
system." Using MiNT implies that you are using a multitasking system,
because that's what MiNT is!

I am unfamiliar with the Afterburner, but I can see no reason why MiNT
would not operate with it. Perhaps you could clarify what you mean about
the old GEM.

Terry May (Terry.May@rebel.ronly.org) wrote:
: o Anyone have any success with AUTOMOUS.PRG (Mouse-Ka-Mania II)?

I do not know this program.

: o Any way to configure WBDAEMON?

There is no necessity to configure anything. You can activate write back caching
by putting this into your START-folder (usually /gemsys/magic/start).
Some people report problems with WBDAEMON. But in all cases bad hardware seemed
to be responsible for problems. I had never any problem on my old TT, the falcon
seems to be "critical".
Further, you should install a disk driver that is capable of background DMA
(e.g. HDDRIVER).

: o If I create even one long filename, Diamond Edge 2.03 reports a "Corrupted
: Directory Entry" and shows me a folder that looks like a bunch of garbage. If
: I tell it to fix the problem, I lose my long filename and am left with the
: short filename that MagiC created. Is this an incompatibility with Diamond
: Edge, or is VFAT really corrupting partitions?

This program never heard anything about long filenames and the way Microsoft
implemented them above the existing FAT file system. For such old programs the
long filenames seem to be bad directory entries.

1470. Falcon Memory: 4 to 14MB?

Newsgroup: comp.sys.atari.st
Date: 1997-08-04 00:00:00 UTC
From: Michael Clemmetsen <michael.clemmetsen@sunderland.ac.uk>
Message-ID: <33E5C439.646A0CD4@sunderland.ac.uk>
Source record: 118844

Hi,

Could some one explain the difference between a 4MB and 14MB Falcon?

I was wondering how much it would cost to upgrade a Falcon to its full memory spec. The manual just says that the memory is 32bit wide, does this mean that there are four 1MB simms that can be replaced by four 4MB to give 16MB (14MB useable)? Or does a 14MB Falcon have a different motherboard meaning that third party memory modules need to be bought?

Thanks for any info,

Michael

I suspect that this is the famous 40-folder-bug. Try running
FOLDERnnn.PRG from the AUTO folder.

Greets everyone. I have a real problem on my hands. I was using MagiC before
I got my AlberTT card. When I recieved it, the card only works with TOS.
I am pretty sure that I know some of the reason for this. It is because in
TOS the driver is an autofolder program and steals vectors and replaces them
so the computer drives the card in a higher rez. Now in MagiC, MagiC says
no because it uses video drivers and wanted a standard video mode.
This card does 1024x768. It works in NVDI if you run the driver first.
In MagiC, when the driver loads in the autofolder, you see auto programs load
until it goes to load the AES and then it stops. This is MagiC 5.1 I have tried
I have not tried any others. Please help me as 4 megs just isn't enough for
this MiNT/N.Aes/Jinnee setup. Thank you very much.

IMO they are making a great mistake, if this PPP connection only work's
with CAB. Let's hope not.

I do hope that I still will be abel to use a client from inside CAB, -
NEWSie for one. Or any ftp program.

If not, I will think twice before buying the new upgrade. It's a shame
because it really do like CAB.

cheers

That's right, it works for me. I had problems with every OVL file after
v. 1.18, no one seems to work, until I switch off the http proxy in CAB,
then everything is fine, except it now seems to mix up some cache files.
When I use Cache Ed to copy files from the cache to another folder, it
mix up some of the files, give them wrong file names etc.

Don't know why?

cheers

If you're talking about copying from one hard drive to another, just
attach both drives to one computer, and copy that way. No other approach
will be faster.

Gary Priest (gary@the-gap.demon.co.uk) wrote:
: In article <33e2b2d832a97e3@sn.no>
: TCP/IP stack (we already have STiK, MiNTnet with GlueSTiK, ICE if you can
: count that, TERMITE if it ever turns up, and now PPP Connect), causes big
: problems!!

I do never believe anything till it turns up, especially in the Atari
market. Till, now TERMITE is just vaorware. the last thing I heard (in
this group) was that "...they had encountered proomblems with the Atari
version and do a survey if there is a marketplace for it" ;-)

: As far as I'm concerned, STiK is the standard Atari TCP/IP stack. It has all
: teh clients written for it (the ones you've listed, plus of course POPwatch
: and News Hound).

: The rumour I heard was that there would not be any programming docs for
: Termite, and I'm guessing that the same would be true of ASH's product.

ASH officials already said, that there would be a free programming
documentation available. On another note, it should be said that the price
for CAB with PPP-Connect is the same as before with CAB alone. Also, a
commercial package (which, BTW, is still less than some shareware
programs) will provide the Atari community witzh much more possibilites to
rightfully ask for improvements and new versions insstead of the old
"..didn't find the time" approach.

: As almost all current TCP/IP clients (listed above) with the exception of
: CAB are shareware/freeware, if you buy/rely on one of the commercial stacks
: then you are indeed truly buggered. :(You will have to rely on buying the
: vendor's email, ftp, news etc. clients.

I do not think so. IMO it shoud suffice to program sth. like GlueSTIK and
the problem is solved.

: The good thing about STiK/STiNG is it's FREE. And almost more importantly,
: the docs on how to program it are FREE. Hence the abundance of FREE STiK
: clients.

hence also the long time period one has to wait for PPP support.

: I personally will always write STiK compatible clients (unless the other
: stacks issue FREELY programming specs). Even then I'd have to buy the stack
: to be able to test my programs with it. And I sure ain't going to buy every
: stack available.

I do not think that there will be abundant stacks. Some will exist and
work, others won't. Eventually, one of the stacks will be more stable,

easier to configure and drive the others out of the market.
A price tag of less than half a music CD won't make the diifference to
"free" stacks, if PPP Connect works and performs as it is promised.

Alfred

1484. INFORMATION FOR SEQUENCING ON ATARI

It's WB Systemtechnik GmbH (http://members.aol.com/wbsystem/index.html).
Their LINK97 host adapter is the only host adapter supporting initiator
identification which makes it possible to use any SCSI/SCSI-2 device.
With other host adapters drives like the Quantum Empire or Fireball
won't be recognized. These drives require the computer to have its own
unique SCSI ID and the LINK97 provides this ID for the ST/STE.

>motherboard meaning that third party memory modules need to be bought?
>
>Thanks for any info,

Okay, a lot depends on what kind of memory board you currently have. If
you have the standard Atari 4-meg board, you will have to get a new board
that uses either 4 4-meg SIMMs or a board that uses 1 16-meg SIMM. If you
already have a 3rd party memory board, and it has 4 1-meg SIMMs/or 1 4-meg
SIMM, then you can replace the 4 1-meg SIMMs/1 4-meg SIMM with 4 4-meg
SIMMs/1 16-meg SIMM to get a "useable" 14 megs of Ram. Not too hard to
follow, I hope...! :)

PS Of course, there is the Atari 14-meg memory board
floating around, but I don't think you will find
it for sale at very many places. Oh, my Chro-Magic
Ram-Gizmo board with 16 megs of Ram came to $149.00!

>could help me out.

I, like you, Hallvard, liked the look and feel of STiNG and persevered with the configuration to get it set up. "Most" of the time it worked OK but I had problems with dropped/corrupted data. I spent a lot of time fiddling with HSMODEM, Serial/Modem ports etc. etc. to try to put this right. I wrote to Peter R. and he told me that the current version of STiNG was a bit fragile and was probably the cause of these errors. I switched to STiK which works reliably so have been able to concentrate on getting the clients to work well.

If I was you I would use STiK at least until the next version is released which may remove some of the problems. When you are starting something new and as complex as web etc. you want to eliminate as many causes of error as you can until most bits are working.

>"DNS cache failed !!!"
>
>What have I done wrong?

When you first start the STiNG system there will be NO DNS cache which is why you get this message. After you have made a few connects you will find that a cache file has been created and you will no longer get this message.

I'm not sure we are talking about the same program. I'm talking about
Platon, which full version was released on 14 (or was that 22?) floppies
and in the package was full Schematics, PCB, Autorouter, PLD....
All together with library of some 5000 elements. Even demo worked
magnificiently, but on ST it was very very slooooooooooow :(
This was probably because of massive floating point calculations, which
bogged poor 68000 down. Friend ran Platondemo on his MEGA STE with FPU
and it was MUCH quicker (much more than twice), although still slow.
On ordinary ST with 4Mb RAM it took well over a minute for panning of
the screen left or right !
Demo was on 3 floppies, so most of the programs capabilities were
missing.
A year after that, friend showed me PCAD 7 for the PC and he forgot to
close his mouth, when I showed him Platon-demo....

> also acts as the agent for this version. You can contact him on

> xlator@cix.co.uk

Scooter is nice, but far inferior to the PC's TANGO (DOS), which you can
get for a dime around here. At least the last version of Scooter I've
saw
was only PCB program, without anything else, except maybe small
autorouter. It also lacked possibility of working in color, so even if I
decided to make some magnificent color overscan and persuaded TOS to
accept it, for Scooter it wouldn't matter. I could byu a separate color
version, but that wouldn't work on ordinary ST in monochrom res.

Thanx Howard,

But I have two seperate boxes with their own DMA->SCSI cards and I do
not believe that SCSI arbitration is supported on these. I would not
like to disassemble the boxes to add a second drive to the other and
then reverse the process.

Best regards Don

Source record: 118732

Friends,

After months of trouble-free use of Antmail, Newsie and Popwatch, my provider moved their mail database to a new server over the weekend. Since that time, none of the above programs will connect to the mail server.

StiK connects just fine. Forecast works just fine. CAB works just fine. Newsie connects just fine to the news server, but not to the mail server.

I will say that I had some trouble using the same account on the Ethernet-connected PC at work yesterday, too, but mostly it worked fine there.

Antmail yielded the most useful message, which was something like "Username/Account rejected."

I will obviously be calling the UW-Madison help desk, but since they don't speak Atari very well, I thought I'd ask for ideas here. Any and all are welcome. (please post here; I can probably get the email at work, but it's not certain.)

Thanks,

Years ago I heard about a MIDI port network. Not sure if anything
came of it, but itd be about twice as fast as the 19.2k serial ports.

That would be Duet. It exists, and it works. (May be shareware).

Just because you filled the 'Subject' line, doesn't mean you can't write a real message ;-)

Anyway, you can't convert a PC mouse to make it an ST one. If you can spare the serial port, and if it is a standard serial mouse, you can get mouse25.prg, which is a software serial mouse driver.

Some Amiga mice can be converted, but I don't know how.

Of course there are. It's just a matter of knowing where to look. Do a web
search for CAB and WENsuite. CAB 2.0 is commercial, WENSuite is a demo, and
CAB 1.5 is shareware.

Take a look at the Network directories in the main atari FTP sites
(ftp.lip6.fr for example). There are quite a few little programs that will do
this. You can also do it through MIDI cables. This will probably be a lot
faster.

No such thing, I'm afraid! There was good old Spectre GCR, but it was
commercial and needed a cartridge. It is very hard to find nowadays and
only ran System 6, but emulated very well a Mac Plus.

>

The pinouts of the ST monitor can be found at several places. There is a link to them somewhere in the Quick FAQ. VGA pinouts can be found easily with a quick search on Yahoo or Altavista. There are DIY instructions out there.

>Is there a FAQ for the ST series? I would like to give the old fellow
>some more ram, but I haven't looked inside to see if it will take a simm
>yet.

If it's an STE there are simm sockets. Otherwise you'll need an expansion board. There are DIY instructions for this too.

Most of your questions have answers in the Atari ST Quick FAQ. Check out my sig below.

>Thanks for any info,
>
>Michael

That's it. The falcon does not use simms as standard. You need either a 14Mb
memory board or a simm memory board and a 16Mb simm (the extra 2Mb are not
used). If your 4Mb machine has a simm board fitted, you can probably expand
it that way.

This group is not moderated, so no moderator will ever send you anything :-)

There is a general purpose Quick FAQ (my one actually) mainly for newbies.
There are pointers towards the older and, sometimes more complete, FAQs
maintained at Hallvart Tangeraas' site. The address is below, in my .sig

1515. SM124 or ST problem?

Newsgroup: comp.sys.atari.st
Date: 1997-08-05 00:00:00 UTC
From: goodkenwin@aol.com
Message-ID: <19970805163401.MAA15917@ladder02.news.aol.com>
Source record: 118745

After the ST warms up, my Sm124 will go blank, and then the computer will gop through a reboot mode. I thought this might sound like a power supply problem, but when I switched monitors to my moniterm, the problem goes away.

Any ideas? Thanks

Ken

Hello everyone,
In my previous message, I forgot to mention that my old e-mail addresses
don't work.
All addresses like claes.holmerup@p5.dada.ct.se , claes@dada.ct.se and
others referring to the BBS "dada" aren't valid any more since the BBS has
closed down.
Instead, you should use claes.holmerup@mailbox.swipnet.se , and I'll be able
to read the mails. Also, check out my homepage - it may have changed a
little since you last visited, as it's being updated a little at a time...

Best regards,
Claes

>>>for download straight from Fugizone and proclaims that no one really
>>>cares about software piracy on the ST..

Perhaps addressing this to Jon might help matters?
But he does at least put it under the emulation heading.
I know how much work he puts into that site and how much I helped him
out and still do, so it's a shame to see it boycotted because it
covers another area of "Atari" in its global sense - piracy has always
been part and parcel of the ST scene, it didn't kill the ST and if
anything those original menus will re-vive the scene via PaCifiST. I
don't see anyone offering stuff like Calamus for download, all the
"serious" software is being left well alone, people want PaCifiST for
one thing and one thing only - games (and nostalgia)

>>I just checked'em out. Well, I see what you saying. Unfortunately, it seems
>>some PC users with emulators don't respect the intellectual property rights
>>of JTS. Surely, Atari Corp. wasn't an icon of virtue, but this doesn't give
>>people the right to walk all over everyone concerned. JTS receives about

intellectual property rights with regard to??? I assume you are
talking about the TOS ROM images? I've told Jon about this already
and he's going to change it (if he hasn't done already) But who
actually owns the real copyright on them?

> True...I also am a little peeved at the way FIJIZONE are proclaiming
>POMPEY PIRATES to be the saviours?.. they seem (no ARE) saying that
>such software pirates are great and always have been and are helping
>ATARI ?...

They arn't the saviours of the ST, but their menus sparked off more
interest in ST Emulation than anything else has before it. The piracy
scene on the ST (and indeed the Amiga) gave birth to some phenomenal
software and talent being unleashed. It's strange how people can care
almost so violently about piracy on a machine they love and yet
probably wouldn't give a toss if they knocked off Windows95 on every
PC in their household, copied Word97 from a mate, installed the latest
games without thinking twice, burned their own CD's, etc etc etc.
Tell me you havn't seen it done? go on..

> I know at least three long standing UK public domain libraries who
>are trying to stay afloat by selling Commercial games that are
>LEGAL..and bought in good faith from ATARI users who also bought them

>originaly and legaly, what chance have they of earning an honest
>living while pages like Fujizone are activly supporting software
>piracy?

Actively supporting emulation of Atari's. The games usually download
as ST image files, a file that a real ST would spit back out again
going "what the hell?" - only if that file is converted back into an
MSA format and then back onto a disk could it run on a real ST. Bear
in mind they'll need a PC to convert it with of course. Anyone willing
to go to these lengths is a rather determined little fellow & quite
possibly not likely to purchase an original if it bit him on the arse.

>>$14,000,000 a year in royalties which help to support their efforts. I think

royalties from software houses selling games? even Ocean claimed to
have zero stock left of most of it's Atari ST software, so who's
selling what? I resale of original software AFAIK is actually illegal
in this country if you want to get picky about it.. doesn't stop it
happening though.

>>we all should hope that JTS succeeds. They make great HD's and the future of
>>Atari developers who pay for these rights are being infringed upon. I hope
>>that some of those who *think* Atari is dead don't get they're wish...

I'm sure the Atari user base will thrive on for many more years to
come, but I'm sure the Atari EMULATION user base will surpass it
eventually.

> Yes its a little sad that they are actualy giving the TOS roms for
>download with PaCifiST...the pacifist release does not come with such
>roms. so FUJIZONE have added the roms to the download package..:(

As mentioned before, Jon will be removing them from the archive. It
wasn't a very good idea to have them in there in the first place as
Frederic states quite clearly he doesn't want the archive changed in
any way.. but there we go. Live and learn.

> I ahve PaCifiST installed.. and manage with not one single pirated
>game.. but then again I dont have anby games on the ST either :)

says it all really..

those that are downloading the games are those that have been
introduced back to the ST who left it many years ago and who now own a
PC instead. Emulation breaches just about every conceivable
convention there is, you can download a perfect Gameboy emulator with
every game ever released - Nintendo havn't stopped that yet - you can
even download complete arcade machine emulators, rom's 'n all. PC
Engine, Genesis, Super Nintendo, Commodore 64, Atari 2600, VCS,
Vectrex, ZX81, Spectrum, Amiga, Amstrad and on and on and on and on.
The ST is just the most recent "victim" to the emulation craze, it's
going to make no difference to *real* ST sales of anything because
those into emulation usually arn't into the original machines any more

- hence the need for an emulator!

PaCifiST bought me and many others *back* to the Atari world.

Rich

Hi there,

Does anyone know how to print LEGAL (8.5" X 14") documents with Pagestream 2.2 using the Deskjet 2.1 driver (for a Deskjet 500C)?

Nothing I do seems to work, including inputing the correct size as document and in the printer configuration page. The docs always print to 11" and stop.

Any help appreciated,

Stephen Angelini / trax@cedep.com

Hi

I can only speak for POPwatch (as I am the author). POPwatch is complient
with the POP3 RFC's. It is also complient with the SMTP RFC's and handles
ESMTP too. If you are having problems with POPwatch, turn it's logging on
and send me popwatch.log! You must be certain that your ISP's new server is
a POP3 server??? Some providers provide SMTP servers and *not* POP3!
If your ISP's server *is* a POP3 server then POPwatch certainly *will* work
with it!!

Speak to your ISP, send me a log file, and we'll sort it out :)

It sounds to me like a simple case of your account name/password being
incorrect!!!!

Regards,
Gary

I used to use GEM RCS 2.1 even though it had some bad bugs. Fairly recently
I discovered V3.0 which is quite good. As an alternative, ORCS can be recommended.

> I thought the Falcon had standard baud rates. What is it missing that people
> need?

Thought so too. AFAIK it is only one of the TT's serial ports which has buggered higher baudrates (153 kbps instead of 115 kbps and 230 kbps).

> ..can these Mod2 mods be done on an STf?

What for, the STF has only Modem 1 which cannot do more than 19200 bps, and all it can is standard baudrate. The hardware patches available for Modem 1 all aim for proper higher standard baudrates.

Unfortunately there are many older versions spread about, and it sounds as if
you got one of those. You did not mention any FAQ ? Generally it helps people
a lot with getting online. It's in the distribution for quite a while already,
but of course not in old ones.

So I suggest you get the newest version from my web page. You might even find
the hint interesting I wrote to you in private mail.

> I'm a little confused...

>
> "DNS cache failed !!!"
>
> What have I done wrong?

This proves you either haven't got, or intentionally ignored the FAQ ;-)

This error is more a hint. It's written by the resolver that no cache exists
as yet. The cache file is written automagically later on by the resolver. So
you can safely ignore this.

Yep, only "Delay" and "Active" have any setup meaning, the rest is merely
looking up which modules and which version numbers are installed.

> -"StiNG port setup" CPX; There's also an "Active" box here, it seems that

> disabled before I save the settings?

I know this should all be in the *.HYP file, but I haven't had the time yet
to write it all down.

You should install it, but you'd seldomly use the Port Setup CPX, unless you're
setting up a LAN. For using STinG only for connecting your machine to Internet
via a modem, you'd rarely touch this CPX, as all the work is done by the Dialer.

Go through the DIAL.SCR, it contains plenty of hints on what to do which each
setup item. You can set all of them in the Dialer's Config too (don't forget
to click 'Accept' afterwards), but you should have read the *.SCR before to
get an idea what the strings and numbers mean.

The bit on the routing table is important, as this feature is still missing
in the Dialer. STinG has to know where to deliver the data. So you need to
supply a line of text in ROUTE.TAB. Use an editor that distinguishes TABs and
SPACEs, as they got different meanings in this file. STeno is a bad choice !
The file contains four entries, separated by one or more TABs (!) each. For
just having a single connection across a phone line, put 0.0.0.0 as the first,
second, and forth entry. The third entry is the port name your modem is connec-
ted to (the same port name you told the Dialer to use). On a Falcon you'd put
"Modem 2" here (without quotes). Note in front of the "2" is a SPACE !

> -"StiNG protocols";

You normally do not need to change anything here. It's mainly for fellows who
really know what's the difference between TCP and UDP :-)

> -"ICMP" is left blank, i.e. the "router control" and
> "address mask control" is disabled (not crossed)- should I change this?

No. Leave it uncrossed.

> -"Resolver"; I've entered the following in the "nameserver"
> part (based on the info from my provider); 194.143.8.25 and 194.143.8.27

The numbers will appear there automagically, if you put them into the DIAL.SCR,
and built a connection with the Dialer.

> -"TCP"; I haven't changed anything here, the following values are used;
> "max segment size": 2000
> "receive window" : 5000
> "first local port": 1024

> "default TTL" : 128
> "initial RTT" : 0.050 sec
> The "evaluate ICMP messages" is enabled (crossed).

That's alright.

> -"UDP";
> "first local port": 1024
> "evaluate ICMP messages" is disabled (not crossed)

Suggest you cross the "Evaluate ICMP" here, still if you don't this won't prevent operation completely.

> I've also edited the "sting.inf" file in the AUTO folder (where "sting.prg"

If STinG loads all the modules, then this is fine ...

It works very well, actually. It didn't like one of my long filename
partitions, but that's okay. Diamond Edge has lots more features, but this
really does optimise long file named partitions. Good program, I think.

Hallo Hallvard,

"DNS Cache Failed" is probably an AUTO folder conflict. Sting.prg likes to
run last in your auto folder. For example:

nvdi.prg
drvin.prg
scc.prg (falcon)
sting.prg (last)

This should solve the DNS message. As for your other problems, well, I figure
you just have to take'm one at a time :)

Regards,

Charles

1532. (2) Two questions...

Newsgroup: comp.sys.atari.st
Date: 1997-08-05 00:00:00 UTC
From: quantum@leba.net
Message-ID: <5s68ko$8gn$2@newton.leba.net>
Source record: 118762

Hi, I had two questions I was hoping some brave soul could help answer. First, I"m trying to hook my parents up with a computer cheap. Since I still firmly believe any PC running anything other than Linux is evil (and they're too illiterate to even use it) I'm trying to steer them to the Atari world (yay me!). Now, they only need to run one piece of software which is available in Mac and PC forms (it's a program for the Girl Scout cookie drive which my mom is active in). My question, what software is there to run Mac programs on an Atari? I know MagicMac goes the other way around, Atari on a Mac, but what runs Mac on and Atari? My other question is simple. I'm looking for a simple freeware graphics editor capable of two things: the ability to draw text with graphics, and saving in any standard format (Degas, Gif, as long as Gemview can convert it). Why freeware? Well, mainly because I'm a poor college student who can't afford anything really cool :)

Thanks in advance for any responses (via email, s'il vous plait),
George

Systems for Tomarrow and a few other dealers have not the Atari brand,
but it's suppost to be even clearer of a picture then the TTM monitor
for like $299 + s/h here in the USA. Had considered one for awhile,
but just sold my TT to make room for our soon to arrive baby (02/98).
E-mail if you need the address of there web page.

I think what Howard means, Don, is that you take one of the drives
onto the SCSI bus which supports the other (making sure they have
unique IDs, of course). So you don't have 2 ACSI stacks attached -
just the one but with 2 devices on it.

Actually, it's a very neat solution provided it's not too much trouble
to get at the respective SCSI busses. Wish I'd thought of it :-)

They also offered software for the Microtek Scanmaker scanners for $49,
in the UK a Microtek E3 (which should be more than good enough for this)
costs 160 quid from Dabs Direct (0800 680000), I suspect you will need a
SCSi adapter like the Link though.

1541. Re: Platon (PCB design)

Newsgroup: comp.sys.atari.st
Date: 1997-08-05 00:00:00 UTC
From: Branko Badrljica <brankob@st-el.si>
Message-ID: <33E6F047.294C@st-el.si>
Source record: 118878

Hello Peter,

sorry for not answering your NG message (I must have overlooked it).

First, I would like to clear some misunderstandings. I didn't ever saw Platon in full version, I've read about it in some magazine (STMagazine?).
Second, I didn't say that it was on exactly 23 disks, I said that I remember article mentioning unussully high number of disks for full version. It was something like 14 or 21, as I said, I don't remember exact number.

Several years ago I wanted to upgrade my ST into some kind of workstation for CAD PCB. After byuing some parts (eg. SCSI disk) and making on my own some others (eg. color multisync out of EGA monitor) I decided to look in several magazines about PCB CAD software for ATARI.I found in local library several magazines dealing with ST machines and there was a supertest of all known PCB CADs for ST, including SCOOTER.

I think that SCOOTER was the best contender overall if you take into account ST's speed and overall capabilities, but PLATON was something far above everything else, providing that:

a. You have infinitely fast ST

b. Do not care about spending 5760 DEM (Still remember the price !)on it.

c. Possibly have graphic output of say 1024 x 1024 or something like that.

Back in '93 there were no legal shop for Atari software here in Slovenia, so we all bought our stuff at local pirate and he sold me Platon 2.1 which later showed to be only some kind of demo (three DD disks).
This was only schematic and pcb (if you don't count library manager I think) and whole thing worked beatifully, but soooooooo verryyyyy slooooooooowwwww.

Several things that were so cool with PLATON:

1. You opened a project, and in it were schematics, pcb and several other things, including list of elements etc. Switch between them was very simple. So you could first draw schematics, then swap to pcb to place physical elements and autoroute them according to the netlist from schematic.

2. Whole thing worked under GEM. This enabled it to use more colors/resolution when available. I saw the same program on the friends TT 030 and it was very nice.

3. As said, it had decent schematic, so you didn't have to input netlist manually into pcb.

4. If I remember correctly, even that demo had much more powerfull autorouter than Scooter.

5. Platon had many "hooks" for external programs like simulator, pld module etc. Those modules off course were not present in demo.

6. Libraries were full of elements. I remember having real memory troubles with unpacking of libraries on machine without hard disk.

There were probably some more nice things about it, but I can not remember any more.

Simple screen panning could last over a minute sometimes. I think that it used FP calculations, since it was much faster on MEGA STe with FPU.
After several tries with PCB software finally price of the real thing cooled me down, and switched to PC for that purpose.(I intended to byu full version).
I've heard that Platon was meant for Next and similar powerfull machines and that Atari port was just some kind of test.
Some years after that version 2.2x came out for Atari, but then I didn't care much about that, so I don't know price for the full 2.2 version.
I checked into VHF Electronics site a few days ago about Platon and its still there, but unfortunately not for Atari :-(
They covered SUN and similar things instead.

I was hoping that I could get some Atari version really cheap these days...

Regards,

Branko

Howdy Mike,

IMHO, anyone with a Falcon should always do at least TWO things.

1) Upgrade to 14 megs. I used a board made in the UK bought from
Best Electronics for $85 which uses a 72 pin simm ($70). DO THIS.

2) Buy NVDI v4.11.

All you do is remove the old RAM board and plug it in. This should be
common knowledge for all Falcon owners. You must do this as there is no
reason not to increase the RAM.

1546. New at Systems For Tomorrow (August 5th)

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: sales@SystemsForTomorrow.com
Message-ID: <5saavp$9lu@uucp.tfs.net>
Source record: 118633

New at Systems For Tomorrow August, 5th 1997
~~~~~~~~~~~~~~~~~~~~~~~~~~~

Alien Thing: Expert Edition for ST/STe/Falcon $19.99
Alien Thing is an exciting top view shoot-em-up that pits you against an invading horde of aliens. You must stop their spread, kill their queen, save the earth, and possibly even live to tell about it. Includes the origional 11 levels, plus 11 additional Expert levels. For ST/STe/Falcon. From 999 Software.

Cardinal 28.8/33.6 External Modems $79.99
These refurbished modems from Cardinal started life as 28.8, but thanks to their upgradable Flash ROMs, they are now 33.6. Finaly, an inexpensive modem from a company you have heard of! Serial Cable not included. 90 day Warranty from Cardinal.

Scan X for TOS Computers $49.99
Microtek E3/E6 scanner driver is an easy to use GEM application that provides full access to most Microtek single pass scanners, mainly the 24bit Microtek E3 & and the 30bit E6 flatbed scanners. Features of ScanX for Microtek scanners: 24Bit (or 30bit) (16.7 M colors), 8Bit (GrayScale), 1Bit (Monochrome) HalfTone and LineArt, Variable resolution settings: 50 - Max. supported by scanner, Contrast setting, Brightness setting, Exposure setting, upto 8.5"x14" scanning area, PreScan Window with Clipbox, Scanning velocity setting, 12 built-in HalfTone pattern setting, Fast direct to disk scanning (little memory usage) for 1 & 8 Bit scanning, Save images as IMG and TGA, Positive or Negative scanning, BackTracking, 3D modern look, MultiTasking friendly scanning, and more. From Homa Systems House.

Mega Mines for ST/STe/Falcon $9.99
Mega Mines is an addictive version of the now classic, minesweeper game. Can you locate all the hidden mines, given only the number of mines next to cleared portions of the field? A good logic game to give the old brain a little work out. Features 3 difficulty levels, Digital Sound, Extra Life bonuses, and Extra Time bonuses. From 999 Software.

Tetris II Strikes Back for TOS Computers $12.99
Tetris II: Strikes Back includes all the fun and excitement of a traditional tetris style game, plus the enhanced Tetris II, where you have specific objectives to be carried out on each level. Both Tetris and Tetris II include a Two Player mode, and the optional addition of bombs to help you out of tricky situations.
Tetris II Strikes Back is available now in either an ST/STe
~~~~~~~~~~~~~~~~~~~~~~~~~~~

version (Item#21165) or a TT/Falcon version (Item #21360) for only
$12.99. From Empty Head Software.

HD Driver Upgrade for TOS Computers $24.99
We can upgrade your HD Driver v3, 4, or 5 to v6. Requires the
return of your origional HD Driver disk and manual. We also have
the full HD Driver 6 package for $49.99.

Magic 5 Upgrade for TOS Computers $29.99
This package will upgrade Magic 4 to Magic 5. Requires the return
of your origional Magic 4 manual. We also have the full Magic 5
package for $99.99.

NVDI 4 Upgrade for TOS Computers $29.99
This package will upgrade NVDI 3 to NVDI 4. Requires the return
of your origional NVDI 3 manual. We also have the full NVDI 4
package for $89.99.

Also Available:
CAB 2.0 $34.99 No, CAB 2.5 is not here yet :)
Power Up $19.99 Racing fun for ST/STe/TT/Falcon
Desktop Solitaire $19.99 8 solitaire card games for TT/Falcon
Face Value $69.99 Visual style GFA programming
All Things Falcon CD $9.99 Tons of Falcon PD/Shareware on CD
Hard Disk Sentry $39.99 Optimize that Hard Drive
Photo Show Falcon $9.99 View Photo CD discs on the Falcon
Card File 4 $29.99 Personal Information Manager
Moving Pixels CD $29.99 Software Collection /w sources on CD
ESG Clipart CD $19.99 IMG, CVG and GEM/s clipart on CD
MIDI Maze $4.99 The classic happy face shooter!
True Paint $19.99 GEM based paint package
Plus about 400 additional products for your TOS Computer!

Coming Soon: Electronic Cow Products!

I am looking for an excellent Tetris clone called PileUp. If anyone knows where I can get this game, please e-mail me at aced@swbell.net. Thanks.

Bryan Anderson
aced@swbell.net

1548. JAG + CD + 13 games + 4 controllers

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: bili7450@mach1.wlu.ca
Message-ID: <EEHwxr.Hr8@info.uucp>
Source record: 118635

For Sale:

Atari Jaguar Console & CD
SVHS input
RF demodulator
Team Tap 4 player adaptor
2 regular joypads
2 enhanced joypads

GAMES:

Aliens vs Preditor
Defender 2000
Tempest 2000
Doom
Power Drive Ralley
NBA JAM
White Men Can't Jump
Rayman

CD's:

Highlander
Battlemorph
Primal Rage
VidGrid
FireFox
Myst demo disk

Will sell as a package only, all manuals and overlays included except for AvP which is missing it's overlays will be included. The VidGrid disk has some scratches on it and usually will only load part of the way. (Note: I have not tried to remove the scratches on this disk so it may be quite possible to salvage this disk)

I'm looking for about 150 US for this entire package including shipping. I will also accept other offers it this seems way out of line.

Actually, the parallel port on the ST is not fully implemented. That's why the
PARCP solutions needs a special cable.

>It would be a terriffic tool to transfer the ST legacy to a PC
>ST-emulator like pacifist !
>

If it's a one-use transfer, get a serial cable and serial transfer software.
Any terminal emulator will do (PC and ST side), or try Ghostlink. It will be
slower than parallel communication, but it works.

1550. New cheap 040 Atari clone

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: Magnus Kollberg <emwoll@emw.ericsson.se>
Message-ID: <33E8811D.446B9B3D@emw.ericsson.se>
Source record: 118637
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

Hi,

I just wonder if anyone has seen that there is going
to be released a new _cheap_ 040 Atari clone this fall.
I found info on it on ST-Computer's web-pages. It looks
very interresting and as I said it's realy cheap compared
to what is available (Medusa040/Hades040).

It features:

68040 @ 33MHz
4 PCI slots
3 ISA slots
4 SIM slots giving a total of 512MB RAM (EDO)
2 IDE slots
Floppy
Realtimeclock
512kb Flash-ROM for easy TOS upgrade
Parallel port
Serial ports

All this with a nice looking case 8MB of RAM, 540MB HD
Graphics card, keyboard and software will only cost 1499 DM!!

ALOT cheaper then the Hades040.

Sounds realy nice.

There will also (where have I heard that before?) be a
Falcon compatible card with a DSP, S-P-DIF interface
and DMA matrix to make it somewhat Falcon compatible.

Take a look at:

http://www.gic.de/st_inside/milan.htm

1551. Re: Anyone had success installing Mint?

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: Gerhard_Hoelscher@OS2.maus.de
Message-ID: <199708061530.a13483@os2.maus.de>
Source record: 118638

Hi!

In Msg A28803@AC3, hallvart@sn.no wrote:
HT>I'm running MagiC 4/NVDI 4 on my TOS 2.06 STe and when booting up,
HT>after the MiNT system has been booted

MagiC and MiNT can't run simultaneously.

HT>After that things seem to be okay, but they're not. First of all
HT>my "Thing" desktop's parameter's aren't loaded since all the icons are
HT>in different places and none of my configurations are included.

Switch back tu your old config.
Then load Both, MAGX.INF and MINT.CNF into your favorite editor.
Now look at the environment variables ($HOME, $THINGDIR, $PATH, etc.).
You should define most of them in the MINT.CNF similar to their
definitions in MAGX.INF.
This means, a

#_ENV NAME=Value

in the MAGX.INF should get a corresponding

env NAME Value

in the MINT.CNF.

This should help much.

HT>Then I tried to exit "Thing" to get into the usual TOS 2.06 desktop,
HT>but that resulted in all filenames being shown in lower case and I
HT>couldn't run any programs

This can possibly be configured by the environment variable UNIXMODE,
but I don't know exactly.

All I wrote was from scratch, sinc I don't have MinT installed at the
moment.

bye,
Gerhard

Oh you are so lost.. Many 3D party companies have taken over
where Atari has left us. ASH in Germany for example have made
the excellent MagiC OS. Seems like there is a new upgrade out
every day. This operating system is a complete rewrite done
entirely in ASM for SPEED.. This is a preemtive multitasking system
that uses VERY little RAM, and multitasks your gem (AES) prorgams
FASTER then TOS could run them. It features the speed enhancements
of NVDI built right in. There is also MiNT (text mode) or N.Aes
setup which requires a little more resources but also has a
lot of development on it.. You mustn't give up on Atari, but
rather redirect who you get stuff from. Big deal. All
I can say is that MagiC has more updates then Win95 will EVER
have. Have fun!

:
: Hmmm, on my humble 12 MHz 68000 I cannot type away that easily in the forms.
: So probably you use True Color screen resolutions, maybe without NVDI ?

Hmm. No. I mean, I'm in 256 color mode, but I do have NVDI installed.
Admittedly, things are a bit faster in 16 colors, and even better in 2
colors, but that isn't the point. It appears CAB isn't being very
judicious about what it updates while you are typing into a form, causing
a tremendous lag with each keystroke. This is particularly noticeable
with forms with large windows to type into. I think CAB is trying to
redraw at least the entire form field with each key press, and may be
trying to redraw even more than that!

Hi George,
There is a product called Spectre which is a cartridged based system
for mac emulation on an Atari - it can only run System versions prior
to 7 though. It's been out of production for a while but you may be
able to find stocks or pick up one second hand.

An excellent graphics program (for ST low) is Crack Art and for mono
is Munch. I hope this helps.

Regards
David Beards

Nicholas Bales, Toulouse, France skribis:

>Anyway, why would someone want to use netscape on an atari when you can use
>an atari web browser, such as Wensuite or CAB.

Wensuite is a joke, and CAB has many shortcomings.

Has anyone tried to access a site where the URL is a long cgi-script
line including a question mark before the arguments? It works, but
try to reload the page, or move on to further links and try to back
up to the original cgi-page. Big surprise! CAB has trunkated the URL -
everything from the question mark on is gone. The page is eitheir not
there at all, or is changed into something stupid.

And CAB is unable to display the entire Latin 1 caracter set (the
norm for HTML). CAB always supposes that you have only those
caracters that are in the Atari standard. Everything else is shown as
a question mark. Installing fonts that have the complete Latin 1 set
does not help.

That's why I use Lynx to browse the net most of the time.

I think what you mean, is that there are no PC-Emulators that will run
NetScape on your Atari, right? I'm saying this because there are, in fact,
PC-Emulators for Atari computers... There is the (now old) PC-Ditto and
PC-AT for ST's, the Vortex 386-SX board for Mega STe's, and a 286 board
that plugs into the Falcon's PDS...(FalconSpeed). There are also a couple
of software emulators for the Falcon, but I don't think they are really
very useable...PC-Soft comes to mind... :)

>Anyway, why would someone want to use netscape on an atari when you can use
>an atari web browser, such as Wensuite or CAB.

Absolutely! I agree with this 110 percent...! :)

Paul, I E-mailed them just the other day, like you becoming concerned since
I hadn't gotten an issue in quite awhile. Their answer was that they were
having problem getting enough advertisers to pay for the cost of the new
issue. I asked them if subscriptions weren't enough, and they said no, that
subscr. only make up a very small part of their revenue. They also said that
the would probably release the next issue, paying for it out of their own
pocket money. I'm hoping still, but that was last month, so...

See ya 'round CyberSpace...! :^)

1563. JAZ Cart problems

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: jagger@connexus.apana.org.au
Message-ID: <5s9vr8$mk5$1@preeda.internex.net.au>
Source record: 118779

Subject: JAZ Cart problems
Newsgroups: comp.sys.atari.st
Summary:
Keywords:

Any one else having problems with JAZ cartridges, I just got 5 in row
that couldn't be formatted using ICDPRO6.55. They seem to format for 1
hour, then appears the message " error occurred while trying to format
drive, sense code $24 (Illegal field in cdb) if anyone knows what that
means? If you get as far as trying to format, it imediately
comes up with 300 bad sectors and looks like taking 16 hours to find the
rest. Exactly the same thing occured with one of these disks on a friends
Falcon.
Iomega recalled 75,000 faulty carts, according to their webpage they
were made between 03 13 97 and 04 20 97 and had serial no.s ending with
ms. The 4 of the ones I tried were dated 07 18 97 and one 05 10 97.
I finally found one, 06 21 97, that formatteed ok. The store says they
all formatted ok on a pc. I have 3 other disks that are ok
I use them professionally for hard drive recording ans I don't have time
to search for the one out of 6 disks that works.
Seems to be alot of black PR on the net about Iomega.
If anyone has any ideas please bring them forth.

1564. Atari 2600 16k computer add on.

Newsgroup: comp.sys.atari.st
Date: 1997-08-06 00:00:00 UTC
From: Patrick Tillman <loki@nmt.edu>
Message-ID: <33E8B0AE.5A22@nmt.edu>
Source record: 118780

I am posting this question here because I have not been able to find a better place. I have seen pictures (in the short lived Atari Age magizne) of a add on keyboard looking thing for the Atari 2600 that was supposed to make it a 16k computer. This thing plugged into the cartrige slot. Has anyone else heard of or seen one of these? I don't know if they were ever produced. The add I saw was a soon to be available type. I'm just curious about it. Never saw anything but that one add. Thanks much.

I think you need to connect the serial cable to the modem (serial) port of the ST, not the printer (which is a parallel port), then to the serial port of the PC.

Not sure about the rest...

Nick

That's the point for any user..
Same as STiK.
But ASH have done of what i have wait a very long time.
Sure, i don't have any ftp oder mail client.
I think that only a time question..

1568. FS UK Geneva/Neodesk

Newsgroup: comp.sys.atari.st
Date: 1997-08-07 00:00:00 UTC
From: rgoring@REMOVEzetnet.co.uk
Message-ID: <5scddgdkm1@irk.zetnet.co.uk>
Source record: 118642

Hi All,

I have Geneva 006 and Neodesk 4.005 (the latest versions) for sale.

Complete with manuals.

Geneva/Neodesk is a multitasking sytem and desktop which will work on any Atari ST, STE, TT, Falcon with 1Mb of RAM.

If you have the RAM you can run several programs at the same time and switch easily between them.

eg. CAB & Everest - when writing HTML pages, means you don't have to unload Everest and load CAB to view the results. Just switch to CAB and hit the 'reload' button.

Geneva rewrites most of the operating system as it loads and allows ALL Ataris to run faster than they would without it.

Neodesk is the desktop which was written to run with Geneva, and they match up perfectly. Interacting with each other as though they were the same program.

Other features -

Have as many ACCs running as you like (no 6 limit).
Load/unload ACCs at any time.
Load/unload programs at any time.
Bomb catching - if a program bombs, geneva will catch it, unload the program and put you back at the desktop - no need to reboot.
Switch resolutions without having to reboot.
Geneva contains a built in file selector which allows ALL disk options from it (copy, move, delete, new folder, etc).
Macros for doing anything from the desktop - eg hitting one key can open up D:\FIRST\SECOND\THIRD\ and display the contents on screen.
Built in icon editor for desktop icons.
Recoverable trashcan.
Clock display.
Printer queue and spooler.
Plus loads more.

Price £40 + £5 p&p

I live near Portsmouth if you want to collect.

Yours Roy

>---

Look at it this way, Charles:

For an active device, like a modem, there are 2 relevant data rates.
The rate from the computer to the modem (DTE) and the rate from the
modem to the communications net (DCE). The DTE is determined by YOU -
the DCE is determined by the capability of the network and the modem
at the other end.

If there is no compression taking place in the system (compression
turned OFF or data already compressed so that further compression by
the modem is not ppossible) then DTE should be adjusted to be no less
than the DCE you can achieve.

If (de)compression DOES take place in in the modem (and this,
typically, is x2 or x3) then DTE must pass data that multiple faster
than the DCE otherwise it will detract from the possible DCE rate.

If your modem receives data from the network at 56k and this data is
compressed you will need AT LEAST 115k DTE to keep up with the
incoming data. A similar argument applies to compressible data going
from your computer to the modem.

>me set up port speed parity settings, etc.

I have set up Ghostlink on the ST modem port to PC serial port.

It works well, but it's a one way system, ie. the PC user cannot 'see' the
STE's files. If this is acceptable,it is the easiest solution.

If not, see my reply to your other post.

The truth is that some manufacturers did not implement the format command
as they should have. Therefore, trying to format the drive can possibly
result in damage. That's why SCSI-Tool refuses to format some sorts of IDE
drives.

: Does anyone know a database format that exists on both the ST and pc,
: such as Dbase III, Paradox, Oracle ;-)

Superbase exists on both platforms. Also, most every modern database
should support standard DBase format as well as comma or tab delimited
ASCII format (or both). I have ported data back and forth from HyperLINK
on the ST and Atari Works, and MS Works, and Access on the PC using the
delimeted ASCII formats.

Personally I have emailed Jon on other more legal matters... he
doesnt answer.. so not actualy a brilliant suggestion,

>But he does at least put it under the emulation heading.

Really?... so the POMPEY PIRATES banner has been removed from the
main page has it?....

>out and still do, so it's a shame to see it boycotted because it
>covers another area of "Atari" in its global sense - piracy has always

listen you have got the wrong end of the stick from my posting....

I personally couldnt give a toss who has or has or hasnt got illegal
software.......its not really any of my buisness... i dont care! I
know emulation users will be downloading pompey pirate stuff as i
type.. I dont care... people can talk about it.. do it.. do whatever
they want.. its really none of my buisnesss and i really do not care,

But what I object to is Fugizone adverting it under the guise of a
well respected ATARI web page,.. if a web page advertises itself as a
pirate web page.. with pirate software.. then all well and good..we
know where we stand.. and we decide wether to visit it or not..

But fugizone advertise thereselves as a respectable true ATARI page
for ATARI enthusiasts..(and it was)... but now you go there and are
told piracy is great...

That was the point of my posting.. to ask why the turn of direction..
if all the well respected web pages suddenly proclaim piracy is great
then we are definatly sunk..

Cheers !ynoT (ATARI Programmer)

>or the window input/output will be wrong.

This "problem" can only concern the three Swedish charcters aring, auml
and ouml, for me, right? So if I arrange my keyboard so that I can access
all of these characters according to the Atari standard _and_ according
to Latin 1 _at the same time with just one keyboard mapping_, then there
will be no problem, right?

All that is needed is an option, a box to check, that says "my fonts and
keyboard are according to Latin 1, so no translation of the incoming and
outgoing characters are needed". Those who want to take the "risk" of
checking this box can do so.

I'm not a programmer, so maybe there is something I'm overlooking.

And now for another of my problems with CAB:

When I go to e.g. Alta Vista to search for something, I type in a search
word and get a list of hits. I then go to one of the links in the list. If
I then press the "back" button in CAB I should get back to the list of
hits (that's what happens in every other browser), but in CAB I get back
to an empty Alta Vista search page and have to type in the search again.
This seems to be a problem with long cgi-adresses. CAB seems to "forget"
the long adress, when the back button is hit (or when the window is
resized). This is a major bug. Am I the only one who has had this
problem?

No, I posted to this newsgroup about the same thing a week or so ago. I
suspect the problem has to do with the handoff between CAB and the CAB
OVL, and has something to do with posted form data. It happens with any
page that results from posted form data. You can not use CAB's forward
and backward buttons to visit such pages. I haven't heard if anyone is
working to solve the problem but can only assume that someone, probably
Dan Ackerman, is. Since Alexander Clauss has responded to your queries in
this thread before, perhaps he will elucidate both of us.

>

Thank you for your answer (your solution will probably be the one I'll have to use), but what I really want is in fact one set of data that can be accessed with an Atari and a PC program, e.g. I have one zip disk in pc format (that I can read on Atari with Magic and HDDriver 6) on which I have the data, the Atari program and the pc program, and just by clicking on the right program (depending on the computer I'm using), I can access all data without needing to import or export everything first. This means I can just change data with my Falcon, take the zip disk to someone else with a pc, start the pc program, look/modify/delete/add some data and take it back to my Falcon.
I know I can use an Atari emulator on a pc, but is there another way ?

I use GTLook at work on a Quadar 840 under MagiC Mac. The scanner is an
Epson ES1200C. GTLook is very high performance, with low memory requirements
because it scans to disk through the SCSI bus. I don't think that it can be
used inside another application, at least none that I have, but it multitask
fine. Needless to say that it far outperforms its Mac conunter parts when
it comes to speed in working with the data, but is also not filled with
many image processing options, just the basics to control the scanner.
I purchased it when it was the only available driver, and it still is the
most expensive. Given the high cost of Epson scanners compaired to new
scanners currently available, I would be more inclined to go with one of the
Microtek drivers that are available. GTLook is about $150.00 and the Microtek
driver is about $50.00. I haven't looked into the HP drivers/scanners.

I would be interested in how to budget for a scanner around Christmas time.
Is that the kind of gift that is just labeled from "Santa" and noone (especially
wife or girlfriend) knows who it is from?:).

1591. 1040ST Wanted to Buy in Tucson, AZ

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: Thom Gandet <tgandet@azstarnet.com>
Message-ID: <33EAC66A.5BC680F3@azstarnet.com>
Source record: 118665
Cross-posted to: comp.sys.atari.st,comp.sys.atari.st.tech

I'm in the market for a working 1040ST, with hi-res grayscale monitor. I have several Atari floppy disks that I would like to transfer to my Pentium PC system; unfortunately, the disks were formatted on the 1040.

I need to get these disks into PC format ASAP, but I'd also like to do some experimenting with a 1040 (or Mega) and want to buy an ST or Mega.

If you have a 1040 to sell, or you'd be willing to let me have the use of it for fifteen minutes, and you live in the Tucson area, I'd like to hear from you. Thanks!

Regards,
Thom Gandet

1592. ATARI: Bravo Sierra Computers! Hardware, Software, Accessories!

Newsgroup: comp.sys.atari.st

If you wan't me to read any response from you, do not respond here,
Direct all responses in E-Mail to: bensmith@teleport.com

The Bravo Sierra Web Page has been fixed. If you find trouble with my
Web Page, please E-Mail me at bensmith@teleport.com.

I've added more Items to my Catalogs, such as several large boxes full
of Atari ST Software. All of them Complete in Boxes with Documentation.
Some are still UNOPENED and SHRINKWRAPPED. As well as an Atari SLM 124
Mono Monitor with a Built in Monitor stand and an Atari Laser Printer.
For the Classic Atari 8 Bit Line Added Hardware was a U.S. Doubler Disk
Drive plus a modified 800xl with a built in Translator on a switch that
will run older Software without a Translator Disk Plus Lots more new
8 Bit Disk SoftWare for $5 each.

I have some MFM & RLL Hard Drives I got Directly from the Shadow of
Shadow Software. Older Technology made with a lesser chance of Planned
Obsolescence. Built like Tanks. The Shadow tells me each one worked
before they were taken off their Computers. Each one, $25, as is. Model
numbers follow...

Kalok KL320 MiniScribe 8425 SeaGate ST-238R SeaGate ST-225
Lapine Titan LT 300 RLL MiniScribe 3425 Conner CP-321
Seagate ST-157A

See my Web Site at www.teleport.com/~bensmith/bscomputers.shtml for
Bravo Sierra Computers. Where you'll find Both Classic Atari 8 Bit & ST
HardWare, SoftWare, Books and Accessories. In BSC's Catalogs, you may
find something you've been looking for. Something you might want. Even
Something you may of Forgot! At BSC's Web Site you can View, Capture &
even DownLoad Atari Catalogs or E-Mail BSC at the Web Site! Or Request
Catalogs by E-Mail. Do You Have problems Reaching BSC's web Site? Why
not DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or
Feel free to Request catalogs through E-Mail. Really, it's no inconven-
ience. All I ask is that you specify Atari 8 Bit, Atari ST or both.
Then I'll send them to you by E-Mail Only. Not Snail (Postal) Mail. I
will get back to you after the weekend. Please let me know if I can't
attach files to your E-Mail. Please Direct any and all Replies Through
E-Mail to bensmith@teleport.com. Or call Weekdays, Anytime, in
Portland, Oregon. U.S.A. at (503)256-9974.

Now available on Bravo Sierra's FTP Site also available through the BSC
Web Site is the ShareWare version of Carina BBS (CAR_BBS.ARC) By Shadow
Software. The Best, Most Powerful BBS SoftWare on any 8 Bit Computer
Platform. Also from The Shadow of Shadow Software (my Boss) a File

called TESTERS.ARC. ShareWare from Shadow SoftWare that on your 8 Bit Atari, lets you tests JoySticks & Paddles plus all your JoyStick Ports. You can test all 4 JoyStick Ports on a 400/800 & all the Joystick Ports on any 8 Bit Atari Computer. Both for the Atari 8 Bit. Register with Shadow Software to keep the support coming. And for those of you who wan't to run your Atari ST SoftWare on your PC, their's TOS2WIN.ZIP. This ShareWare Emulator from Germany has advantages over the GEMulator! This Emulator is SoftWare, so the faster the PC, the Faster you can run your ST SoftWare. Also, you don't need to process your Atari files in a special manner. Like in an Image format. Nor do you need to set aside a special area of your Hard Drive for your ST Files. Plus you should be able to use all your peripherals. Register and Support ShareWare!

I've added to my Web Site a page for Oddities. Rare Atari Vaporware that never made it to market such a 1090XL expansion Box. The Shadow of Shadow Software tells me it is the Best one of the Few Atari made. And one of the Last of these Prototypes made. Which means it's the closest to being perfected. Also 3" Amdek Disk Drives. Don't be mistaken, I don't mean 3.5 ". I mean the 3" standard that they stopped making soon after they started. Their are two 3" drive Mechanisms in each case. Something few have seen but read about them on my Web Page. Go directly on the web at: www.teleport.com/~bensmith/oddities.htm

Also, on BSC's Web Site! Links to Atari Support at other Locations... At one link you'll find a Link to a Web Site with Michael Currents List of Developers and Others who Support Atari. And Bravo Sierra Computers is on the list. Also, you can find A list of Atari Support on BSC's Web Site. The Atari Developers, Sellers & ReSellers of Atari that I go to for Help.

--

Atari ST and Classic 8 Bit, Hardware, Software, & Accessories. (503)256-9974. DownLoad FREE Catalogs at ftp.teleport.com/vendors/bensmith/ or by WebPage at www.teleport.com/~bensmith/bscomputers.shtml Catalogs Requested by & Received Through E-Mail at bensmith@teleport.com Please Specify Classic 8 Bit or ST!!

I know for a fact he checks his mail daily and he's certainly not one
I'd accuse of never replying to mail, if anything he seems to
positively thrive on it.

> Really?... so the POMPEY PIRATES banner has been removed from the
>main page has it?....

yes

[lotsa snipping]
> But fugizone advertise thereselves as a respectable true ATARI page
>for ATARI enthusiasts..(and it was)... but now you go there and are
>told piracy is great...

and it still is, Jon was simply excited at all the recent activity
regarding the PaCifiST scene and intrinsic to that was the rise in old
menu disks, Pompey CD's being amoungst them. But this is all a moot
point now, if you bother to take a look you'll see he's carefully
re-written that part of the site, removed the piracy elements and
(more importantly) the TOS Rom images.

> That was the point of my posting.. to ask why the turn of direction..

Because it's like a revival, because Jon's only 17 and because in our
youth when the ST was hot we *admired* the stuff groups like Pompey
could do, admired their gfx, music, menus and cracking ability -
admired all those demos and games. So it just brings a flood of
nostalgia back to see what you thought to have been dead for many a
year, live again - albeit under an Intel box. That's why.

Yes but uploading the TOS image files is illegal anyway... what is needed is
the loader program only. Unless they are special modified TOS images designed
to work with the loader ?

There's no such thing as an Atari hi-res greyscale monitor. Hi ST-Hires is
640x400 in monochrome (B&W).

> I need to get these disks into PC format ASAP, but I'd also like to

Disk format is partly compatible, so you shouldn't have many problems
converting them if they are in double-sided format (720K). If they are
single-sided disks (360K), maybe an old PC can read them.

If you can't find a 1040 for sale, you might want to try Pacifist, which is an
ST emulator for the PC. A quick web search should find it.

Glad to hear that I'm not alone in this. :-)

Actually in some cases it does work. I have a cgi-heavy site of my own.
The user can choose (in a form) if the pages should use frames or not. If
he does choose the frames version, the back button bug (nice name!) kicks
in, but without frames it seems to work OK.

>I haven't heard if anyone is

1600. Above 4Meg RAM on an Atari 1040ST

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: Menno Koolwijk <shiftleaders@klm.nl>
Message-ID: <33EB7A04.32C@klm.nl>
Source record: 118674

Can someone give a hint how I connect more than 4Meg dynamic ram-modules
onto 1040ST. How do I bring in Address-lines A22 and A23, when (time)do
I multiplex them and at which signal. Address-decoding till $DFFFFF.
Regards,Meko

The standard way of doing this is to use LIMITMEM.TTP which comes
with the MagiC package. This stuffs something into the programs header
which causes MagiC to limit the allocated memory when loaded. I use it
with 1st. Word which (being written prior to multitasking) has the
attitude that "If I'm loaded I'll keep all the memory".

1603. Cab and its internet cache...

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: pascal.ricard@remove.this.before.hol.fr
Message-ID: <78pascal.ricard@hol.fr>
Source record: 118677

Hi to all the Cab-surfers...

I still have some troubles with the internet cache and would like to know if I'm alone...

I run Cab 2.0 (not demo) on MTos (MiNT 1.14, AES 4.1) and MintNet (pppkit, gemdos partition) with the very fine ovl 1.81 (thanx Howard ;-)), on a Falcon with 14 MB RAM.

I spend a lot of time ("the" Net is not very fast as you know, nor the Falcon is) to load URLs that I would like to keep on my HD, but the Internet cache is evenly erased far before the limits I have set. I do not understand what's happening :-(((

I've set 20 MB for the max size and 2 MB for "frei halten" and there is 60 MB free on the HD.

The image cache is not too big (max 6 MB, frei 2 MB) so there should be enough free RAM for Cab to work.

I never have had much more than 2 MB before the cache is erased. It usually happens just after downloading a zip file (coincidence ?).

My HD driver is Hushi v6.06 from SCSI-Tool but I hope this is not the problem (BTW, I still cannot join Hard & Soft or PC-Specialist to get an update. I have sent many Faxes to them. Do they have an email ?).

HELP!!!

Bye All,
/Pascal/

This is not a CAB bug, but the overlay. Depending on what version OVL file
you use, it will perform different.

Without the OVL file, CAB is only a HTML browser, not a WWW browser.

** ST Software For Sale **
** All disks and doc are original. No copies or pirated software! **

Games

Wonderland (Alice in Wonderland adventure game) - w/Box, Manual, and
Maps. Works in monochrome too. Impressive game, perfect condition. $9

Life & Death - classic surgery simulator. w/Manual, box, & rubber gloves(!) $9

Leader Board - excellent golf simulator. w/Manual and piracy key. $7

Shufflepuck Cafe by Broderbund. Play airhockey against aliens. Great
graphics and sound effects. - w/Box and Manual. $7

Flipit and Magnose: Water Carriers from Mars - Unique platform game, has
two-player mode. Disk only (no manual) $3

Hostage Rescue Mission - w/Manual. $7

Fascination -- Adult adventure game. w/manual. 18+ please. $9

Fair Dinkum Puzzle Pack -- Word Search Creator and Crossword Creator II.
w/Manuals for both. $9

FLOOD by Bullfrog/EA. w/Box and Manual. Great Game! $6

Typhoon Thompson by Broderbund. w/Manual. $6

Stir Crazy featuring BoBo from Infogrames. w/Manual. $6

Top Gun. w/Manual. $3

Silicon Dreams and Jewel of Darkness -- adventure games. w/Manuals. $3

Graphics

MultiViewer Graphica (MVG) by Dr. Bob. w/Box, manuals. $8

Productivity

Metapyschology Primer #1 by clear thinking software. Manual. $3

GramSlam 3 by Wintertree Software - grammar and style checker. w/Manual. $9

SoundLab from dmj software. Registered version with manual and bonus disk
of sound samples. $5

Flash II by Missionware Software. Workhorse modem program. w/Manual. $6

STraight Fax 2.1. Premiere fax program for the ST. w/Manual. $9

The Cryptographer by Fair Dinkum. w/manual & reg card. $6

Utilities

CodeKeys by CodeHead. Macro program and more. w/Manual. $5

HotWire by CodeHead. w/Manual. $5

CodeHead Utilities. w/Manual. $5

Diamond Back II by Oregon Research. w/Manual. $7

Programming

Power C by MIX Softare. (This is for MS-DOS, not ST). w/Manual. $3

Free Stuff!

Every order gets something free! My choice, but available items include:
STart disks, TOS disk, various other goodies.

TERMS OF SALE

Buyer pays postage and COD charges (if you want for COD shipping) from
California.
Credit cards/e-money accepted via web page payment system, enquire for details.

I'll consider Macintosh hardware/software in trade. (No pirated programs!)

>
>yes

hehehe and replaced by a banner linking straight to your little green
desktop that is the biggest pirate web site on the web.. hey smart
move..."out of the frying pan...and into the fire" ??? :)

and just to prove you are missing the whole point.. i went to the
little green desktop and downloaded cannon fodder last night because
i have been wanting to play it under pacifist for ages,(been looking
for it for ages...even asked on the atari_emulation mailing list) i
have the original... had it years.. but couldnt get the disks to
pacifist.. so its done me a good service..the pirated copy has helped
me.. I think the st images of games have there place..because i cant
copy my originals or get them working on pacifist.. so these help,
fanx for that BTW.....

>> That was the point of my posting.. to ask why the turn of direction..

>admired all those demos and games. So it just brings a flood of
>nostalgia back to see what you thought to have been dead for many a
>year, live again - albeit under an Intel box. That's why.

Then let the pirate web site promote piracy...NOT ATARI resource
sites ?.....you still dont get it do you ?....

Can you imagine st apps, atari computing, st+, stosser, hallvards,
kockens, system solutions or any other decent web site suddenly
telling everyone how great it is that pompey pirates are back and how
they helped the atari.....I am NOT saying the sites are wrong or the
software is wrong,, they do have there place .. but in the PC
community for emulators.. NOT in the ATARI community,

<smile>

ICD's software works with both IDE and SCSI devices so it has to have the
format option for SCSI devices. However, try to format any IDE device. It
won't let you-it tells you that option is unsupported... :)

It is better than that.

It allows up to 16Mb of FAST ram. At least that is according to the pages of "Woller & Link gbr" in Germany. Prices are from 209DM (�70) for unfilled, to 339DM (�115) with 16MB.

There site is at;

http://www.inx.de/w+l/atari.htm

However I will be buying the new 68020 accelerator from TUS if and when it comes out first.

Very Strange because I HAVE been using it under MagiC and NVDI!!!

The mouse pointer only changes after a res change OR if you load the
mouse-ka-mania accessory after your desktop has come up.

Hallo Bertilo,

Oh really? I assume your using CAB v2.0a. With the new CAB.OVL v1.2618
and CAB v1.5 what sites are causing you to crash? There are a few out
there such as http://www.sidewalk.com/ (A commercial MS site) that will
not allow CAB to connect, but crash? Post a few and let's see what's
happening. I can surf hundreds of sites now without crashing. Maybe there
is some other reason your having problems :)

Regards,

Charles

1620. Atari repair in seattle

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: morphic@speakeasy.org
Message-ID: <5sg28m$o57$1@betty.speakeasy.org>
Source record: 118694

Hello,

I was wondering if anyone would know of a person or place in the Seattle area who could do repairs on Atari computers as my 1040 STE is down (internal power supply problems I'm pretty sure).

Thanks ,

-ARIK-

1621. Re: ST+ 19

> getting corrupted on download. Issue 18 I`ve downloaded 3 times

I am told geocities is natoriously unstable :(.. unfortunatly ST+
arnt actualy on the internet, they took up a general offer I put out
to give diskmags web space.. and thats the only place I could get free
web pages from.. a bit hit and miss it seems :(

> from 42BBS only to have it fail to load.Colin seems to think that
> it might be something to do with the + sign not being recognised

Yes something else I believe he only found out late.. the filenames
are inputted by whoever puts the diskmag together (the shell allows
full configuration you see) and he thought it looked good to use ST+
as an extender... silly billy its a damm pain and i believe dropped
from issue 19,

> by some machines.

unzipping and running on pacifist frm hd is a no no because of this
:(... now its not though :)

> above,which ends 7454/ and the one shown in Dave`s sig which ends
> 745/.

he has a full stop ?... tsk tsk tsk.. the correct url is without the
full stop.. i will point that out to him :)

> I cannot seem to reach your STOSSER page direct although I can by
> going through a Link.

This is another learn later thing.. I originaly set up the page using
my ATARI... spread it around.. posted absoloutly loads of web pages
asking them to include the url.. and that was that...
the problem is that now the pc and maybe even the falcon?.. are case
sensative.. where my atari and the original ftp software and cab 1.
was not.. so my actual web page is

http://www.airtime.co.uk/users/stosser/HOME.HTM

Some pages that got this url by using there GRAB function in there browser have the correct url and I presume thats how you get there.. if you would like to update your bookmark to the above (same for anyone having probs) then it should be ok...

ST+19 was uploaded to the actual web page AND is always uploaded to ftp.cnam.fr I think ?... I dont actualy upload.:) so it will show up on a ftp site soon.. Peter Omegahunter@msn.com has been handed the riegns of the st+ webpage now and he does the uploading.. maybe he can sort you out with a copy :)

Cheers !ynoT (ATARI Programmer)

1622. Re: Falcon: Fastest Reliable Modem Spee

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: jmpatat@asi.fr
Message-ID: <33eb867c.1943667@news.asi.fr>
Source record: 118696

On 25 Jul 1997 08:48:37 GMT, mgrove9@owens.ridgecrest.ca.us (Michael Grove) wrote:

>>> I'm wondering what the fastest reliable setting for modem2 on
>>> a Falcon is. My modem supports two port speeds...57,600, and 119,000 (or
>>> something close to that). The higher setting gets a lot of garbage
>>> characters when logging into my isp with ConNect. Is that normal?

57600 seems to be the more reliable speed because the 85C30(SCC) has no internal buffer. The author of Hsmodem make an upgrade (Am85C230A or Z85230) giving 4 byte of internal buffer. Following is an extract of hsmodem4 documentation (scc.txt)

---------- Begin extract----------
I call only the Z85230 and the Am85C230A an "ESCC". These ICs have an 8 byte receiver FIFO and a transmitter FIFO not smaller than 4 byte. An ESCC contains all functions of the SCC.

SCC and ESCC

Remenber: I call only the Z85230 and the Am85C230A an "ESCC". ST_ESCC contains ever an ESCC. In the MegaSTE/TT/Falcon there is a SCC in the original state. To decrease the CPU load and to improve the data safety it is possible to insert an ESCC with PLCC-package. SCC and ESCC are pin-compatible enough.
----------End Extract----------

One year ago i downloaded several files on BBS using zmodem and a vfast 24k modem. I got 2.8Ko/s on binary files every times and a great 5.8Ko/s on text files.

Regard, Thierry

From: Dennis Cooper <dennis_cooper@administaff.com>
Message-ID: <33EB9D41.11BB@administaff.com>
Source record: 118698

I recently picked up a 520ST. It came with monitor and disk drive and all necessary cables. Unfortunately it did not come with manuals or software. It refuses to boot, so either it's kaput or it is the model that requires TOS in the disk drive to boot. Does someone have a spare TOS diskette they could send. I'd pay for postage. Or if you have any other ideas...I'm all ears. :)

1625. Mega 4 STE + stereo monitor

Newsgroup: comp.sys.atari.st
Date: 1997-08-08 00:00:00 UTC
From: rsadler649@aol.com
Message-ID: <19970808014501.VAA25235@ladder01.news.aol.com>
Source record: 118699

For Sale-

Atari Mega 4 STE w/4 megs RAM, 1.44 MB floppy, 65 MB hard drive,
TOS 2.06, Naksha mouse, Mouse Master, manual, and system disk.
Commodore 1084S color stereo monitor.
Approx. 40 original software titles in boxes, some new. Titles on
request.
Approx. 1000 misc. 3.5" ST disks with shareware, games, utilities,
applications and just general STuff.
Four or five Atari joysticks.
2 six foot floppy drive cables- no drives
Anything else Atari related that may be laying around here.
Books, ect.

Everything works good I just don't use it any more.

I would prefer to sell this system to somebody in the Northeast
Indiana area that is either close enough to deliver to or meet at a
halfway point but I will ship if you are willing to pay shipping and COD.

$300 plus shipping and COD for everything. I will consider
offers. I am willing to deliver free within a 100 mile radius of Fort
Wayne, IN.

Oh yeah, I also have an Atari SC1224 color monitor for sale. It's
not cosmetically perfect but not in too of bad shape and the picture is
perfect. I'll take $30 plus shipping and COD.

E-mail me at rsadler649@aol.com if interested or if you have any
questions.

I'll trade everything for a good CD ROM recorder with software.

I use CAB OVL 1.2618. It is, I believe, the most recent one.

Actually I don't much care in which part of the program package the bug
is. In the end it's still a huge shortcoming in CAB.

If we are going to "complain" on CAB I would like to "complain"
on the poor dithering of pictures. In 16 colours it uses only
7 (?) colours and changes the pallete. If you compare to
1st-Guide it looks realy bad indeed. 1ST-Guide has exellent
dithering even in 16 colours and doesn't alter the pallete
either. It's also faster.

Any idea that you could make CAB to use external modules for
dithering or maybe talk to Guido about it? It can be made so
much better. 1ST-Guide proves it.

CAB with the routs from 1ST-Guide (or any other good program
with good dithering routines) would be awesome. Pages
would even look great in 16 colours and in colour mode then.

This is the _only_ thing I have to complain about CAB which
is a very very very good program. I have to order my copy
of CAB 2.5 soon now (I should have done it along time before
but as I have no internet access athom it's no hurry).

>Michael Saunderson.

I also had the same problem - The simple answer is No - But if you want
to use the ZIP for archiving data rather than running straight off it
then Buy whatever ZIP you want for your PC - I have the parallel port
version so I can swap it easily between PC's - and link your PC and ST
together with a Null-modem cable and use Ghost. It's Slow if you are
stuck with 9600 or 19200, but I've still managed to back up 50 Megs off
my HD to a ZIP via a PC by this method and just backup any changes from
now on - So if the ST HD goes down - No problem :-)

It suites me anyway.

>long filenames on all partitions?

Could it be that it is a program that doesn't support long filenames,
'cos then the fileselector automaticly truncates the names. And
perhaps it just stays in long filename mode when a program supports
it.

>o Does SAM not work with MagiC or is it just me? I get the startup sound, but
>nothing beyond that.

some events work for me, but some don't

>
>o And finally, what is <frei> in the application manager and why are all those

This is for all the extenders for is not linked to a specific
application. And yes you may move the *.CP? to cops, but remember that
is its the same as installing cops with the *.CP? extender

> thanks
> jrleek

Well, if they work, you can probably make about $30-35 on each 520/monitor combination, if folks selling them on this newsgroup are getting what they ask. Do all the STs have power supplies (I think they were external on 520s even those w/internal floppies, though they were internal on 1040s)? Since TOS should be in ROM, there's no absolute need for the floppy disk that came with the ST (the Control Panel accessory was the only really useful thing on it and substitutes are readily available from software archives). If any of these have memory upgrades installed, you could have a real find for $13!

Earlier 520s (plain vanilla STs and STMs) did not have an internal floppy drive...you'd need that external drive for that one. If it's an SF354 unaltered, it's only 360K; if it's an SF314, its a 720K drive.

Of course, you could buy some of the networking stuff out there and have a really cheap ST LAN with that stuff too. Wish the thrift shop was in Wisconsin; I'd buy one and give it to my computerless brother real fast!

BTW: 1stGuide uses only 8 colors from the default palette for
dithering in 16 color modes! This may sound paradox, but due
to my taste and experiences this gives the most consistent
results. 'Adaptive' dithers to 16 colors mostly look worse in
my eyes. This can be explained with the principles of color
composing and dithering algorithms. For similar reasons,
Netscape and 1stGuide use the famous-notorious 216 color
palette in 256 color modes.

Guido

1642. NoSTalgia 0.1b1 Released!

Newsgroup: comp.sys.atari.st
Date: 1997-08-09 00:00:00 UTC
From: Philippe.Gerin@advalvas.be
Message-ID: <19970809194614826018@brus11-37.brussel.skynet.be>
Source record: 118587

NoSTalgia is a new AtariST Emulator for the Macintosh.

Version 0.1 beta is available for download.

Warning, this is a beta version, use it at your own risk.

More infos and download:

<http://users.skynet.be/sky39147/>

Regards,

hallvart@post1.com (Hallvard Tangeraas) said:-

>Anyone using the "Oasis" news/mail program and been able to use it
>successfully?

Hallvard, forget version 2, its next to impossible. Version 1.35, does in fact, work fine. BTW, I tried to reply to your last E-mail with details about using Oasis for over a week and it kept bouncing, so I finally deleted it. Just wanted you to know that I hadn't ignored your E-mail! Lets see, if I remember correctly, you said it bombed out on you, right? Okay, again, if memory serves-the archive leaves you with an OASIS135 folder, right? Well, Oasis won't run from that-change the folders name to OASIS and it should run just fine. Everything works offline, so that you don't run up your bill. If you have the RSVE serial port mod. with your STe, (and a 28800 modem) then you can get 38400 connections. I tried E-mailing my config. files along with that last E-mail but...What about if I UUencode them, and upload them to alt.atari.binaries? Then you could use them as an example, along with the original ones? Just let me know, and post specific questions, and we'll nail this sucker down for ya! :)

Source record: 118589

Hallvard, I got your second E-mail and just like the first, I am unable to reply to it, as Oasis/my provider keeps "refusing/reset" on your address. I tried for close to a week, sometimes 3 times a day, on that first E-mail. Its usually just people at America On-line that I have trouble with, but for some reason, my mail just won't go through to you. How about a phone call? Post your phone number here, with the time differential, and I'll try to catch up with you today or tomorrow, and offer advice concerning my experiences with Oasis... Just let me know...! <smile>

If it is just the PS, then its a simple drop-in affair to replace. Call
Best Electronics for a Best replacement power supply, and do it yourself!
Their number is 1-408-242-6950...from 1 to 4pm PST... Good luck! :)

I found the MagiC specific options (in 1.33 actually but I guess 1.35 is no different) in the installer just cause bombs. Pretend you haven't got MagiC when clicking on the installer options and it works ok!

> I assume CRSHDUMP.TOS dumps memory data from a crash, MEMEXAMN.TTP
> examines memory somehow,

memexamn shows you what chunks of memory are being used by what programs if you run it without parameters. If MagiC barfs on you and asks if you want a system dump to disk you can either say no, or type a drive letter whereupon it dumps the whole of memory to the root directory of the drive giving it a silly filename which is obvious when you look 'cos it's got some $$$ characters in it (it also happens to be the same size as your memory so it could be 14Mb!). You can then drop this on memexamn and it will show you the memory at the time the system halted. Delete it just like any other file when you're done with looking at it. It's most useful when programming but the no arguments option can be useful to track down which programs are badly fragmenting your memory.

Thanks for the help! I was wondering if I could take the PS out of a 1040 STf that I have and put it in the 1040 STE as it's the more important machine for me (extra memory for sequencing).

Would there be any compatability problems ?

And how would I do this ?

Thanks again,

-Arik-

>>So probably you use True Color screen resolutions, maybe without NVDI ?
>
> 12MHz?????
> Have you modified your ST somehow? Any more info available?

It's not too difficult, although of course you really need some experience in electronics. All the ST internals work with 12 MHz, apart from the 68000, so you'd need to exchange the CPU by a 16 MHz version. Then you need to improve the bus termination (it's been done lousy by Atari), exchange the main 32 MHz clock by a 48 MHz, and - hey - the machine runs already faster. Two minor ;-) things however. The video hardware has completely changed timing now. In order to still use the SM124 I had to put in some circuitry that creates proper VSync, HSync and DispEnable signals, it's no extra effort to do this such that instead of 640x400 you'll get 960x544 pixels, which is really nice. The other thing is that you'll create your very personal disk format, unless you rectify the floppy timing too. No extra effort again to care for HD floppies. Sound chip and ACIAs need their original clocks too, to have proper pitch and enable the keyboard again.

The underlaying ideas where taken from a very old issue of the german ST Computer magazine. My mods work now for about five years without problems. Once the video shifter died and had to be replaced, but I believe this had nothing to do with my modifications. Still this very ST (originally a 520 ST+) is my develop-ment machine for STinG.

Cheers Peter

PS.: Guess I forgot to mention the four bus buffers (TTL LS) had to be replaced by ALS types too ...

Do you mean you don't get the MKM mouse pointer till you change res or load the
MKM ACC, or that's when you lose the MKM mouse pointer?

I've never had any problems with MKM and NVDI, but it doesn't work for me under
MagiC.

That OVL uses the STiK API, thus only works with STinG or STiK. It does not
work with ASH's PPP-connect.

h> I'm having problems making the "domagic.prg" to work together with
h> the "Thing" desktop/MagiC.
h> It's supposed to rename the "magxboot.prg" (auto folder MagiC booter)
h> to be renamed back to "magxboot.prg" after the user has set the
h> computer to reboot into TOS.
h>
h> I'm not sure where I should put it as nothing seems to make it work.
h> Any ideas?

Set it up either as a desktop icon or on a function key in your standard TOS
desktop and just run it. It causes a reset in Single TOS and will reboot
with MAGXBOOT.PR already properly renamed.

h> Also, what is "wdialog.prg" for? I have it installed in my Auto
h> folder for some reason.

It makes additional windowed dialogs available. Versions from v1.11 and
below aren't needed with Magic (it adds the dialogs to systems that don't use
Magic) but, depending on the applications you run, WDialog v1.96 is needed
even with Magic v5.11.

Place it in your Auto folder before NVDI, accordig to the NVDI programming
docs.

Hi Terry, on 04 Aug 97 you wrote: ...respect, brethren
TM>
TM> Is there any way to change the name of the Printer and Trash icons
TM> in MagiC?

Not that I know of, but I was going to try to mess around with the
APPLICAT.INF file in the GEMSYS/GEMDESK folder. I'm not sure it'll work
though...

morphic@speakeasy.org (Fibrillation) said:-

>Thanks for the help! I was wondering if I could take the PS out of a 1040
>STf that I have and put it in the 1040 STE as it's the more important
>machine for me (extra memory for sequencing).

You should be able to. Why not call up some of the Atari dealers with
1-800 numbers, just to be on the safe side, and ask! :)

>Would there be any compatability problems ?

None that I'm aware of...

> And how would I do this ?

1) Unplug the machine...!
2) Check rule number 1 again...! <smile>
3) Turn machine over-remove screws from square holes (not 3 screws for the
floppy drive-they can stay)
4) Turn machine back over and carefully remove top-its a bit tricky around
the floppy drive, so go slow.
5) Remove metal shielding from over Power supply. (PS sits in upper left
hand corner of machine-directly behind on/off switch-switch is actually
a part of the power supply) There are usually metal tabs to bend in some
places as well as tiny screws. Only 1 shielding usually has to come off,
but if the fit is super-tight, you might have to take all shields off.
Not hard-just more screws.
6) Remove 3 screws from backplane where PS attaches, and remove 2 screws
that hold the PS to motherboard. Unplug power supply.
7) With a gentle rocking motion-ease power supply out from 2 metal tabs that
hook into the motherboard and lift out. (watch on/off switch-it goes in a
slot in the backplane and can catch)

Replace old unit with new one and reverse the process to re-assemble...!

>Thanks again,

No problemo! :)

>change to a new provider I decided to give myself a more "permanent"
>address as well -the new one being: hall@post1.com
>even though the other one (hallvart@sn.no) will still work)

Nope, that one doesn't work for me either... I tried a short reply, and
it reset/refused again... Seems I just can't get there from here! :(

>It also seems that the folder has to be on the root of a harddisk
>partition! Boy, this program sure is picky!!!!
>So I ended up installing f:\oasis\
>(also tried d:\oasis\ which worked fine as well)

Right, forgot to mention that-just assumed you were doing it. Sorry!
Just don't forget to change the paths in STARTUP.NOS to reflect where
you've got Oasis.

>I do. I mean, I built the RSVE circuit and have tested it with a 33.6K
>modem -worked fine!
>Haven't got anything higher than 14.4K myself right now, but hopefully a
>33.6K is right around the corner.

Makes a big difference-I highly recommend it on any non-SCC chip Atari.

>Sorry for all your problems due to my wrong reply address.
>I don't think you need to send me much, but if it's not too much trouble,
>perhaps you could email me the "dial.txt" file so I could have a look and
>compare.

Here it is:

```
# Dialing configuration for UK-Online@28800 baud.
configure:
init "AT&F1\r"
dial_cmd "ATDT"
number "886-6086\r"
retries 99
#
execute:
init
cwait 10000 "OK"
```

```
dial
cwait 50000 "CONNECT" "BUSY" "NO CARRIER" "NO DIAL TONE"
wait 6500
send "YOURUSERNAME\r"
wait 3000
send "PASSWORD\r"
wait 6000
send "p\r"
send "ppp mru=1500 idle=300\r"
```

Note that I had to take out the lines where Oasis "read" whatever my ISP sent, because it was not responding to it. So I logged on with CoNnect, noted what the logon process required, and "timed" everything to send the correct response. Oasis may work fine reading what your ISP sends. A little experimentation is inevitable. You should logon with a Comms program and see what is required if you don't already know.

```
>I still have some questions though:
>
>-I tried to set up "Everest" as the default editor instead of the rather
>crappy "oasis_ed.prg" (which doesn't use the standard keyboard shortcuts
>-rather irritating).
>Well, Everest works fine when trying to write a message except for one
>minor detail.... it doesn't read the configuration file!!! ("everest.inf"),
>which in other words ask me to register the program all the time (and I've
>already registered it), and it obviously won't keep the other sttings
>either. Any way around this?
```

Hmm...odd, that! You didn't actually move Everest from its original place, did you? I've set up ZIP, ESS-CODE, EDITH, and CD-PLAYER with no problems. All of them read their files from their respective directories...I've not used Everest however... :)

```
>-There's a file called "domain.txt" -what's this for?
>It seems to contain a lot of phone numbers and data for UK Internet
>providers. Should I add my provider to this list? Will I somehow be able to
>choose between all of those in that list when I dial? How do I actually
>dial up my provider?
```

That is a file used by Oasis, and one I've never had to do anything with. You will use a combination of the files DIAL.TXT, STARTUP.NOS, and the file OASIS.CFG to setup up a correct logon... Hope this helps! Just post other questions as you come across them, and we'll work on it! See ya!

>laying around. WHat's up with that?

The 520 without an internal floppy is one of the original 520ST's. Until the 1040ST was introduced, there was no Atari ST-series machine with an internal disk drive (the 520STfm came later). Some of the earliest 520ST's came with only boot ROM's and TOS loaded from disk, but most of those were upgraded by the owners when TOS on ROM became available, so chances are slim that it is one of those. Unless it has been upgraded since, however, it almost certainly has TOS 1.0.

At 6 bucks per ST and 7 per monitor, I would think it would be definitely worth purchasing it all, as you should have little problem reselling them. Even if defective, you should at the least be able to recoup your original investment by selling them for parts.

If the monitors are color (SC1224's or SC1435's), they are definitely worth more than $7, and with the appropriate cable and sync-adapting circuit, can be also be used by Amiga, Apple IIgs, and Coco3 owners. If they are SM124's, they would still be worth more than $7 to any ST owner that has only a color monitor, or those in need of a backup.

Source record: 118615

On 08 Aug 97, after being hired by Jack Tramiel, Roger Cain said:

RC> The standard way of doing this is to use LIMITMEM.TTP which comes
RC> with the MagiC package. This stuffs something into the programs header
RC> which causes MagiC to limit the allocated memory when loaded. I use it
RC> with 1st. Word which (being written prior to multitasking) has the
RC> attitude that "If I'm loaded I'll keep all the memory".

Thanks! Just tried it and it works great. Would be nice if there were some
kind of docs for those extra programs. Any idea what these do:

DUMP.TTP
FC.TTP
LABEL.TTP
HARDCOPY.PRG

I assume CRSHDUMP.TOS dumps memory data from a crash, MEMEXAMN.TTP examines
memory somehow, and SPLIT.TTP splits large files into smaller chunks, but it
would be nice to know HOW these work.

==========
From: mtilley@cix.compulink.co.uk (Mark Tilley)
Date: 25th July 1996
Subj: Protext relaunch

After a period during which Protext was not available for purchase, I can now announce that we will be releasing Protext 6.7, initially for the PC. Retail sales will be by mail order only to:

Protext Software
39 High St
Sutton
Ely
Cambs
CB6 2RA

EMail enquiries to me as usual.

Protext Software is a partnership of 4 people including myself and Gavin and two others who will be handling the sales and distribution.

The copyright of Protext software is owned by my company Silverdock Ltd., through which some business sales and consultancy is conducted.

Protext 6.7 is a consolidation rather than a major update (and is not significantly different from v6.6) , but we have thoroughly revised the documentation for the first time since 6.0. We are working (albeit part-time) on version 7.0, more of which in due course.

The relauch price will be about £40. As this is a new venture, it is not possible initially to offer discounts either for trade or upgrading from earlier versions.

The documentation still covers the Atari version and we will release v6.7 shortly for ST/TT/Falcon.

Mark Tilley

If the page is not in the cache the program should get the same page again
in the same way it got it the first time, using the same URL again. All
that is needed is remembering the _complete_ URL. We're not talking kB's
or MB's here, but a few decabytes :-).

I use the demo-version of, I believe, 2.0a, and CAB OVL 1.2618.

(Why the demo? Well, wouldn't dream of buying a program with so many
problems!)

>There are a few out
>there such as http://www.sidewalk.com/ (A commercial MS site) that will
>not allow CAB to connect, but crash? Post a few and let's see what's
>happening. I can surf hundreds of sites now without crashing.

I wrote that CAB crashes every ten minutes. That was an exagerration
maybe. But surfing hundreds of sites is out of the question.

Try <http://www.alien4.com>. After loading a few of the picture heavy
pages there, my CAB unavoidably crashes. But generally I don't see any
pattern. After a few sites a crash is to be expected. It doesn't matter
much what sites they are.

> Maybe there is some other reason your having problems :)

That could very well be. Maybe four MB is not enough...

1676. MagiC 5.11 questions

Newsgroup: comp.sys.atari.st
Date: 1997-08-09 00:00:00 UTC
From: hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk
Message-ID: <5658_hsideras@mettav.demon.co.REMOVE.TO.REPLY.uk>
Source record: 118713

Hi Terry, on 03 Aug 97 you wrote: ...respect, brethren
TM>
TM> I have some questions about MagiC 5.11. Any input will be
TM> appreciated.

I know I'm late getting to this so I'll just make comments that don't seem to have been covered yet.

TM> o Is there a function, such as on the Mac, for cleaning up the
TM> desktop and neatly aligning all the icons?

The desktop raster function (in Options/Preferences) as mentioned by Andreas is particularly ineffective IMO. I've never seen it have any beneficial effect on the alignment of desktop icons whatsoever.

It's particularly annoying that there seems to be some 'drift' of icons so that they overlap each other - particularly when resolution is changed and you always save the latest arrangement to MAGX.INF.

TM> o MagiC apparently boots in ST-Med. Is there any way to change
TM> that? I don't mean the desktop, but for the AUTO folder
TM> loading/display.

Isn't this related to the NVRAM setting on your Falcon rather than Magic? Try resetting it to your preferences.

TM> o Is there a boot manager which directly supports the MAGX.INF file
TM> the way Stoop supports NEWDESK.INF? That is, change the screen size
TM> and colors of a single file instead of keeping a separate file for
TM> each resolution?

As suggested elsewhere, you could set up XBoot to handle it, but why not take a look at McFly from the InterActive web site. It's not what I'd call 'finished' yet, but it can handle the Auto/Apps folder (or Magic/Start or whatever you call it) as well as MAGX.INF's.

TM> o And finally, what is <frei> in the application manager and why
TM> are all those extenders assigned to it? Can I delete, say, the
TM> *.CP? extenders and reassign them to Cops?

It just means you haven't installed any applications that use this extender yet. Install COPS in the standard way and assign the extnders that you want. You may want to install CPX and CPZ to COPS seperately so that you can give them different icons, and then delete the CP? extender.

TM> very good in true color.

Ever since I heard about it its the only one I'll use. A shame it's been
stuck at v2.49 for so long though... B^{<

TM> However, am I missing something, or is there no way to "shut if off"
TM> without actually deselecting the appropriate buttons? It would be
TM> nice if there was some type of easy toggle.

You can quit with Ctrl-Right click if that's what you mean, but if you just
want to remove the display while it's still running then I think what you've
said is right.

That said, occasionally I seem to stumble across a keyboard combination that
switches the display from my first option to my second one. It may be a
complete fluke, because I've never worked out how I did it...

TM> Thanks for the tip!

Yes, KAOSDESK was a German replacement desktop from a few years back.

AFAIK EOS was the commercial version of this desktop and was sold by System
Solutions over here for a while...

Can I guess that this was in a 24-bit or 32-bit mode? There was a known bug
that got fixed in the beta testing of the latest version of Imagecopy (v4.10)

I think I could get around this by switching to "Auto-Select"mode rather than
the mode that matches your actual card.

S> Also, I have been searching for an image processing application. The
S> best I have used so far is Photoline. Does anyone know why Positive
S> Image is so sluggish on my machine? It draws out pictures one box at

That's just the way it is from what I can see. v2 of Positive Image is
supposed to be much faster (I haven't seen it though), but I doubt it'll be
as rapid as Photoline (unless something really spectacular happens).

TM>>
TM>> o MagiC apparently boots in ST-Med. Is there any way to change
TM>> that? I don't mean the desktop, but for the AUTO folder
TM>> loading/display.
HS> Isn't this related to the NVRAM setting on your Falcon rather than
HS> Magic? Try resetting it to your preferences.

Hold that thought.

Take a look at the #_DEV parameter in your MAGX.INF. This may have something
to do with it... although it may only affect the resolution you arrive in
after you hit the desktop - it works a little differently on my machine.
Experiment.

You may also like to find some helpful utilities to use with Magic, such as
SMU and Appline (equivalent to W95 Start button and Toolbar), MAGICINF to
ease the modification of your MAGX.INF file (v0.34 handles Magic v4 but I
don't know where to locate a version that handles Magic 5 INF files).

There are lots of others too...

1687. Ataxx on Atari ST ?

Newsgroup: comp.sys.atari.st
Date: 1997-08-09 00:00:00 UTC
From: pressibus@lenet.fr
Message-ID: <871121156.4119@dejanews.com>
Source record: 118724

Hello happy players !

Ataxx is a strategy board game which looks like (a little) to Reversi / Othello.

There are Ataxx on many platforms : Dos, Mac, Amiga, Imagination Network, Unix/Linux, Nintendo, CGI server, E-mail, Java applets, Palm Pilot, Psion, OS2, Windows.

I have listed all Ataxx games in my site http://www.lenet.fr/pressibus/bricbroc/page10.html.
If you know Ataxx, if you are curious, if you like strategy board games (Ataxx looks like, a little, Reversi / Othello), I invite you to know these games, to play with java applets, to know the history and evolution of Ataxx.

But, there is a question : WHAT ABOUT AN ATARI ST ATAXX ?
I think that it exists, but I am not sure. I fear a confusion with a game which had the name Ataxx but was another sort of game, a vertical shooter.

So, old fans of Atari ST, I launch here a call to have informations to such Ataxx... Thanks to write me and answer here.

--
Alain Beyrand - Pressibus pressibus@lenet.fr

Note : perhaps it exists an Atari ST Ataxx which have another name. Elsewhere, there are many names, Spot, Chello, Flippant, Attacks, Backstab, Flippant, Phage, Yova and so...

This is not possible in some languages.

> All that is needed is an option, a box to check, that says "my fonts and
> keyboard are according to Latin 1, so no translation of the incoming and

I'll thik about it. But this option would affect all(!) fonts together.

> When I go to e.g. Alta Vista to search for something, I type in a search
> word and get a list of hits. I then go to one of the links in the list. If
> I then press the "back" button in CAB I should get back to the list of
> hits (that's what happens in every other browser), but in CAB I get back

Yes. The problem is, that the "normal" Atari doesn't have much RAM.
Netscape and Internet Explorer do cache all the pages which are
currently in the history, so they can easiely restore the page
when going back with all the content of the forms. This is no problem
on PC, Mac or Unix, because there's enough RAM available to do so
(No wonder these browser need several megabyte of RAM, Netscape 4
needs >12 MB of RAM on Mac). On Atari I can't expect that all the
users have such amouts of free RAM.

1689. Atari 520 STs with moniters at Thrift, any point?

Newsgroup: comp.sys.atari.st
Date: 1997-08-09 00:00:00 UTC
From: jrleek@ecst.csuchico.edu
Message-ID: <5shdgl$9jb@charnel.ecst.csuchico.edu>
Source record: 118726

At my local thrift there's 4 520's with moniters for sale. (There's also a 1040, but I'm definatly buying that.) For about 6 bucks per ST, and 7 per moniter. Is there any point to buying them all? Can I sell them or something? Also one of the 520s doesn't have an internal floppy and instead there's an external laying around. WHat's up with that?

thanks

jrleek

I _have_ talked with Alex some _years_ ago about such topics!
However, since Alex insisted on development in Pascal, we
couldn't agree. I prefer using C (*after* using Pascal and
finding it inappropriate for serious projects!), and this is
by far the most common programming language in the world for
efficient *and* portable developments, for good reasons!
This is also important for the possibility to use common source
codes across different systems, otherwise you couldn't handle the
complexity of today's programs, especially of decent WWW browsers.
Netscape, for example, could not be so powerful if it couldn't
re-use commonly available libraries (which are written in C, of
course, for portability across various systems).
In the Atari domain most people don't seem to care about these
facts, thus you must live with limitations...

BTW: My dithering routines (and Netscape's, too!) are derived from
the public JPEG library from the Independent JPEG Group (at least
the default Floyd-Steinberg variant), with special optimizations
and adaptions from my side for Atari systems :-).
Conversely, I recently contributed some algorithms to the JPEG
code in collaboration with the organizer, which will probably
be incorporated in the next public release. Such topics also
seem impossible to talk about in the Atari area, unfortunately.

Regards,
Guido

Hallo again,

Well, www.alien4.com is an odd site. I think it's a pseudo-virtual domain hosted site and CAB doesn't do a good job with host negotiation. The linked URL is www.alien-resurrection.com and I could only view it (legible) using TrueColor and using a proxy server the "ANONYMIZER". Otherwise, CAB doesn't crash, but doesn't receive any data ;) If you want info on the upcoming ALIEN RESURRECTION (4), (Yes, Ripley is back!) you can connect to:

http://www.geocities.com/Area51/Vault/9827/alienhive.html
(Best viewed 256/TrueColor)

As far as memory goes, check your available RAM after eveything has booted-up and make sure in your CAB/Option/Cache/Image RAM (Max) is less than your available RAM. There's probably not much there on your Falcon if your running a lot of Auto's/CPX/Acc's. Upgrading to 14meg does help. Good luck.

Regards,

Charles

P.S. This is my 4th attempt to post a followup. Thus, the try to my own message ;(

1697. Now that toad is gone?

Newsgroup: comp.sys.atari.st
Date: 1997-08-10 00:00:00 UTC
From: jmmcgowan@worldnet.att.net
Message-ID: <33EDD6E7.2DB@worldnet.att.net>

I know how it works (I was a beta tester :), but I was confused by the
statement at the top (still am). And even though the ACC, in theory, is only
for editing/configuring, in fact, it does change the behavior, especially on a
Falcon. I've had the ACC actually cause me to lose my AUTOMOUS settings. In
fact, the ACC doesn't work well at all on a Falcon (I didn't have a Falcon when
I was beta testing it).

Yes, that use to be a problem with Yahoo and Alta Vista, it's fixed, but now
I got the same problems with Lycos search, where it didn't was before. Same
URL can give a runtime error and quit CAB. So,- in some way Bertil Wennergren
is right.
The only real stable OVL I have had was version 1.18, but that OVL did not works
well with Yahoo or Alta Vista. At last not in CAB 2.0. But it did with CAB 1.5.

I use 7 MB for the image cache and 10 MB HD Cache, so I don't expect this to be
the problem.

cheers

1704. FS/T: Atari ST software [08/10/97]

Newsgroup: comp.sys.atari.st
Date: 1997-08-10 00:00:00 UTC
From: vga2000@ix.netcom.com
Message-ID: <33f1d611.12490878@nntp.ix.netcom.com>
Source record: 118542

All Video Game Advantage (VGA) FS/T lists are updated weekly and are
available on the WWW at http://www.io.com/~vga2000/

'Sales Conditions' and 'Ordering Instructions' sections are at
the end of this message. Please read them both carefully *before*
asking any questions, or placing any orders. Thank you!

This list was last updated on 08/08/97

NOTE: There are currently 1669 ORIGINAL game screen shots available
on my web site. Unfortunately, none are for the Atari ST computers,
at this time...

NOTE: There are currently 857 game manuals available on my web site.
Unfortunately, none are for the Atari ST computers, at this time...

I have the following Atari ST software for sale or trade.

Unless specified, all items are *NEW* and are still shrinkwrapped.

SOFTWARE:

ATARI ST COMPUTER:

New diskette(s) [still shrinkwrapped!]:
$ 5.50 Arkanoid (Taito)
$ 5.50 Art & Film Director (Epyx) -- $4 shipping, due to weight,
counts as 1st item
$ 4.50 Battleship (Epyx)
$ 2.50 Bobo (Infogrames / Terrific Software)
$ 4.50 California Games (Epyx)
$ 4.50 Championship Wrestling (Epyx)
$ 2.50 Crash Garrett (Metal Hurlant)
$ 4.50 Death Sword (Epyx)
$ 3.50 Devon Aire (Epyx)
$ 3.50 Dive Bomber (U.S. Gold / Epyx)
$ 2.50 Dragon Scape (Free Spirit)
$ 3.50 Final Assault (Epyx)
$ 4.50 GFL Football (Gamestar)
$ 3.50 Golden Path (Firebird)
$ 3.50 Goldrunner II (MicroDeal)
$ 4.50 Impossible Mission 2 (Epyx)
$ 4.50 Karateka (Br0derbund)
$ 3.50 Knight Orc (Rainbird)
$ 4.50 L.E.D. Storm (Capcom)
$ 3.50 Lands of Havoc (Antic Software)

$ 4.50 Last Duel (Capcom)
$ 4.50 Man Hunter: New York (Sierra)
$ 2.50 Mean 18 Famous Course Disk Volume II (Accolade)
$ 4.50 Metro Cross (U.S. Gold / Epyx)
$ 4.50 Paint Pro (Abacus Software)
$ 3.50 Prime TIme (First Row)
$ 4.50 Quadralien (Spinnaker)
$ 4.50 Renegade (Taito)
$ 4.50 Space Quest: Chapter I (Sierra)
$ 3.50 Star Quake (Terrific Software)
$ 3.50 Star Ray (Logotron)
$ 6.50 Star Wars (Br0derbund)
$ 3.50 Stunt Track Racer (Microplay)
$ 3.50 SwiftaR (Accustar)
$ 4.50 Techno Cop (U.S. Gold / Epyx)
$ 4.50 The Advanced OCP Art Studio (Rainbird)
$ 4.50 The Games (Epyx)
$ 3.50 The Pawn (Rainbird)
$ 3.50 The Sentry (Firebird)
$ 5.50 Tower Toppler (U.S. Gold / Epyx)
$ 5.50 Warship (Strategic Simulations, Inc.)
$ 4.50 Winter Games (Epyx)
$ 4.50 World Games (Epyx)
$ 4.50 World Karate Championship (Epyx)
$ 3.50 Zero Gravity (MicroDeal)
$ 3.50 Zynaps (Hewson)

*****

SHIPPING ANYWHERE IN THE CONTINENTAL U.S. is $3 for the first game and $1.25 for each additional game, unless otherwise listed. If you order enough items I can weigh the order as a package, which might reduce the shipping costs. Foreign orders welcome.

Large orders will be weighed as a package, to reduce shipping costs.

SALE CONDITIONS:

1) Sales are first come, first served. If you are looking for something that isn't listed, please don't ask (because if I had it, I'd list it).

2) Everything is sold as is. Unless specified, all games and systems have been tested and are in working order. I very rarely sell items that aren't working, but if I do, they are clearly labeled as such.

3) Trade offers, in particular for items that I need, will be considered (especially if the trade offer overwhelms me). I collect for over 50 different systems, so please feel free to send me a trade list. My want lists are on my web site.

4) Buyer has ten (10) days to send payment, and pays all shipping costs. Shipping cost depends on both the weight of the order and the distance that the order must travel, unless a set amount is already listed. No orders will be sent C.O.D.

5) Since items will be held specifically for you, if you aren't serious about buying, please don't place an order!

6) No package deals on games or systems. All prices are clearly listed.

7) If you have a problem with the listed price, please remember that nobody is forcing you to buy from me. I have been in business since 09/05/93, so I have a good idea how to price items. My personal philosophy is that something is only worth what someone is willing to pay for it.

8) Payment must be made in U.S. funds (either check, money order -drawn from a U.S. bank branch-, or cash. Orders from outside the U.S. are also accepted (also, please check out my want lists, since some items are only available outside the U.S.)

9) I reserve the right to refuse any sale or trade offer, and to correct mistakes made while typing this message.

*****

ORDERING INSTRUCTIONS:

To reserve any item(s) listed here, please do the following:

1) carefully read the SALE CONDITIONS section first,
2) please make sure that you are able to follow through on your order *before* you place it,
3) next send me a list of the items that you are interested in,
4) also include your full name and full postal mailing address (this information is for internal VGA use only)!
5) I will reply with a shipping information message for your order.

Thank you!

Hmm...a little confusion here...Maybe you mean an Atari ST -or- an Atari
1200? The 1200 is one of the 8-bit line, and the ST is whole different
ballgame...! :)

Well, they are not as active as they used to be-that much is certain. (damn
shame-too!) However, they still carry Atari inventory, and you can call and
order stuff from them. I still do, all the time. I've always liked Dave and
Jennifer (and Ray when he was there), and I order from them whenever there
isn't too great a price differential... :)

You need to put a copy of everest.inf into the Oasis folder, it should
then work fine.

> -There's a file called "domain.txt" -what's this for?
> It seems to contain a lot of phone numbers and data for UK Internet

> choose between all of those in that list when I dial? How do I actually
> dial up my provider?

The domain.txt is a list of domains that have been resolved to give
their IP address, to connect to a computer your machine needs to know
the IP address, so it takes the name (eg mail.isp.com) and looks it up
on the Domain Name Server (DNS) which will give it an IP address (eg
100.90.23.56) in order to save a bit of time, regularly used doamins are
stored here, there should be no problem deleteing it.

No, this is not enough. Not all form data is part of the url. If using
the POST method the URL is always the same, the form data is not
part of the url.

CAB uses the same 8 colours in 16 colour mode and the same
216 colours in 256 colour mode. The only difference is, that
CAB doesn't use floyd steinberg dithering.

Hallvard Tangeraas <hall@post1.com> wrote:

> Well, the timing part might be a little hard as this might change from each
> time....

You needn't worry, the time is the MAXIMUM length of time that NOS will
wait for the specified string to appear, if you set it to 60 seconds and
the message appears in 2 seconds then the script should automatically
move on to the next part and not wait the full 60 seconds. This applies
only for a wait command with text to search for though, a "wait [time]"
should always wait the specified time.

> This is the script I've been using to log on to my provider using
> "Connect";
> (here slightly modified for PPP login and not to reveal my password ;-)

> send secret_password
> bell 2
> echo " "
> Will it be something like this in "dial.txt" for Oasis then:
> [beginning of script not shown here to save space]

[snip original script]
I would have thought this would work better:

```
execute:
init
cwait 10000 "OK"
dial
cwait 50000 "CONNECT" "BUSY" "NO CARRIER" "NO DIAL TONE"
cwait 50000 "rname:" "NO CARRIER"
wait 700
send "ppp\r"
wait 10000 "ogin:"
wait 700
send "hallvart\r"
wait 10000 "word:"
wait 700
send "my_secret_password\r"
>
>
```

> (I'm not sure what the two last lines in your script were for though, but I
> suspect them to be something you need in order to log into the system).

If you mean mru and idle then they are option parameters that some
systems allow you to set, the MRU should be left well alone unless you
have good reason to change it and the ide time is the length of time the
ISP waits aftter your connection is idle before they drop the line.

> I also noticed that the script doesn't read the stuff sent from my provider
> like "Username:", "login:" and "Password:"...

I'v eno idea why his setup didn't do it, the one that I use certainyl
does, it makes the processing much faster, it might even be worth Ronals
while to change it in order to shave quite a few seconds off the login
time. Similarly in the script that I modified for you above, the "wait
700" statements are quite possibly not optimum, you may not need them
atall, however seeing as they only wait for 0.7 seconds I thought it
best to put them in to begin with. If you haven't done so already, I
strongly recommend that you get hold of the POP3 version of NOS. Most
providers do not offer SMTP delivery anymore which is the only way that
NOS can currently recieve mail, the POP3 version also fixes a bug with
the kill file facility and is well worth getting. It is on demon's FTP
site somewhere, if you go to ftp.demon.co.uk/pub/atari, it should be in
there somewhere, probably in a KA9Q/NOS directory.

-> Austin walshe
This is James from Boise, Idaho - E-MAIL jdburr@acpu.com
Please be wary about adding that into your machine. I had a
friend with an Atari TT that had some very serious problems related to
CaTTamarans. He had to send his computer off to be repaired and it
came back with that causing all his problems! Sorry for that news but
it happened and I thought that you should know that it may be more
trouble than it's worth.

Hi

I also had problems dowloading ST+19. Gets about half the file and
CAB/OVL aborts with s/w errors. Tried twice didnt get as far 2nd time.
Tried with proxy server but that blocked me. Tried with CAB2 demo,
that got half was, some error occured and the download was restarted
from scratch. Had enough by then!

Any ideas whats wrong?

-> basically requires a signal fed to pin 2 of the Shugart bus to tell it that
-> there is an HDD disk present.

-> Speak to 'ya later!

-> --
Hi! I use an Atari 520 ST with TOS 1.4 and I successfully
upgraded to a high density floppy drive. I use a TEAC FD-235HFN drive.
Ensure that any drive that you use you do need one outputs density
select on pin 2. That pin tells the computer what density of disk that
is inserted into the drive so it can adjust the transfer rate
accordingly. High density drives transfer DATA at twice the rate as
double density drives so the computer needs to double the clock
frequency from the floppy drive controller to the drive itself. If you
need more information contact me at jdburr@acpu.com and I can be more
specific.
```

James

1719. Re: Anyone using "Oasis"? Need help setting up.

Newsgroup: comp.sys.atari.st
Date: 1997-08-10 00:00:00 UTC
From: thechyld@pcc-uky.campus.mci.net
Message-ID: <871243800_OASIS_@pcc-uky.campus.mci.net>
Source record: 118557

In article <33ee14722010d39@post1.com>
hall@post1.com (Hallvard Tangeraas) said:-

>And they both work. I've also recieved mails from others recently to these
>addresses, so I don't understand why you can't reach me via email. Perhaps
>I (or someone else) can help if you give some more, detailed information
>about what you do and what happens next.

Like you said, I think I got the wrong address for both those E-mails because
the last 2 I sent seemed to go through. Thanks!

>Haven't though of that since everything seems to work fine after I rename
>the folder to "oasis" and put it in the root of some partition.
>Is "NOS" the program which does that actual dialling/connection to my
>provider?

Right. Oasis sits on top of NOS...

>This is the script I've been using to log on to my provider using
>"Connect";
>(here slightly modified for PPP login and not to reveal my password ;-)
>
>waitfor "Username:"
>send ppp
>waitfor "login:"
>send hallvart
>waitfor "Password:"
>send secret_password
>bell 2
>echo " "
>
>Will it be something like this in "dial.txt" for Oasis then:
>
>[beginning of script not shown here to save space]
>
>execute:
>init
>cwait 10000 "OK"
>dial
>cwait 50000 "CONNECT" "BUSY" "NO CARRIER" "NO DIAL TONE"
>wait 6000
>send "ppp"
>wait 6500
>send "hallvart\r"
>wait 3000
>send "my_secret_password\r"

Going by your first script-this looks like a good start. This just goes to show how different ISP's can be-yours wants PPP at the start, mine doesn't want PPP picked until the end!

>(I'm not sure what the two last lines in your script were for though, but I
>suspect them to be something you need in order to log into the system).
>I also noticed that the script doesn't read the stuff sent from my provider
>like "Username:", "login:" and "Password:"...

The last 2 lines set the limit for timing out, actually starting PPP, and etc,... My script doesn't but it doesn't mean that the original Oasis DIAL.TXT won't work with your provider-it just might! :)

>Nope, I just went into the "tools" configuration and replaced the internal
>editor with an "external" editor...
>It works fine however if I *add* Everest to the tools there, but this won't
>do any good since I need to replace the editor with Everest so I can use it
>whenever I want to write/reply to a message.

Okay, how about coping Everest and its associated files into the Oasis folder, then configuring it to run from there? (or an additional copy if you still want Everest available elsewhere...)

>The replacement address (hall@post1.com) should also work as I've tried it
>and used it for a few days already.

This address seemed to work fine for the last 2 E-mails I sent...! ;)

Mint+Mintnet (and Multitos) is one of the best things happened
to my Falcon so far :-) but ...

I cant get rid of message:
Aug 10 11:54:30 falcon pppd[16]: CCP: timeout sending Config-Requests
Aug 10 11:55:02 falcon pppd[16]: CCP: timeout sending Config-Requests
when connetting to my ISP.

I have tried variables -bsdcomp and -pred1comp in options file
and in .ppprc file in /home/root folder as mentioned in manuals
but no change. I don't have see those annoying messages on screen
anymore because I changed all references to /dev/null from /dev/console
in /etc/syslogd.conf -file. Just curious what I'm doing wrong.

My system is Falcon 14Mb, Mint1.14.2, AES 4.1, PPP-2.2.0e.mint (Chat
from KEMD because version from ppp-2.2.0e didn't work?) and NET-1.01

1726. Voicemail on the Falcon - tips?

Newsgroup: comp.sys.atari.st
Date: 1997-08-10 00:00:00 UTC
From: dreibel@idirect.com
Message-ID: <33ed15c9.0@lagoon.idirect.com>
Source record: 118620

the president of TAF and I were recently talking to each other and we thought that it might be a good idea if each of us could set up a voice mail system on our Falcons. We do know that either Coma or the latest version of ConNect would do nicely for the software.

Now it's a hardware question - namely, to wit, are there any brands of voice modems that are superior to others when run in this fashion on a Falcon? And are there any brands that we would need to avoid? (We know that there are major problems with Zoltrix brand modems when used with Ataris, and I had heard of some people who have had problems with US Robotics models).

Looking forward to some answers......

This is only for use with Magic 2. Magic 4 & 5 use part of the Install
Application dialog to limit memory usage, which is probably why it doesn't
work when using Semper as the Shell.

Maybe someone can verify this. I have heard that the early ST's had the sockets for accepting the TOS on ROM but they decided not to place the ROM chips in the machine. Dennis, you may wish to look inside your computer for six empty sockets. If they are there then I've got TOS 1.00 on six chips I can give you (plus postage). Let me know.

Gosh Peter, you must have some fabulous electronics stores in your area.

The 19 pin ASCI connectors are as rare as hen's teeth (Old Irish saying,
meaning very hard to nearly impossible to find).

After searching many suppliers, only Maplin in the UK seems to stock them, but
for how long. They also have the 13 pin ST monitor connection & the 14 pin
disk drive connecters also.

AFAIK, there were some German DIY host adapters, possibly available as kits
from the Magazines.

AK> described in the programmer's documentation of Atari's MultiTOS.

I'm not a programmer and I don't have the programmer's docs for MultiTOS (nor do I want them). I want something that will easily work for any memory-hungry program, and LIMITMEM works just fine. Why are you recommending against it?

Source record: 118434

I have just bought a Philips CM8833 Colour Monitor Second-hand.

I am waiting for a user manual from Philips

Will you please Email me the pin connections between:

The Atari 13pin DIN Video Port and the CM8833's 9pin DIN RGB Socket

and/or

The ATARI 13pin DIN Video Port and the CM8833's SCART Socket

Details of both connection types would be appreciated

Do the "Horizontal Sync" and "Vertical Sync" pinouts have to be connected?

Thanking you all in advance

Yup the decision of Pascal looks a bit strange. Maybe CAB 3 will
be in C. ;-)

> This is also important for the possibility to use common source
> codes across different systems, otherwise you couldn't handle the
> complexity of today's programs, especially of decent WWW browsers.

Yup it sounds like a important feature to make sure the app is
set for the future.

Maybe, but most sensible people onm teh Atari does use C, with a
few exceptions.

> BTW: My dithering routines (and Netscape's, too!) are derived from
> the public JPEG library from the Independent JPEG Group (at least
> the default Floyd-Steinberg variant), with special optimizations
> and adaptions from my side for Atari systems :-).

So it wouldn't be totaly impossible to adapt this library to Pascal
then. It does sound a bit boring to do though and unnecessary. What
about writing it in C and then link it with the Pascal source? Isn't it
possible?

CAB could realy need some better dithering routines as it ruins such
a great program.

> Conversely, I recently contributed some algorithms to the JPEG
> code in collaboration with the organizer, which will probably
> be incorporated in the next public release. Such topics also
> seem impossible to talk about in the Atari area, unfortunately.

Great. Don't judge the Atari community to hard. There are a few
great thinkers left.

Even machines that need a boot disk have some sort of boot ROM (16K).

It still might be possible to put in a full TOS rom set.

> though...

I was able to change all of the icon names by editing the APPLICAT.RSC file, in v4.02, using ORCS. Simply open the file once running ORCS, this results in getting an icon representing the file attached to the mouse. Drop the icon on the desktop and it opens. In v4.02 the icons are in tree004, the tree whose icon is a question mark. Double click on the icon and you get a window of the basic desktop icons. Double click on any desktop icon and you can edit any part of it. Since I preferred some of the icons from v2 (IF I remember correctly and this is a BIG if) you can also copy icons from one rsc file to another. I think this works only if you replace an existing icon, but I'm not positive of this.

> If you need more information contact me at jdburr@acpu.com and I can
> be more specific.

Wouldn't need a special floppy drive chip to use high-density drives
on regular ST's? I'm just asking because I know the upgrade packages
have AJAX chips to get the increased clock speed.

If it is a matter of just having a drive and fixing a few wires, I'll
be very happy to try it out. It's very furstrating to only have to
use DD disks and the ones someone gave me are very bad...plus I can't
just reformat HD disks anymore :(

Sorry to sound "dumb" about this, but I just wanted to know a few
things first. :)

Best advice is to find out which TT030 motherboard you have before
buying a CaTTamaran.

The early TT030's, mainly A and B motherboards are real difficult to
install a CaTTamaran. Any TT motherboard after revision C is much easier
to install.

Yet, due in fact that there are several wiring options with a CaTTamaran
it is better to pay a technician with TT knowledge to install it.

I have used a professionally installed CaTTamaran for almost 3 years with a
graphics card on a revision H, TT030 motherboard. Before that I install a
CaTTamaran in a revision J TT030 motherboard. I would not go back to an
unaccelerated TT.

Hello!

I have an Atari Mega 2 ST, 2 MB, german language TOS 1.02,
AHDI (i don't know which of these things is important, and maybe
something else is more important).
From the moment i have it, I have noticed something strange:

1. If there is no disk in the floppy, after cold booting fromthe HD,
the floppy keeps on turning and te light is on until I put a diskette
into the floppy drive.
This happens always.

2. If there was a disk in the flopy,the light isn't on, but I can
hear a periodic sound that shows something is turning and it stops
when I've done some diskette operations. This happens only sometimes.

3. The third thing may be new, I just can`t remember if it was
sobefore. Sometimes (?) after a diskette error, the computer hangsup
after I choose the alert button that gives up trying. (I think that
happens no more after I deactivated some ACCs).

Does anybody know if I have to be worried?

Regards
Guentcho

[posted and mailed]

In article <33ed28b43aa6e1@post1.com>
hall@post1.com (Hallvard Tangeraas) said:-

>Well, Everest works fine when trying to write a message except for one
>minor detail.... it doesn't read the configuration file!!!

That's because of a bug in Oasis or in GFA Basic... There is a two
step solution:

- Set an environment variable EVEREST=e:\utils\texte\everest.35e\ with
the path of your Everest directory with a trailing backslash. I don't know
how to set env vars under Magic, I use Gemenv in auto folder under TOS or
the setenv statement in MINT.CNF under MultiTOS.

- Edit OASIS.PRG (first backup it!) with a binary editor, find the
sequence 2F4A 0012 (there is only one in 1.35, at +30D96) and replace it
by 42AF 0012.

This will allow Oasis to give environment variables to called progs,
like NOS, any external editor, or any other utility. I described this and
some other patches in article <853354824_OASIS_@nordnet.fr> early this
year, you should be able to find it thru DejaNews, or ask me a copy.

>-There's a file called "domain.txt" -what's this for?

It's the local cache of NOSes domain name resolver. Never touch this
file if you don't know exactly what you do... It's written by NOS, and
records there are automatically expired when needed if NOS is correctly
configured ("domain cache clean on" mode in startup.nos).

>It seems to contain a lot of phone numbers and data for UK Internet
>providers.

;-) Not phone numbers, that's IP addresses.

>How do I actually dial up my provider?

You call NOS (thru Oasis online menu, or directly by double click on
NOS.TTP) and then type "dialer pp0 dial.txt". Where pp0 is the name of
your interface (could be sl0 too) as declared in the attach statement (in
startup.nos), and dial.txt is the script... Of course this command can be
assigned to a function key, or you can even put it at the end of
startup.nos so NOS dials automatically when started.

BTW the version of NOS in the Oasis 1.35 distribution doesn't allow
mail downloading from a POP server. You should update it by NOS 0.42 POP3

at <URL:ftp://ftp.toad.net/pub/umich/Network/Ka9q/Nos/nos_pop3.zip> or any other atari.archive.umich.edu mirror. Even if you don't need POP3 you should upgrade, there are also some bugfixes: working kill file, etc...

There is also a NOS update project by Mike de Petris, now at version 0.45 (see <URL:http://www.interware.it/users/mike/>) but it is based on 0.42 without POP3 support yet... He maintains also a mailing list (and a Nest conference) on the subject.

NOS is a really powerfull tool when you learn how to use it, and the sources are available if you want to change something. Oasis 1.35 is usable, but has many bugs, is no more updated (Oasis 2.x is something else not based on NOS), doesn't respect much the RFCs, and has some really silly "features" (like for example the system clock change to GMT I hate so much I patched Oasis to stop it)... Hopefully the next version of Okami allowing operation with NOS will be available really soon now.

Bye! Bruno.

thechyld@pcc-uky.campus.mci.net (Ronald J. Hall) said:-

>Note that I had to take out the lines where Oasis "read" whatever my ISP
>sent, because it was not responding to it.

There is a little bug in the NOS dialler, it prevents detection of a
string before at least one character more is received... If you cwait
"login:" and the ISP sends "login:" only, without any space or CRLF at the
end, it wont be detected. Just cwait for "login" without trailing colon
and reception of this character will allow succesfull detection of the
string.

Bye! Bruno.

PS: Your huge sig is annoying. It's 14 lines long. We have to download it
day after day sometimes many times per day in each of your messages,
it's time and money consuming. It's generally accepted that 4 lines is
the maximum. You should read the "Emily Postnews Answers Your
Questions on Netiquette" funny document posted regularly in
news.announce.newusers. And the sig separator is not the good one:
another Oasis problem...

1757. Re: Anyone using "Oasis"? Need help setting up.

Newsgroup: comp.sys.atari.st
Date: 1997-08-11 00:00:00 UTC
From: bkozlowski@nordnet.fr
Message-ID: <871325242_OASIS_@nordnet.fr>
Source record: 118452

[Courtesy copy of this article sent to cited author via email]

In article <33ee14722010d39@post1.com>
hall@post1.com (Hallvard Tangeraas) said:-

>This is the script I've been using to log on to my provider using
>"Connect";
>(here slightly modified for PPP login and not to reveal my password ;-)
>
>waitfor "Username:"
>send ppp
>waitfor "login:"
>send hallvart
>waitfor "Password:"
>send secret_password

I'd say a good script for NOS dialler could be:

```
------ 8< ------[dial.txt]------ 8< ------
configure:
execute:
send "ATZ\r"
cwait 3000 "OK"
send "ATD1234567890\r"
cwait 45000 "CONNECT" "BUSY" "NO CARRIER"
wait 200
cwait 20000 "Username:" "NO CARRIER"
send "ppp\r"
cwait 20000 "login:"
send "hallvart\r"
cwait 20000 "Password:"
send "secret_password\r"
------ 8< ------[dial.txt]------ 8< ------
```

BTW, the login prompt is "login:" and not "Login:" with a capital?
With this script there are no auto retries if something goes wrong, you
have to fix the problem then restart the dialler command again, I prefer
it like this. But if you don't agree it's easy to make another one with a
configure section and init, dial, and retries commands. BTW2: why have you
set an "X-No-Archive: yes" field in your headers? You don't like DejaNews?

Bye! Bruno.

MiNT 1.14.2 here and... 4 MB of RAM, internet cache on MinixFS partition.

> I spend a lot of time ("the" Net is not very fast as you know, nor the

> what's happening :-(((

Just like my problem over here. CAB cache becomes confused really often.
After that CAB begins to load every page as I move around by links,
keeping just one file at a time in the cache. That's annoying feature...
even if I go backwards, the pages get loaded again. I have been thinking
about setting up a private proxy server so everything would happen at
least a little bit faster.

I would like to see the problem solved in CAB configuration though.
(talking about version 1.5 here but the version 2.0 demo does the same
thing between crashing all the time)

It still is a great program... even if it supports netscape crap commands.

Source record: 118456

It's been ages since any ATARI NEWS have been sent. If I recall well, the one they did before their last ToadFest was to be their very last one. Since then, the only thing they send is PC NEWS.

Frankly, the situation within North America is becoming rather hopeless. Toad has virtually dropped Atari (except PC emulators) while B & C was described by a friend who badly needed parts to fix his Falcon as "an Atari maniac naked amidst his collection and not wanting to part with any of it".

Systems for Tomorrow and Computer Direct try their best, but my recent problems with foreign manufacturers sending Computer Direct last year's software version instead of the latest seems to show our days are numbered. Add to this the fact that the best software is currently German, but seldom translated nor distributed here.

Looking at things dispassionately, what I fear would happen seems to be taking shape in a rather bold and invasive way:

My next computer *will* be a PissY running Winbuggs97...

Of course, if companies like Application System Hindelburg would bother translating every software, and Mausnet users participating in the more generic comp.sys.atari.st newsgroups instead of keeping all in the Mausnet family, things could have been different....

Source record: 118564

Hi,

I'm struggling with beginning to do artwork on a falcon. My previous uses (music & business stuff) all worked fine in mono or 16 color modes. So, I don't know much about doing artwork (DTP & image manipulation) in true color modes. Is there a way (without hardware modification) to achieve 80 column true color using an SVGA monitor? 40 column works but many text programs (like pagestream & steno) don't seem to work in this mode so I spend most of my time rebooting & changing configurations for different programs. Anybody know of a solution.

thanks in advance,
David Klimchak

>the old GEM.

MiNT runs fine on this Afterburner. So does AES 4.1 and NAES. What I
was refering to was the statement in the PPPKit not to let MiNT Net
multitask.
I suppose it is the way he setup the kit, I don't really
know. The way the kit tries to load "old Gem" is the problem on the
A/B because it is already taken care of with the A/B driver (as I
under stand it). I assume "old Gem" is loaded from ROM (as well as the
AES).
Now KGMD is a completely different story, and works here fine as well.

Hey Dude, is it smokin?:)

The new OVL work well here too with CAB 1.5. Much better than before.
One site I can't get to is Flinnys page (still). If I go through my
other provider (NT Server with Proxy) there ain't no site I can't
visit. Strange, but there is something different between the two
providers. I find that on the NT server, Newsie never gives me any
problems with downloading binaries, where on the Unix server, I can
only get two or three large files then the downloaded data gets messed
up. It almost looks like the Unix server is cutting me (Newsie) off in
the middle of some downloads. Usually I notice access speed down when
this occurs, but not always. Anyway the new provider gets the nod at
the end of the month for going out of his way to setup a slip
connection and giving me a few weeks free to play around. He thought

it novel that someone would want to use an Atari on the Internet:).
All I said was, send me cookies? How nice:).

Mike

Minor Nit: 19 bits gives half a meg, not a quarter.

19 address lines plus LDS/UDS gives us a total of 20 physical address bits, giving a one meg physical address limit - the same as a 68008

The 68008 was a "budget" 68000, with 8 bit data bus, 20 bit address [19 plus UDS/LDS], 32 bit registers, and was used in a British home computer in the mid/late 1980s [Sinclair QL?]

The "full" 68000 had a 16 bit data bus, 24 bit address bus [23 plus LDS/UDS] and 32 bit registers.

Software for a 68000 will run on a 68008 (albeit slower as the 68008 has to spend twice as long dragging data/instructions in from RAM than a 68000), and vice versa (68008 code will run on a 68000), The only real difference is the lower RAM limit of a 68008 and the smaller data bus.

1771. Atari ST stuff for sale

Newsgroup: comp.sys.atari.st
Date: 1997-08-11 00:00:00 UTC
From: MoZes <Stuart@planetMail.net>
Message-ID: <ant11125972bS5$W@mozyat.demon.co.uk>
Source record: 118572
Cross-posted to: comp.sys.atari.misc,comp.sys.atari.st

Hi..

Sorry if this is the wrong group, but I don't read atari newsgroups,
so I just chose 2 which I thought would be okay.

Anyway, I've been cleaning, and have come across some of my Atari
stuff sitting on the shelf.

I don't want any of these anymore;

Hisoft Devpac v3.10 - Falcon Enhanced.. never used because I didn't
have time to :-(40ukp .. it cost about 70 I
think.

Introducing Atari ST Machine code book by ZZsoft, inc disk, in good
condition.
I don't recall how much this was but 10ukp would
do.

Quartet version 1.5 - Never used either because I was sort of forced
into buying something from that bloody computer software type of
thingy..I forget its name now.. and I had to buy one thing before I
left :-(I remember Quartet was in ST format ages ago, I think
anyway. But of course, this has the manual and is in mint condition.
I don't remember how much this was either, but 10ukp should do.

STOS the game creator. I've still got the original manuals and disks
in good condition. 15ukp.

STOS's Compiler - 10ukp.

Graham Gooch's Second Innings - expansion disk, needs 1meg. 2ukp
(definatly a 1st class postage job)
This says 1mb required on it..
although I'm not sure if thats just for the Amiga version, since this
is an amiga box with an Atari ST sticker stuck over where it says
"Amiga 500/600/1200". But I'd t□just take it that it only does run
on 1meg machines.

All 4 of the Atari 1040STe 'Family Curriculum' set.
- Business Computing module
ST word - processor
ST Data - Database
ST Calc - Spreadsheet

- Play & learn module
Prof plays a new game

Prof looks at words
Prof Makes sentences

- GCSE revision module
Micro maths
French Mistress
Geography quiz

- Junior school module
Answer back junior quiz
General knowledge quiz
Spelling
Primary maths

- Creative computing module
Hyper Paint II
Music maker II
FirST basic

I can't put a rice on these because they came with the computer -
make me an offer.. I'll sell them seperaratly though unless
somevody wants the whole lot.

I also have STOS Meastro - with the sampler (plugs into the cartridge
port iirc).. although, I changed the sampler some what inside because
the connections from the input jack to the circuit board inside
actually broke.. it does work now though, well, I'm pretty sure it does,
and can test it.
I'm not sure I particularly want to sell it as I don't have any other
way of sampling anything atm, and could probably only get a couple of
ukp for it anyway, since I've fiddled with it.. but if anybody's
really desperate for a sampling unit I'll check it and sell it for a
max of 5ukp if it *does* work.

GST's First word plus.. including the big manual that comes with it..
Hell knows about a price for this one.. make an offer.

My 1040STe had 1 meg, and all of the stuff listed above does run on
it. Most also ran on my 520StFm with half a meg, before it got
diassembled to repair bits on the 1040 :-) So, it should all work on
most machines - but I don't make any guarantee.

These prices may be really over the top, but I don't know how much
each are worth these days, so make an offer. They're certainly no
use to me, as one of my STs is confined to a corner in the room,
acting as a dumb terminal to a file server, and the other is in bits
somewhere.

None of these are inc postage and packaging, but I can find out the
price of the postage if there's interest.
I'd prefer a local sale (I live near Coventry.) - as its easier for
me :-) but I don't mind posting stuff, cos I wanna get rid of it! ;-)

If you're interested in any of them, please email me, as I don't
actually subscribe to any atari groups, and don't have time to read
them ;-(

Thanks.
Stuart Winter.

Well it does still look much better than in CAB and it
doesn't have to change the palette either like CAB does.

But if you use CAB you realy should buy it, or do you just use the demo
version? And if you buy it you get the PPP layer and it's not that
expensive
if it's that important to you (which it aparently is). There will be
support
for PPP-Connect in the future if they release the docs how to use it.
You can be sure about that, or someone is realy stupied....

Well, why do I care?

1774. WebRadio content using Falcon and STarTracker based TT compatible Systems.

Newsgroup: comp.sys.atari.st
Date: 1997-08-11 00:00:00 UTC
From: Eonicman <eonicman@erols.com>
Message-ID: <33EF2A66.63A6@erols.com>
Source record: 118575

Being that Falcons with their built-in audio i/o and TT systems utilizing SoundBlasters or STarTracker cards seem to be excellent systems for creating Web based "Radio" shows would it be hard for someone to create this for playback on STe and better machines that can process 50khz sound or STs at a lower rate? Users could sell capture and support of Radio stations local to their areas around the world. Other users that have their systems set up for radio broadcasting utilizing Jingle or something else similar can setup their own web stations. This would be a nice addition to the internet capabilities of GEM compatible systems and would be a means of making money using one of the best capabilities of these systems.

I am looking for information on what other machines the ATARI family can emulate, I am NOT talking about other machines emulating the ATARI, But ATARI emulating others,

I know the Falcon has a GameBoy emulator..I saw Bubble Bobble on it:)

I think the ST has a Spectrum and maybe ATARI 2600 emulators,

I think there's something about MAC and IBM 286 being emulated maybe with hardware additions?

I really don't know.. If anyone can send me ANY information on ANY emulator available FOR the ATARI, Especially urls or your own experiences..

Many thanks :)

Cheers !ynoT (ATARI Programmer)

Yes, you would have to save the form data. And I can see your concern about lack of RAM on most Atari's for storing this data. But you could store the data on disk. Certainly most CAB users have set their Disk Cache and CAB could use some of this space to store form data, deleting it eventually just as it does all other cache data, when the form data becomes the oldest stuff in the cache.

There are some occasions where CAB creates a local HTML file in its own directory when doing something like browsing a directory. This feature could also be exteneded to cover filled in form pages, if you would prefer to attack the problem from this end rather than through the cache.

In fact, I assumed CAB was caching forms to disk, as it just makes so much sense. But I guess not, as returning to a form page certainly does not work.

Thanks for this tip. I have the same problem with a 1989 version of
Master Tracks Pro sequencer and Magic 5.

The only problem is, what do you do with LIMITMEM.TTP to use it? There
are no instructions in the Magic package. I'm no wizz with these TTP
programs.

I'd like to know where the program should be placed, and what to type
into the command line. Do I type the directory etc? How do I allocate
RAM for my programs? Drag and drop just brings up the command line...

I have a Atari 1040STf w/4 mb of ram & a 331meg hard drive. I have a couple of problems...My first one is My atari Likes to bomb out a lot. Most of the time when I exit a program....or if my computer runs for a long period of time.....I'm getting tired of rebooting all the time....I am currently running w/TOSv1.4 (rainbow) SpeedoGDOS 5, Warp 9, CPX w/the basics, and a Program to access the External Clock. I Feel that it has something to do with my RAM, TOS And my HD...I can't figure it out...I can't run NEODesk, because it bombs out a lot of programs, too much memory use...I can't run Geneva, because is slows down my computer so much....any suggestions.... I have thought it could be a Virus...but the machine is clean....ummm My ST seems to have started this problem since I upgraded it....

The other Problem has to do with my mouse....It likes to wonder by itself...I have gone through 2 mouses because I thought it was a chip problem..The second one worked fine for a few days...Is there a way I can fix this...I think this has to do with the ST and not the mouse itself.

> Glad you explained that - /but/ why, in that case, does ICDFMT, for instance,
> provide options both for formatting and partitioning a drive?

This is normal. Formatting on the Atari (regardless if you use ICDFMT,
SCSITOOL, HDDRUTIL, HDX etc.) means what DOS users call low level
formatting. Partitioning on the Atari is the same DOS users do with
using the DOS commands 'fdisk' and 'format'. These commands create and
initialize the partition information. Partitioning does the same but
faster and easier to use than 'fdisk' and 'format'.

Help! I gave away my 1040ST system last week (to a relative - or I would have kept it!). I didn't have the manual for my First Word software. Now they're having trouble printing.. and I don't remember anything about it -- also hard to troubleshoot over the phone.

If the "Print" command is greyed-out in the "File" drop-down menu, is there something I need to do to set up the printer? Do I have to use 1stPrnt.prg? It's hooked up to a Star 24-pin dot-matrix printer.

POPwatch 2.20 has just been released and is available from my web site (see sig).

POPwatch is a POP3 mail tool for use with a POP3 mailbox and Oasis1/NOS, Oasis2, and NEWSie.

The biggest change in version 2.20 is that I have almost *doubled* the download speed!!!!

Please send me any feedback you have on POPwatch :)

Regards,
Gary

I have the following items for sale.I would like to sell the complete package but I might consider breaking it up under certain circumsatances.Buyer pays shipping charges and it is already boxed a ready to ship.

*Notator Logic 2 + 2.1 upgrade disk and extra disks and manual
*Log 3 dongle (works with notator)
*1040STE/4 megs (manual and language disk)
*Atari color monitor
*60 meg mfm Hard Drive in a nice case with a fan and a recently installed new power supply.
*Atari external DD/DS disk drive
*Cartridge clock and disk
*2400 modem/Flash terminal program
The HD is loaded with shareware/freeware graphics,sequencing,word processing,utilities and more.

I have an idea of what I would like to get for it but I'll leave it open to offers.If an offer is close to my expectations then we have a deal.Thanks and please feel free to get back to me if you have any question!

>> $DFFFFF. >Regards,Meko
>>
>> It's not very clear what you intend to do, but there is alledgedly a
>> new Magnum memory board for ST only, that allows 8Mb of RAM.

More than alledged, one is installed in my STFM at this very moment (in a
Tower case).

e> It is better than that.
e>
e> It allows up to 16Mb of FAST ram. At least that is according to the
e> pages of "Woller & Link gbr" in Germany. Prices are from 209DM (�70)
e> for unfilled, to 339DM (�115) with 16MB.

This extra RAM is addressed at the same speed as the rest of RAM, at 8MHz so
that's a misnomer I'm afraid.

e> There site is at;
e>
e> http://www.inx.de/w+l/atari.htm

Or Aixit at www.aixit.com

e> However I will be buying the new 68020 accelerator from TUS if and
e> when it comes out first.

Yep, nice idea but I'm not sure about compatibility with the Magnum board,
OTOH the instructions suggest that the T36 accelerator will address the extra
RAM at 36MHz (SysSol in the UK sell the T36, pricey tho').

Speak to 'ya later!

Get a tin of Servisol (contact cleaner) and spray all the contacts in
your cables and ports - especially your mouse and HD. It stopped my
ST crashing, along with moving the HD cable away from a power cable.

MoZes <Stuart@planetMail.net> said:-

>Sorry if this is the wrong group, but I don't read atari newsgroups, so I
>just chose 2 which I thought would be okay.

Am I wrong or comp.sys.atari.misc is not an existing newsgroup? In the
list of active newsgroups found in news.list I can only see:

comp.sys.atari.8bit Discussion about 8 bit Atari micros.
comp.sys.atari.advocacy Attacking and defending Atari computers.
comp.sys.atari.announce Atari related hard/software announcements. (Moderated)
comp.sys.atari.programmer Programming on the Atari computer.
comp.sys.atari.st Discussion about 16 bit Atari micros.
comp.sys.atari.st.tech Technical discussions of Atari ST hard/software.

No comp.sys.atari.misc here, so probably it's a bogus group on your
newsserver, a mistake...

Bye! Bruno.

* 4160 STE (TOS 1.62, 4 Mb) ==>> ie: 1040 STE @ 4 Mb

* MEGA-ST 4 (TOS 1.04, 4 Mb)

* MEGAFILE 60

* SLM 804

* STM 1 Mouse

* Various DTP and Music softwares

Offers within Canada / US only! Will sell to best offer, or trade
(individual items or whole package) for either of the following:

* MEGA-STE (TOS 2.06, 4Mb Ram, Internal HD)

* STacy 4 (TOS 1.04, 4Mb Ram, Internal HD).

* Crazydots-2 graphics card for TT (or equivalent ET-4000 card)

NOTE: Nothing against our friendly neighbors from down south.
However, Canadian banks often cause troubles for cashing
foreign currency of any kind, including American.

Nonetheless, if you're interrested in trading your MEGA-STE
or your STacy, we can arrange something, as no money would
be trading hands through this deal.

More details and other selling/buying items on my homepage.

1799. MagiC & Semper

Newsgroup: comp.sys.atari.st
Date: 1997-08-12 00:00:00 UTC
From: Terry.May@rebel.ronly.org
Message-ID: <300_9708131001@ronly.org>
Source record: 118400

I'm having a problem with Semper under MagiC 5.11. It seems that whenever I boot, the first time it tries to make a call, all is well. However, after that, although the commands seem to be sent to the modem, it doesn't go off hook. But if I run another program, it kind of 'resets' Semper, and the next call again works, but only the next call. However, if I have Semper in the background while doing something fairly intensive in the foreground, Semper seems to work fine, even for multiple calls.

I never had this problem under TOS. I've changed around some of my HSMODA07 settings, but to no avail. Also, doing a Reset Modem with Semper doesn't help, either.

Any ideas?

* LED v1.51 * For a good time call 702/736-2282!

Date: 1997-08-12 00:00:00 UTC
From: wl712@freenet.Victoria.BC.CA
Message-ID: <EEtALM.9ID@freenet.victoria.bc.ca>
Source record: 118401

I have the following items for sale.I would like to sell the complete package but I might consider breaking it up under certain circumsatances.Buyer pays shipping charges and it is already boxed a ready to ship.

*Notator Logic 2 + 2.1 upgrade disk and extra disks and manual
*Log 3 dongle (works with notator)
*1040STE/4 megs (manual and language disk)
*Atari color monitor
*60 meg mfm Hard Drive in a nice case with a fan and a recently installed new power supply.
*Atari external DD/DS disk drive
*Cartridge clock and disk
*2400 modem/Flash terminal program
The HD is loaded with shareware/freeware graphics,sequencing,word processing,utilities and more.

I have an idea of what I would like to get for it but I'll leave it open to offers.If an offer is close to my expectations then we have a deal.Thanks and please feel free to get back to me if you have any question!

AFAIK, this is 'normal', happens in TOS 1.04 also.
There is a program called 'driveoff' which stops it.

> 2. If there was a disk in the flopy,the light isn't on, but I can
>hear a periodic sound that shows something is turning and it stops

Everybody who tries to build a decent application from scratch
today will encounter serious difficulties.
The Internet is a great medium to grab pieces of code and glue
them together for new or enhanced applications.
This, however, assumes that people commit to common standards
and avoid proprietary stuff.

> > Netscape, for example, could not be so powerful if it couldn't

But see what some people do: A reasonable programming environment
like Pure-C is abandoned by the developers, while at the same time
propagating a useless Pascal environment. Very strange!! And most
people don't seem to care about such odd developments. In fact,
it's no wonder why the Atari is rapidly falling behind other
systems in development with such behaviour.

I won't waste my time with Pascal adaptions! There are better things
to do (see above).

> Don't judge the Atari community to hard. There are a few

Okay, now I'm confused. I don't know of any STe's or Mega ST's that have
LAN ports. Mine certainly doesn't... Is there a way for Universal Network
to add LANs? I thought that the only way to network ST's, STe's, and Mega's
was via MIDI or cartridge port, while the Mega STe, TT030, and Falcon all
had the LAN ports... Thanks in advance for any info! :)

I think Universal Network was writen by DragonWare Software. I checked the web page and Universal Network is shown as being at version 1.02. I have version 1.09 of PowerNet that I upgraded from 1.02 of Universal Network in 1993. 1.09 supports the lan ports, the Lantech carts and midi. I have found it to be a very solid product. My only problem is it doesn't work with MiNT. Thing also causes problems.

I use a Mega ST 4 for my BBS and it does this. I always leave a blank
floppy in the drive. AFAICT, its never affected anything else... :)

> 2. If there was a disk in the flopy,the light isn't on, but I can
>hear a periodic sound that shows something is turning and it stops
>when I've done some diskette operations. This happens only sometimes.

Ditto...sometimes I can hear the drive running and just as soon as I
do anything with the drive, it stops. Again, it doesn't seem to affect
anything else so... :)

Sorry, I can't help with number 3., I've not had that happen. Anybody
else care to jump in here and help? Thanks...! :)

I'm must be missing something somewhere... How can you equate Atari computers
in the Pacific Northwest (or anywhere for that matter!) with what appears to
be sexual perversion? Please don't slander the majority of Atari users who
are, by far, typically normal, albeit on the independent and rebellious
side...!!!!

I'm probably as much a sexual deviant as anyone, but its by -choice-, not
because I endorse and use Atari computers (that only makes me enlightened!)

Tried, get to some servers then CAB comes up with an Cache error
alert. What jinx have you put on ST+19 ;--))

It's my understanding that this is Magic asking you to load a desktop,
something's crashed your system and it can't find either Magicdesk or
whatever replacement you've specified.

Speak to 'ya later!

S>> if the fabled Magcic XFS would help him.
SD> Hmmm, possible though I have never heard of it.

It was my understanding (based on a very poor knowledge of German I have to
say) that you needed MetaDOS installed to use this driver.

I'm willing to be persuaded otherwise.

Speak to 'ya later!
